Proposed Projects

1. The purpose of this study is to evaluate the reliability and validity of existing instruments that measure stress and stressful life events in black women of reproductive age. Eligible subjects will be black women who live in the Atlanta metropolitan area. Subjects will be recruited from flyers, newspaper announcements, hospitals and clinics in the metropolitan Atlanta area. Subjects will be screened and selected based on age (18-30 or 31-45 years), years of education (12, 13-15, 16 or more), and pregnancy status (pregnant, not pregnant). A maximum of thirty women will be selected for each combination of age, education and pregnancy status. The minimum age for participation will be 18 to avoid the complications due to requirement of parental consent. Women will be excluded if they use illicit drugs, such as heroin, cocaine and marijuana because these substances may alter the metabolism of cortisol. The contact, timing and spacing of the interviews and laboratory collection are based on the methodology developed and used for conducting reliability and validity tests. Approximately one half of the women will be pregnant at the time of data collection.

Women enrolled in the study respond to a series of face-to-face and self-administered demographic and psychosocial questionnaires. Women are also asked to provide a saliva sample so that we can correlate reported levels of stress with biological measures of stress.

Participation in this study is voluntary and participants will receive compensation of \$35 for their time. A
