

Forest Service**Intergovernmental Advisory Committee Subcommittee Meeting****AGENCY:** Forest Service, USDA.**ACTION:** Notice of Meeting.

SUMMARY: The Intergovernmental Advisory Committee will meet on June 17, 1996, at the Robert Duncan Plaza Building, 333 SW First Ave., Portland, Oregon 97208 in Rooms 3A and 3B on the 3rd floor. The purpose of the meeting is to continue discussions to identify issues and solutions to improve the implementation of the Northwest Forest Plan (NFP) and in particular to focus on better ways to integrate the ecological and economic aspects of the NFP. The meeting will begin at 9:00 a.m. on June 17 and continue until 5:00 p.m. Agenda items to be discussed include, but are not limited to: (1) issues which impede the efficient implementation of the NFP, (2) recommendations to resolve the issues, and (3) identification of procedures to implement recommendations. The IAC meeting will be open to the public and is fully accessible for people with disabilities. Interpreters are available upon request in advance. Written comments may be submitted for the record at the meeting. Time will also be scheduled for oral public comments. Interested persons are encouraged to attend.

FOR FURTHER INFORMATION CONTACT: Questions regarding this meeting may be directed to Don Knowles, Executive Director, Regional Ecosystem Office, 333 SW 1st Avenue, P.O. Box 3623, Portland, OR 97208 (Phone: 503-326-6265).

Dated: May 29, 1996.

Donald R. Knowles,

Designated Federal Official.

BILLING CODE 3410-11-M

Natural Resources Conservation Service**Changes in Hydric Soils of the United States****AGENCY:** Natural Resources Conservation Service (formerly the Soil Conservation Service), USDA.**ACTION:** Notice of change.

SUMMARY: Pursuant to 7 CFR 12.31(a)(3)(i), the Natural Resources Conservation Service, United States Department of Agriculture gives notice of a change in the Hydric Soils of the United States as listed in the third

edition of the Hydric Soils of the United States, Miscellaneous Publication 1491, USDA, Soil Conservation Service, June 1991.

FOR FURTHER INFORMATION CONTACT: P. Michael Whited, Chair, National Technical Committee for Hydric Soils, NRCS Wetland Institute, USDA-NAC, East Campus-UNL, Lincoln, NE 68583-0822.

SUPPLEMENTARY INFORMATION: The third edition of the Hydric Soils of the U.S. was published in June 1991, and a notice of change published in the Federal Register, October 11, 1991, Vol. 56, No. 198, page 51371. Changes to this document were made in 1993 and published in the Federal Register October 6, 1993, Vol. 58, No. 192, page 52078. Further changes were made in 1994 and published in the Federal Register July 13, 1994, Vol. 59, No. 133, page 35680. The changes published herein reflect soils added and deleted since the 1994 Federal Register notice.

The national list of hydric soils changes as additional soil series are recognized and defined and/or properties of existing soil series are updated based on additional data. These changes reflect refinements in knowledge of the soils of the United States. New soil series are recognized as soils are mapped in previously unmapped areas. These new series have always met the hydric criteria, whether recognized as series or not, and thus represent an insignificant change in acreage of hydric soils. Soils that are removed from the list are mostly dry phases of existing hydric soils. These dry phases would not have met wetlands hydrology criteria, thus represent an insignificant change in acreage of wetlands.

The hydric soils list is computer generated using the hydric soil criteria and a database of properties of each soil series in the U.S. The current hydric soil criteria was published in the Federal Register February 24, 1995, Vol. 60, No. 37, page 10349. The database is also used to generate interpretations of how soils perform for many land uses. Therefore, some changes in the list of hydric soils result from adding phases for a hydric soil to refine other interpretations. This split or addition of a hydric phase causes an increase in the number of hydric soils, but does not affect the acres of the hydric soil. Data for all soil series are in the Soil Interpretations Record and may be reviewed by contacting a local office of the Natural Resources Conservation Service in the appropriate state.

Dated: May 6, 1996.

Norman C. Melvin III,

Plant Ecologist, Wetland Institute.

Richard W. Arnold,

Director, Soils Division.

Briefing Paper, National List of Hydric Soils: Prepared by: P. Michael Whited, April 1996.

Background

—The National List of Hydric Soils is:

- Published by the Natural Resources Conservation Service.
- Revised annually and notice is filed in the Federal Register.
- Generated from Soil Interpretations Records in the National Soil Database.

—The National Technical Committee for Hydric Soils reviews and concurs with changes to the National List of Hydric Soils.

