

Notification to Interested Parties

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of the antidumping duties occurred and the subsequent assessment of double antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective orders (APOs) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305, that continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

This determination is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: May 31, 2001.

Steelhead (*O. mykiss*): Threatened LCR; Threatened Middle Columbia River (MCR); and Threatened UWR.

New Applications Received

The USGS is seeking a 5-year permit (1317) to take (capture and handle) juvenile MCR steelhead during scientific research efforts on the Toppenish National Wildlife Refuge (TNWR), Toppenish Creek, WA. Toppenish Creek is a tributary of the Yakima River. The purpose of the study is to determine whether juvenile MCR steelhead are entering the TNWR's wetland management units during the spring flooding of Toppenish creek and becoming trapped there—thus becoming vulnerable to avian predators, high summer water temperatures, and stranding. The study will benefit MCR steelhead by showing whether they are straying into the wetland management units and managing to escape back to Toppenish Creek to continue their downstream migration. If the juvenile MCR steelhead are being trapped in the management units by falling water levels, the study will also be used to help guide TNWR operations so that the fish are less likely to be harmed in the future. The USGS proposes to capture, handle, and release juvenile MCR steelhead. Baited minnow traps will be the primary capture method, but fyke nets or electrofishing may be used if the traps are not successful.

The ODFW is seeking a 5-year permit (1318) to annually take LCR chinook salmon, UWR chinook salmon, Oregon Coast coho salmon, LCR steelhead, and UWR steelhead during the course of conducting five separate scientific research projects. Only juveniles will be taken in these projects—except for
