#### SUPPLEMENTARY INFORMATION:

##### I. Background

The sinking of slopes and shafts is a particularly hazardous operation where conditions change drastically in short periods of time. Explosive methane and other harmful gases can be expected to infiltrate the work environment at any time. The working environment is typically a confined area in close proximity to moving equipment. Mandatory safety standard 30 CFR 77.1901 requires coal mine operators to conduct examinations of slope and shaft areas for hazardous conditions, including tests for methane and oxygen deficiency, within 90 minutes before each shift and once during each shift, and before and after blasting. The surface area surrounding each slope and shaft is also required to be inspected for hazards.

The standard also requires that a record be kept of the results of the inspections. The record consists of a description of any hazardous condition found and the corrective action taken to abate it. The record is necessary to ensure that the inspections and tests are

conducted in a timely fashion and that corrective action is taken when hazardous conditions are identified. The record is maintained at the mine site for the duration of the operation.

##### II. Current Actions

MSHA proposes to continue the information collection requirement related to records of preshift and onshift inspections of slope and shaft areas for an additional 3 years. MSHA believes that eliminating this requirement would expose miners to unnecessary risk of injury or death. The records are used by slope and shaft supervisors and employees, State mine inspectors, and Federal mine inspectors. The records show that the examinations and tests were conducted and give insight into the hazardous conditions that have been encountered and those that may be encountered. The records of inspections greatly assist those who use them in making decisions that will ultimately affect the safety and health of slope and shaft sinking employees.

*Type of Review:* Reinstatement without change.

*Agency:* Mine Safety and Health Administration.

*Title:* Records of Preshift and Onshift Inspections of Slope and Shaft Areas.

*OMB Number:* 1219-0082.

*Recordkeeping:* Records are required to be kept for the duration of the operation.

*Affected Public:* Business or other for-profit institutions.

*Cite/Reference/Form/etc.:* 30 CFR 77.1901.

*Total Respondents:* 30.

*Frequency:* Twice per shift.

## NUCLEAR REGULATORY COMMISSION

### Agency Information Collection Activities: Proposed Collection; Comment Request

**AGENCY:** U.S. Nuclear Regulatory Commission (NRC).

**ACTION:** Notice of pending NRC action to submit an information collection request to OMB and solicitation of public comment.

**SUMMARY:** The NRC is preparing a submittal to OMB for review of continued approval of information collections under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

Information pertaining to the requirement to be submitted:

1. *The title of the information collection:* NRC Form 398, "Personal Qualification Statement—Licensee."
2. *Current OMB approval number:* 3150-0090.
3. *How often the collection is required:* On occasion and every six years (at renewal).

4. *Who is required or asked to report:* Individuals requiring a licensee to operate the controls at a nuclear reactor.

5. *The number of annual respondents:* 1,660 annually.

6. *The number of hours needed annually to complete the requirement or request:* 1,730; approximately 1.04 hours per response.

7. *Abstract:* NRC Form 398 requests detailed information that should be submitted by a licensing candidate when applying for a new or renewal license to operate the controls at a nuclear reactor facility. This information, once collected, would be used for licensing actions and for generating reports on the Operator Licensing Program.

Submit, by July 28, 1997, comments that address the following questions:

1. Is the proposed collection of information necessary for the NRC to properly perform its functions? Does the information have practical utility?
2. Is the burden estimate accurate?
3. Is there a way to enhance the quality, utility, and clarity of the information to be collected?
4. How can the burden of the information collection be minimized, including the use of automated collection techniques or other forms of information technology?