—The Soil Interpretations Records for soil series are:

- Continuously updated as data is collected on soil properties.
- Reviewed by the soil survey Staff at MLRA Soil Survey Regional Offices.
- Used in all aspects of the National Soil Survey Program of which soils are a small part.

Reasons for Changes in the Hydric Soil List

—Addition of new soil series due to:

- Newly mapped areas (soils have always been hydric but have not been previously recognized as soil series).
 - Narrowing of an existing series into two soils. An example being a series that is both hydric and nonhydric being split into their respective parts.

—Result from new phases being added to an existing soil series. Phases are added for many reasons and include:

- Flooding and ponding phases of which some may be hydric and others nonhydric. Many of these changes are made to accommodate nonhydric interpretations of soil use.
- Surface texture or depth phases both of which are not related to change in hydric soil status but are needed for other interpretations.

- Wetness or water table phases of which some may be hydric and others nonhydric. Some of these changes are made to accommodate other interpretations of soil use.
- Result from change in flooding, ponding, water table, or drainage class as a result of new information. Soils are added or deleted from the list due to these changes.

Summary of Changes From 1994 National List

—287 entries (soils) added of which:

- 105 are new soil series established from new soil mapping. These areas of hydric soils which are given new names are previously unmapped and thus have not affect on acres of hydric soils.

- 120 are phases of existing hydric soils. These are new phase names for existing hydric soils and thus have no affect on acres of hydric soils.

- 41 were changed from nonhydric to hydric based on updated technical information such as: water table depth, or flooding/ponding duration.

- 13 series were split—hydric phases were established for soils that previously would have been both hydric and nonhydric. The whole series may have been considered as hydric previously, but the nonhydric part

would not have met the hydric soil criteria. Because only part of the original series met the hydrology criteria, this change has little affect on acres of wetlands.

- 8 series were added because Soil Interpretations Record numbers were changed for administrative purposes. These same soils appear on the change list as deletions, thus there is no affect on the acres of hydric soils.

—25 entries (soils) were deleted of which:

- 3 series were split into nonhydric and hydric phases. The hydric phases appear on the list as additions, thus there is no affect on the acres of hydric soils.

- 6 series interpretation records were dropped due to non-use. The central concepts of these soils have been incorporated into other soil series, thus there is no affect on the acres of hydric soils.

- 8 series were deleted because Soil Interpretations Record numbers were changed for administrative purposes. These same soils appear on the change list as additions, thus there is no affect on the acres of hydric soils.

- 8 series were deleted based on updated technical information. These have been borderline hydric soils and would not have met wetland hydrology criteria. The changes slightly reduces the acres of hydric soils.

SIR No.	Soil series	Reason

Soils Added to the National List of Hydric Soils in 1995 Justification

CO3592	Acasco, gravelly substratum	New phase of existing hydric soil.
TN0230	Agee, frequent flooding	New phase of existing hydric soil.
UT1928	Airport, wet	Updated technical information.
CO4667	Alamosa, clayey substratum	New phase of existing hydric soil.
CO3741	Alamosa, stratified substratum	New phase of existing hydric soil.
CO3509	Alamosa, warm	New phase of existing hydric soil.
MT1496	Albicalis	New soil series.
CO3894	Almont, cool	New phase of existing hydric soil.
CO3860	Antero, stratified	New phase of existing hydric soil.
AK0501	Aquatna	New soil series.
UT2092	Arave, silty substratum	Updated technical information.
SD0579	Arlo, very poorly drained	New phase of existing hydric soil.
CA2585	Arlinda	New soil series.
CA2581	Artray, flooded	New phase of existing hydric soil.
CA7070	Artray, high elevation	New phase of existing hydric soil.
MT1485	Bandy	New soil series.
MT1653	Bandy, occasionally flooded	New soil series.
TX1280	Barnett	New soil series.
TX1281	Barnett, overwash	New soil series.
NE0153	Barney, loamy surface	New phase of existing hydric soil.
NE0154	Barney, loamy, wet	New phase of existing hydric soil.
MT1617	Barzee	New soil series.
CA2586	Bayside, very poorly drained	New phase of existing hydric soil.
CO4140	Big Blue, cool	New phase of existing hydric soil.
CO3600	Big Blue, mottled subsoil	New phase of existing hydric soil.
IL0463	Birds, undrained	New phase of existing hydric soil.
ID1897	Blackwell, cool	New phase of existing hydric soil.
MT1273	Blossberg	New phase of existing hydric soil.
MN0808	Blue Earth, ponded	Updated technical information.
MT1505	Bonebasin	New phase of existing hydric soil.
MT1654	Bonebasin, occasionally flooded	New soil series.
MO0355	Booker, poorly drained	New phase of existing hydric soil.
MD0170	Boxiron	New soil series.
OR0782	Bragton	New soil series.
IL0464	Brooklyn, undrained	New phase of existing hydric soil.
ME0143	Bucksport, ponded	New phase of existing hydric soil.
CA2759	Burman, moderately deep	New soil series.
CA2760	Burman, occasionally flooded	New soil series.
UT1930	Cache, wet	Updated technical information.
IA0185	Calco, ponded	Updated technical information.
IA0312	Calcousta	Updated technical information.
MT1406	Canarway	New soil series.
MT1432	Canarway, heavy metals	New soil series.
UT4240	Canburn, stratified	Updated technical information.
MI0687	Cathro, very bouldery	New phase of existing hydric soil.
MN0752	Cedarrock	New soil series.
CO3862	Chaffee, stratified	New phase of existing hydric soil.
MN0768	Chaska, channeled	New phase of existing hydric soil.
SC0152	Chastain, ponded	New phase of existing hydric soil.
MN0748	Chetomba	New soil series.

