

revisions resulted in no changes in the saltwater criterion maximum concentration (CMC or "acute criterion") or the saltwater criterion continuous concentration (CCC or "chronic criterion"), but did result in significant changes in the freshwater CMC and CCC.

The freshwater CMC changed due to several factors including the addition of data for bull trout and rainbow trout, the elimination of some data and the recalculation of species mean acute values (SMAVs) for a few species. Two SMAVs were recalculated based on all applicable data rather than only giving preference to flow-through measured test results, as in the draft.

EPA's freshwater metals criteria are expressed as hardness dependent values

because water quality characteristics such as hardness (and other parameters that covary with hardness) influence the toxicity of metals on aquatic organisms. Therefore, hardness slopes were established to normalize all freshwater acute and chronic values to the same hardness in order to derive the criteria. These hardness slopes were revised in the completed document. The revision to the acute slope was minor, but the chronic slope revision was more significant and resulted in a less stringent CCC compared to the draft document. The revised CCC, however, is still more stringent than EPA's 1995 CCC.

A number of comments were received stating that EPA should not proceed with the cadmium update until the

biotic ligand model (BLM), a model that estimates the bioavailable portion of dissolved metals in the water column based on site-specific water quality parameters such as alkalinity, pH and dissolved organic carbon, is available for cadmium. To date, EPA has not completed any BLM criteria and is still in the preliminary evaluation phase of the model for cadmium and so does not agree that the update should wait for the development of the BLM. The cadmium criteria may be revised in the future based on the BLM, yet development is contingent upon resources and sufficient data being available to develop the model.

What Are the New Criteria?
