## Department of the Navy

### Revised Record of Decision on the Upgrade of the Wastewater Treatment System at Marine Corps Base, Camp Lejeune, NC

Pursuant to Section 102(c) of the National Environmental Policy Act (NEPA), and the Council on Environmental Quality Regulations (40 CFR parts 1500-1508), the Department of the Navy announced, on August 8, 1994, its decision to upgrade the wastewater treatment system at Marine Corps Base (MCB) Camp Lejeune, North Carolina. The upgrade involves removing three discharge points from the most nutrient sensitive waters of the upper New River, removing two discharge points in proximity to high quality shellfishing waters of the lower New River, and removing a discharge point to the Atlantic Intracoastal Waterway at Onslow Beach. The first phase requires construction of approximately 35 miles of new wastewater transmission pipelines, and consolidates flows at an outfall located in the New River near the existing Hadnot Point treatment plant. Phase I also includes construction of rapid infiltration system facilities at Onslow Beach to handle 120,000 gallons per day (gpd) of wastewater currently discharged to the Atlantic Intracoastal Waterway. Phases II and III involve construction of a new 15 million gallons per day (MGD) advanced wastewater treatment plant capable of a high degree of nutrient removal, and a new outfall diffuser pipe located about 13 miles upstream from the mouth of the New River. The new advanced wastewater treatment plant will be in operation by December 31, 1998.