SIR No.	Soil series	Reason
GU0318	Chia	Record # changed, old # appears as deletion.
ID1924	Chickreek, flooded	New phase of existing hydric soil.
SD0327	Clamo, gravelly substratum	New phase of existing hydric soil.
SD0389	Clamo, loamy substratum	New phase of existing hydric soil.
SD0542	Clamo, poorly drained	New phase of existing hydric soil.
OR1599	Clawson, high precipitation	New phase of existing hydric soil.
CA2703	Clear Lake MAP>20	New phase of existing hydric soil.
MT1500	Clunton	New soil series.
MT1557	Clunton	New soil series.
CA2521	Columbia, channeled	New phase of existing hydric soil.
CA2519	Columbia, frequently flooded	New phase of existing hydric soil.
MT1501	Cometcrik	New soil series.
CA2680	Corbiere, frequently flooded	New hydric phase of existing non-hydric soil.
MD0180	Corsica	New soil series.
MN0688	Corvuso	New soil series.
MN0676	Cosmos	New soil series.
OR1602	Cove, rarely flooded	New phase of existing hydric soil.
MN0691	Crowriver	New soil series.
UT2093	Cudahy, clayey substratum	Updated technical information.
UT1980	Cudahy, wet	Updated technical information.
OK0241	Cupco	Updated technical information.
GU0323	Dechel	Record # changed, old # appears as deletion.
MI0736	Deford, mucky surface	New phase of existing hydric soil.
CA2509	Dello	New soil series.
IL0465	Denny, undrained	New phase of existing hydric soil.
MN0713	Dora, ponded	New phase of existing hydric soil.
TX1243	Dreka	Updated technical information.
MT1520	Dunkleber	New soil series.
CO3638	Eachuston, short FFS	New phase of existing hydric soil.
SD0590	Egas, poorly drained	New phase of existing hydric soil.
MN0753	Egglake, depressional	New phase of existing hydric soil.
IL0456	Elpaso	New soil series.
CA2704	Esquon, MAP>20	New soil series.
TX1265	Estes, occasionally flooded	New phase of existing hydric soil.
OK0356	Ezell	Updated technical information.
MN0767	Faxon, soft bedrock	New phase of existing hydric soil.
MT1478	Finn	New soil series.
MT1477	Foolhen	New soil series.
MN0692	Forestcity	New soil series.
IA0669	Forney, dry	Updated technical information.
MN0718	Foxlake	New soil series.
TX0911	Franeau	New soil series.
NE0183	Gannet, poorly drained	New phase of existing hydric soil.
NE0192	Gannet, very poorly drained	New phase of existing hydric soil.
CO4412	Gas Creek, cobbley	New phase of existing hydric soil.
CO4155	Gas Creek, cool	New phase of existing hydric soil.
CO3870	Gas Creek, gravelly	New phase of existing hydric soil.
MI0691	Gay, very stony	New phase of existing hydric soil.
CO3590	Gerrard, loamy	New phase of existing hydric soil.
C04692	Gerrard, thick surface	New phase of existing hydric soil.
PA0172	Gleneyre	New soil series.
C04157	Gold Creek, cool	New phase of existing hydric soil.
NE0419	Gothenburg, loamy	New phase of existing hydric soil.
ID1906	Grasshopper	New soil series.
PR0102	Guayabota	Updated technical information.
C03513	Hagga, loamy surface	New phase of existing hydric soil.
AK0402	Haggard	New soil series.
IA0643	Harps	Updated technical information.
IA0671	Harps, dry	Updated technical information.
IA0681	Harps, stratified substratum	New phase of existing hydric soil.
WI0546	Hegge	New soil series.
NE0513	Histosols	New phase of existing hydric soil
IA0213	Holly Springs, Low PPT	Updated technical information.
AK0404	Hufman	New soil series.
MT1514	Iffgulch	New soil series.
GU0324	Ilachetomel	Record # changed, old # appears as deletion.
MD0173	Indiantown	New soils series.
GU0353	Inkosr	Record # changed, old # appears as deletion.
GU0354	Insak	Record # changed, old # appears as deletion.
CO4185	Irim, cool	New phase of existing hydric soil.
CO4413	Irim, gravelly	New phase of existing hydric soil.
MI0694	Jacobsville, stony	New phase of existing hydric soil.
MI0693	Jacobsville, very stony	New phase of existing hydric soil.
SD0486	James, very poorly drained	New phase of existing hydric soil.

