##### II. Reregistration Eligibility Decision

The Agency has issued a Reregistration Eligibility Decision (RED) document for the pesticidal active ingredient iprodione. Under the Federal Insecticide, Fungicide, and Rodenticide Act, as amended in 1988, EPA is conducting a reregistration program to reevaluate existing pesticides to make sure they meet current scientific and regulatory standards. The data base to support the reregistration of iprodione is substantially complete.

To lessen human health risk, residential risk, worker risk, and ecological effects posed by iprodione, Rhone-Poulenc Ag Co., the current manufacturer of iprodione, has proposed to implement a series of risk mitigation measures based on the Agency's risk assessment, as discussed in the Iprodione RED. These mitigation measures include:

Proposed cancellation by Rhone-Poulenc of all residential uses of iprodione.

For iprodione use on strawberries, increase the pre-harvest interval from 0-days to up to but not after first flower. In addition, the tolerance for strawberries will be reduced to the limit of quantitation (0.05 parts per million (ppm)).

For iprodione use on all stone fruit (apricots, cherries, nectarines, plums, and prunes), increase the pre-harvest interval from 7-days to up to but not after petal fall (approximately 45 - 90-day pre-harvest interval). In addition, the tolerances for all stone fruit, including peaches, will be reduced to limit of quantitation (0.05 ppm).

For iprodione use on table grapes (fresh, cooked, canned, juice, raisin or

otherwise; mitigation does not include wine and sherry grapes), reduce the application rate from 4 times per season to one application per season at early-to mid-bloom. Tolerances remain unchanged consistent with the RED (10 ppm).

Limit the maximum number of applications on non-residential turf, lawn, golf course, ornamental trees, and ornamental plants from "unlimited" to 6 per year, with the maximum annual application of up to but no more than 24 pounds (lbs.) active ingredient (a.i.).

Proposed cancellation by Rhone-Poulenc of all herbaceous ornamental seed treatment uses of iprodione.

The Agency intends to publish in the near future a 6(f) FR Notice announcing those canceled iprodione uses. The Agency has determined that all remaining uses of iprodione are eligible for reregistration subject to certain other conditions imposed in the RED.

All registrants of products containing the above listed active ingredient have been sent the Iprodione RED document and must respond to labeling requirements and product specific data requirements (if applicable) within 8 months of receipt. Products containing other active ingredients will not be reregistered until those other active ingredients are determined to be eligible for reregistration.

The reregistration program is being conducted under congressionally mandated time frames, and EPA recognizes both the need to make timely reregistration decisions and to involve the public. Therefore, EPA is issuing this RED as a final document with a 60-day comment period. Although the 60-day public comment period does not affect the registrant's response due date, it is intended to provide an opportunity for public input and a mechanism for initiating any necessary amendments to the RED. All comments will be carefully considered by the Agency.

## I. What are the details of the submissions?

Test data for DGEBA were submitted by the Society of the Plastics Industry, Inc. Epoxy Resin Systems Task Group. The reports were submitted pursuant to a TSCA section 4 enforceable testing consent agreement/order at 40 CFR 799.5000. EPA received the data on September 29, 1998. The submission includes two final reports entitled 1) "DGEBA: Two-Year Dermal Chronic Toxicity/Oncogenicity Study in the Male B6C3F1 Mouse," and 2) "DGEBA: Two-Year Dermal Chronic Toxicity/Oncogenicity Study in Female Fischer 344 Rats." Also submitted was an independent pathology peer review of the "DGEBA: Two Year Dermal Chronic Toxicity/ Oncogenicity Study in Female F344 Rats." This peer review was sponsored by the Society of the Plastics Industry, Inc. Epoxy Resin Systems DGEBA Task Force. This chemical is used primarily as the principal component in epoxy resins.

Test data for Phenol were submitted by the Phenol Regulatory Panel of the Chemical Manufacturers Association (CMA) pursuant to a TSCA section 4 enforceable testing consent agreement/order at 40 CFR 799.5000. EPA received the data on October 15, 1998. The submission includes a final report entitled "A 13-Week Neurotoxicity Study of Phenol Administered in the Drinking Water to the Rat." This chemical is produced in substantial quantities and is used in numerous consumer products.

EPA has initiated its review and evaluation process for these data submissions. At this time, the Agency is unable to provide any determination as to the completeness of the submissions.
