#### Integrated Modular Avionics (IMA) Hardware Elements.

**AGENCY:** Federal Aviation Administration, DOT

**ACTION:** Notice of availability for public comment.

**SUMMARY:** This notice announces the availability of and requests comments on a proposed Technical Standard Order (TSO) pertaining to integrated modular avionics hardware elements (IMA). The proposed TSO prescribes the criteria for the minimum performance standard (MPS) that IMA hardware element equipment must meet to be identified with the appropriate TSO marking.

#### SUPPLEMENTARY INFORMATION:

##### Comments Invited

Interested persons are invited to comment on the proposed TSO listed in this notice by submitting such written data, views, or arguments as they desire to the above specified address.

Comments received on the proposed TSO may be examined, before and after the comment closing date, in Room 815, FAA Headquarters Building (FOB-10A), 800 Independence Avenue, SW., Washington, DC 20591, weekdays except Federal holidays, between 8:30 a.m. and 4:30 p.m. All communications received on or before the closing date for comments specified above will be considered by the Director, Aircraft Certification Service before issuing the final TSO.

##### Background

Traditionally, avionics systems consisted of dedicated Line Replaceable Units (LRUs) which performed specific functions such as autoflight, flight management, and flight deck display. TSOs were written for these LRUs and their functions. Advancements in digital technology have created a trend toward higher levels of integration and modularity. In many modern integrated systems software determines functionality, while hardware serves as a platform for input, output, data storage, and software execution. Since these basic attributes tend to be similar for various applications, efficiencies can be gained by using various types of generic airborne hardware elements to execute these functions.

This TSO refers to these generic hardware elements as "IMA hardware elements", which includes modules, cabinets, or racks. A module may contain software to enable electronic part marking and/or future loading of functional software. These modules will not function without being installed in specific cabinets or racks. Module types may include data processing modules,

power supply modules, communication and data bus modules, or others. Cabinets or racks are used to host IMA modules. These cabinets or racks may be simple mechanical enclosures, or they may incorporate active cooling elements, power supplies, communication interfaces, backplanes for data and power, or any combination of these features.
