

or before December 1, 1997. APHIS received no comments on the subject petition during the designated 60-day comment period.

Analysis

Event T45 canola has been genetically engineered to contain a *pat* gene derived from *Streptomyces viridochromogenes*. The *pat* gene encodes the enzyme phosphinothricin-N-acetyltransferase (PAT), which confers tolerance to the herbicide glufosinate. Expression of the *pat* gene is controlled by a 35S promoter and terminator derived from the plant pathogen cauliflower mosaic virus. The *Agrobacterium tumefaciens* method was used to transfer the added genes into the parental cultivar *B. napus* var. AC EXCEL.

The subject canola has been considered a regulated article under APHIS' regulations in 7 CFR part 340 because it contains gene sequences derived from plant pathogens. However, evaluation of field data reports from field tests of this canola conducted under APHIS permits since 1996 indicates that there were no deleterious effects on plants, nontarget organisms, or the environment as a result of the environmental release of event T45 canola.

Determination

Based on its analysis of the data submitted by AgrEvo, and a review of other scientific data and field tests of the subject canola, APHIS has determined that event T45 canola: (1) Exhibits no plant pathogenic properties; (2) is no more likely to become a weed than canola developed by traditional breeding techniques; (3) is unlikely to increase the weediness potential for any other cultivated or wild species with which it can interbreed; (4) will not cause damage to raw or processed agricultural commodities; and (5) will not harm threatened or endangered species or other organisms, such as bees, that are beneficial to agriculture. Therefore, APHIS has concluded that the subject canola and any progeny derived from hybrid crosses with other nontransformed canola varieties will be as safe to grow as canola in traditional breeding programs that are not subject to regulation under 7 CFR part 340.

The effect of this determination is that AgrEvo's event T45 canola is no longer considered a regulated article under APHIS' regulations in 7 CFR part 340. Therefore, the requirements pertaining to regulated articles under those regulations no longer apply to the subject canola of its progeny. However, importation of the subject canola or seeds capable of propagation are still

subject to the restrictions found in APHIS' foreign quarantine notices in 7 CFR part 319.

National Environmental Policy Act

An environmental assessment (EA) has been prepared to examine the potential environmental impacts associated with this determination. The EA was prepared in accordance with: (1) The National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321 *et seq.*), (2) regulations of the Council on Environmental Quality for implementing the procedural provisions of NEPA (40 CFR parts 1500–1508), (3) USDA regulations implementing NEPA (7 CFR part 1b), and (4) APHIS' NEPA Implementing Procedures (7 CFR part 372). Based on that EA, APHIS has reached a finding of no significant impact (FONSI) with regard to its determination that AgrEvo's event T45 canola and lines developed from it are no longer regulated articles under its regulations in 7 CFR part 340. Copies of the EA and the FONSI are available upon request from the individual listed under **FOR FURTHER INFORMATION CONTACT**.