BILLING CODE 3410-16-M**Rural Utilities Service****Electric Borrowers Exempt From Certain RUS Operational Controls Under Section 306E of the RE Act**

AGENCY: Rural Utilities Service, USDA.
ACTION: Notice and list of electric borrowers exempt from certain RUS operational controls under section 306E of the RE Act.

SUMMARY: Section 306E of the Rural Electrification Act of 1936, as amended (7 U.S.C. 936e) directs the Administrator of the Rural Utilities Service (RUS) to minimize RUS approval rights, requirements, restrictions, and prohibitions imposed on operations of electric borrowers whose net worth exceeds 110 percent of the outstanding loans made or guaranteed to the borrower by RUS. This notice lists the borrowers that meet this test.

DATES: These exemptions are effective beginning June 7, 1996.

FOR FURTHER INFORMATION CONTACT: General information about this notice is available from Sue Arnold, Financial Analyst, U.S. Department of Agriculture, Rural Utilities Service, room 2230-s, 14th Street & Independence Avenue, SW. AgBox 1522, Washington, DC 20250-1522. Telephone: 202-720-0736. FAX: 202-720-4120. E-mail: Sarnold@rus.usda.gov.

Individual borrowers may obtain information specific to their companies from the Director of the appropriate Regional Office, or from the Director, Power Supply Division.

SUPPLEMENTARY INFORMATION: Section 306E of the Rural Electrification Act of 1936, as amended (7 U.S.C. 936e) directs the Administrator of the Rural Utilities Service (RUS) to minimize RUS approval rights, requirements, restrictions, and prohibitions imposed on operations of electric borrowers whose net worth exceeds 110 percent of the outstanding loans made or guaranteed to the borrower by RUS. RUS regulations implementing Section 306E, including the method of calculating the ratio, are published at 7 CFR 1710.7. As amended December 29, 1995, at 60 FR 67396, these regulations require RUS to notify borrowers in writing as whether they qualify for exemption.

Pursuant to 7 CFR 1710.7, the following electric borrowers will be exempted from approval rights,

requirements, restrictions, and prohibitions imposed on operations of electric borrowers listed in the rule.	GA 91 GA 95 GA 97 GA 98 IA 05 IA 30 IA 31 IA 32 IA 33 IA 34 IA 36 IA 40 IA 50 IA 51 IA 52 IA 56 IA 57 IA 67 IA 69 IA 70 IA 74 IA 82 IA 92 IA 94 IA 95 ID 16 ID 17 ID 19 ID 23 IL 02 IL 07 IL 08 IL 32 IL 34 IL 37 IL 39 IL 40 IL 43 IL 45 IL 48 IN 01 IN 07 IN 08 IN 09 IN 14 IN 18 IN 26 IN 27 IN 29 IN 32 IN 35 IN 37 IN 38 IN 40 IN 41 IN 42 IN 47 IN 52 IN 55 IN 60 IN 70 IN 81 IN 83 IN 87 IN 89 IN 92 IN 99 IN 100 IN 108 IN 109 KS 13 KS 15 KS 18 KS 21 KS 22 KS 30
The exemption will apply until the borrower is notified in writing by RUS.
