**Species Covered in This Notice**

The following species are covered in this notice:

*Sea turtles*

Threatened and endangered Green turtle (*Chelonia mydas*)

Endangered Hawksbill turtle (*Eretmochelys imbricata*)

Endangered Kemp's ridley turtle (*Lepidochelys kempi*)

Threatened Loggerhead turtle (*Caretta caretta*)

**Permits, Modified Permits and Amended Permits Issued***Permit #1316*

Notice was published on May 21, 2001 (66 FR 27940), that Dr. Jeff Schmid, Conservancy of Southwest Florida applied for a scientific research permit (1316). The goal of this research is to characterize the essential habitat associations of subadult Kemp's ridley turtles in the nearshore waters of the upper Ten Thousand Islands. The objectives are: (1) to monitor the movements of Kemp's ridley turtles via radio and sonic telemetry and to quantify their habitat utilization from the geographical position data, (2) to produce a geographic information system (GIS) database of benthic habitats and subsequently map the habitat types within the study area, and (3) to test for habitat preferences of Kemp's ridley turtles in this region by comparing the amount of time a turtle spends in a given habitat relative to the availability of all other habitat types. Permit 1316 authorizes the non-lethal take of 20 Kemp's ridley turtle. After capture, the turtles will be handled, measured, flipper and PIT tagged, have a radio/sonic transmitter attached and be released near the capture site. Permit 1316 was issued on July 19, 2001, and expires July 31, 2006.

*Permit #1299*

Dr. Raymond Carthy, of the Florida Cooperative Fish & Wildlife Research

Unit currently possesses a 3-year scientific research permit to non-lethally take up to 100 loggerhead, 100 green, and 100 Kemp's ridley sea turtles annually from St. Joseph Bay, Florida. Under permit #1299, Dr. Carthy is authorized to examine the interesting movements and habitat usage of adult loggerhead turtles along the northwestern coast of Florida, while also examining species composition, population densities and habitat utilization in coastal bays in the same area. Activities currently authorized under permit #1299 are: capture of turtles in tended, straight-set, large-mesh tangle nets. After capture turtles are weighed, measured, photographed, and flipper and PIT tagged, have a tissue sample collected and be released.

For modification #1, the permit holder is authorized to attach a time/depth recorder and a sonic/radio transmitter to a maximum of 3 green or loggerhead turtles (in aggregate) over the life of the permit. Modification #1 to Permit 1198 was issued on July 17, 2001, and expires December 31, 2003.

#### Permit #1133

Andre M. Landry currently possesses a 5-year scientific research permit to take listed sea turtles for the purpose of conducting studies on population status and recovery potential, habitat preference, movement and migration, foraging patterns, and impact of man's activities such as commercial and recreational fishing, dredging and habitat alteration/pollution. Dr. Landry is currently authorized to non-lethally take endangered green, Kemp's ridley and hawksbill and threatened loggerhead turtles annually from locations within the Western Gulf of Mexico, through the use of entanglement nets.

Due to a recent incidental mortality associated with the research, NMFS has amended permit 1133 to add a special condition to reduce the likelihood of additional mortalities associated with research activities in the Gulf of Mexico. Amendment #2 to Permit 1133 was issued on July 19, 2001, authorizing the continued non-lethal take of 100 green, 200 Kemp's ridley, 100 loggerhead and 20 hawksbill turtles annually. Permit 1133 expires January 31, 2003.

Dated: July 20, 2001.
