

on thyroid hormone status of pregnant women and their infants. *Pediatric Research*. 36:468–73.) TEQ correlated negatively with maternal pregnancy total T3 and maternal postdelivery total T3 and total T4; similar associations were seen for planar PCB TEQ and total PCB and TEQ, and the associations with total T3 were also observed for nonplanar PCB TEQ. In addition, all four TEQ measurements correlated positively with infant 2-week TSH, and all except the nonplanar PCB TEQ were positively associated with the infant 3-month TSH.

Another environmental study examined PCB concentrations in breast-milk specimens, without adjustment for lipids, in relation to thyroid hormones in cord serum in a population with background exposure. (Longnecker MP, Gladen BC, Patterson DG, Rogan WJ. 2000. Polychlorinated biphenyl (PCB) exposure in relation to thyroid hormone levels in neonates. *Epidemiology* 11:249–254.) They found little evidence of an association, although the direction of the coefficient for TSH in multiple-regression analysis was consistent with findings in other studies: increases in TSH with increases in PCBs. NAS stated that because non-dioxin-like PCBs are the most abundant, and PCBs are contaminated with furans, this study is not very informative for the effects of TCDD or the herbicides used in Vietnam.

Another environmental study examined TCDD-exposed workers at two plants who were engaged in the production of 2,4,5-T or one of its derivatives. (Calvert GM, Sweeney MH, Deddens J, Wall DK. 1999. Evaluation of diabetes mellitus, serum glucose, and thyroid function among United States workers exposed to 2,3,7,8-tetrachlorodibenzo-p-dioxin. *Occupational and Environmental Medicine* 56(4):270–276.) Referents were residents in the neighborhood of each worker, matched by age, race, and sex. Serum specimens were analyzed for TCDD, total T4, TSH, and thyroid hormone binding resin, and the free T4 index was calculated. The results showed that workers had a significantly higher adjusted mean free T4 index than referents, and the highest index was among those with the highest half-life extrapolated TCDD, but a clear dose-response relationship was not observed.

A Vietnam veteran study examined thyroid-hormone status in the AFHS

cohort. (Pavuk M, Schecter AJ, Akhtar FZ, Michalek JE. Serum 2,3,7,8-Tetrachlorodibenzo-p-dioxin (TCDD) Levels and Thyroid Function in Air Force Veterans of the Vietnam War (in press).) At each of the 1982, 1985, 1987, 1992, and 1997 examinations, there was a trend toward an increasing concentration of TSH, which was not accompanied by changes in circulating T4 or in the percentage uptake of T3 (measured only in the earlier years). In a repeated-measures linear regression adjusted for age, race, and military occupation, the low-exposure and high-exposure Ranch Hands had TSH significantly higher than the comparison population. There was no evidence of changes in clinical thyroid disease. The percentage with abnormally high TSH was higher at each examination in the high-exposure group than in the comparison population, but these findings were not very precise.

After reviewing the relevant literature, NAS stated that although some effects on thyroid homeostasis have been observed, mainly in the perinatal period (the period shortly before and after birth), the functional importance of those changes is unclear because adaptive capacity may be adequate to accommodate them. NAS noted that the AFHS study demonstrated biologic changes in TSH levels, but without any accompanying effect on the health of the Ranch Hand veterans. NAS further stated that the evidence indicates that both infants and Ranch Hand personnel were able to adapt to the changes that may have been induced by higher body burdens of TCDD.

NAS concluded that there is inadequate or insufficient evidence to determine whether an association exists between exposure to herbicides and adverse effects on thyroid homeostasis.

Taking account of the available evidence and NAS' analysis, the Secretary has found that the credible evidence against an association between herbicide exposure and adverse effects on thyroid homeostasis outweighs the credible evidence for such an association, and he has determined that a positive association does not exist.

NAS reviewed scientific and medical articles published since the publication of its first report as an integral part of the process that resulted in "Veterans and Agent Orange: Update 2002." The comprehensive review and evaluation of the available literature which NAS

conducted in conjunction with its report has permitted VA to identify all conditions for which the current body of knowledge supports a finding of an association with herbicide exposure. Accordingly, the Secretary has determined that there is no positive association between exposure to herbicides and any other condition for which he has not specifically determined that a presumption of service connection is warranted.

Approved: May 8, 2003.

Anthony J. Principi,

Secretary of Veterans Affairs.

DEPARTMENT OF VETERANS AFFAIRS

National Commission on VA Nursing; Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under Public Law 92–463 (Federal Advisory Committee Act) that the National Commission on VA Nursing will hold its fifth meeting on June 11–12, 2003, at the Hyatt Regency Crystal City, 2799 Jefferson Davis Highway, Arlington, VA 22202. On Wednesday, June 11, the meeting will begin with registration at 8:30 a.m. and adjourn at 5 p.m. On Thursday, June 12, the meeting will begin at 8 a.m. and adjourn at 2 p.m. The meeting is open to the public.

The purpose of the Commission is to provide advice and make recommendations to Congress and the Secretary of Veterans Affairs regarding legislative and organizational policy changes to enhance the recruitment and retention of nurses and other nursing personnel in VA. The Commission is required to submit to Congress and the Secretary of Veterans Affairs a report, not later than two years from May 8, 2002, on its findings and recommendations.

On June 11, the Commission will discuss the findings of several recent surveys on nurse turnover and work environment, and will review testimony from Commission hearings held during April. On June 12, the Commission will focus most of its work on finalizing its interim report.

No time will be allocated at this meeting for receiving oral presentations from the public. However, members of the public may direct written questions or submit prepared statements for review by the Commission in advance of the meeting, to Ms. Oyweda Moorer, Director of the National Commission on

VA Nursing, at Department of Veterans Affairs (108N), 810 Vermont Avenue, NW., Washington, DC 20420. Any member of the public wishing to attend the meeting should contact Ms. Stephanie Williams, Program Analyst at (202) 273-4944.

Dated: May 13, 2003.
By Direction of the Secretary.

E. Philip Riffin,

Committee Management Officer.
