j. *Deadline Date:* 60 days from the date of issuance of this notice.

All documents (original and eight copies) should be filed with: David P. Boergers, Secretary, Federal Energy Regulatory Commission, 888 First Street, NE., Washington, DC 20426. Comments, protests and interventions may be filed electronically via the Internet in lieu of paper. See, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site under the "e-Filing" link.

The Commission's rules of practice and procedure require all interveners filing documents with the Commission to serve a copy of that document on each person whose name appears on the official service list for the project. Further, if an intervener files comments or documents with the Commission relating to the merits of an issue that may affect the responsibilities of a particular resource agency, they must also serve a copy of the document on that resource agency.

k. *Status of environmental analysis:* This application has been accepted for filing and is ready for environmental analysis at this time. The Commission will prepare a draft and a final Environmental Assessment.

l. *Description of the Project:* The St. Anthony Falls Project currently consists of two developments on the Mississippi River, the Upper Development and the Lower Development.

The Upper Development consists of the following existing facilities located across from the U.S. Army Corps of Engineers Upper Saint Anthony Lock: (1) Horseshoe Dam, a 1,952-foot-long concrete, timber, and rock structure topped with 1.6-foot-high wooden flashboards; (2) the main spillway, a concrete, timber and rock structure 425

feet wide and 150 feet-long; (3) a 340-foot-long roll dam; (4) a 358-acre reservoir with a normal pool water surface elevation of 799.2 feet NGVD, and a total storage capacity of 967 acre-feet; (5) a concrete and masonry powerhouse, 133 feet long by 92 feet wide; (6) 5 turbines with a total installed capacity of 12,400 kilowatts, and a maximum hydraulic capacity of 4,025 cfs, producing an average of 79,518 megawatt-hours annually; and (7) four 115-kilovolt primary transmission lines; and other appurtenances.

The Lower Development consists of an upstream closure dam, a downstream closure dam, and left retaining wall which encompass approximately 3.53 acres of land owned by Northern States Power Company (NSP). There are currently no hydropower facilities at the Lower Development. In November of 1987, the St. Anthony Falls Lower Dam Hydro Plant experienced an undermining failure. On August 19, 1988, the Commission issued an order authorizing complete demolition and removal of the lower facility. Demolition of the powerhouse was completed by the end of 1988. As of August 2001, all necessary remedial work necessary to ensure dam safety at the Lower Development has been completed to the Commission's satisfaction.

As part of the application for re-licensure of St. Anthony Falls Project, the applicant proposes to remove the lower development from the project. The Commission will discuss this alternative in its Environmental Assessment.

m. *Locations of the application:* A copy of the application is available for inspection and reproduction at the Commission's Public Reference Room, located at 888 First Street, NE, Washington, DC 20426. Copies of this filing are on file with the Commission and are available for public inspection.
