After the nahcolite is removed from the ground, it would be processed into a sodium carbonate solution and transported by a 44-mile pipeline south to a processing operation to be located at an existing industrial site in the Parachute Valley in Garfield County, Colorado. There it would be further processed to commercial grade sodium carbonate, sodium bicarbonate, and other sodium products which would then be shipped from the processing facility via a 4-mile long dedicated rail spur to an interstate rail connection near the town of Parachute.
