Species Covered in This Notice

The following species are covered in this notice:

Fish

Endangered Shortnose Sturgeon
(*Acipenser brevirostrum*)

Application 1360

The applicant hypothesizes that the recovery of shortnose sturgeon on the Hudson River occurred due to one or several strong year-classes following nursery system recovery to normoxia after 1977. The applicant proposes to test this hypothesis by determining the ages of shortnose sturgeon caught in the Hudson river by interpreting annulus of pectoral fin spines. The method will be tested on 10 captive shortnose sturgeon from seven age classes (70 total) from US Fish and Wildlife Service Warm Springs Fish Hatchery, Georgia. The applicant will clip a 1cm section from the primary spine of one pectoral fin near the point of articulation. After this has been tested in hatchery fish, the applicant proposes to capture shortnose sturgeon in the Hudson River with gillnets, handle, measure, check for tags, tag, passive integrated transponder tag, sex (by external or fiberoptic examination), and release. The applicant proposes to take 190 shortnose sturgeon in 2002 and 480 in 2003.

Dated: January 17, 2002.

Chief, Permits, Conservation, and Education Division, Office of Protected Resources, National Marine Fisheries Service.
