FOR FURTHER INFORMATION CONTACT:

Kristin E. Palmer, (630) 252-2708.

SUPPLEMENTARY INFORMATION: The scope of work for this cooperative research and development and demonstration solicitation will be in two phases. This solicitation will be for Phase I applications only, but will describe some aspects of possible Phase II awards as reference information. It is DOE's intent to evaluate submitted designs and business plans in Phase I, and support the further testing of only the most promising approaches in Phase II. Phase I activities involve the design and the proof-of-design stage and Phase II involves the demonstration of the Phase I design architecture to a large scale in real-world settings while integrating with the operations of one or more feeder lines. The duration of the Phase I project is estimated to be six months, with the entire project's scope of work—for Phase I and Phase II combined—to be completed within 2.5 years. DOE expects to award about four to six cooperative agreements under this solicitation for Phase I. It is anticipated that two or three of the Phase I applicants will proceed to Phase II. Only Phase I awardees will be eligible for consideration for Phase II. Estimated total DOE funding for Phase I is \$1.2M. Subject to the availability of funds, the estimated total of any future DOE funding for Phase II is \$1.8M. A minimum non-federal cost sharing commitment of 20% of the total proposed costs for Phase I is required. A minimum non-federal cost sharing commitment of 50% of the total proposed costs for Phase II is required.

The purpose of this solicitation is to invite interested parties to submit an application for cost-shared cooperative agreements with the Department of Energy (DOE) for research and development and demonstration for integrated communication and control solutions that would enable interoperable and integrated operation of large numbers of distributed energy resources from varying suppliers to achieve optimization in power quality,
