

R&O revised the FCC Form 302-AM to facilitate electronic filing by using of certifications and an engineering technical box; revising questions; and adding detailed instructions for processing standards and rule interpretations. These changes reduced the applicant's filing burden when preparing and submitting supporting exhibits and allowed the Commission to streamline its application processing. The Commission has also begun to audit pre- and post-application grants at random to preserve the application process' integrity. The FCC uses these data to confirm that each station has been built as specified in the construction permit; to update FCC station files; and for inclusion in future station operating licenses.

The form is being revised to incorporate additional data fields in accordance with the recommendation in International Maritime Organization (IMO) Assembly Resolution A.887 (21) submitted by the National GMDSS Implementation Task Force (charted by the United States Coast Guard); to change certain certification statements into questions giving applicants an option to clarify if a license is required; and to clarify existing instructions for the general public. The data collected on this form includes the date of birth for Commercial Operator licensees, however, this information will be redacted from public view.

There is no change to the estimated average burden or the number of

respondents of the additional data elements proposed by the IMO. The Task Force argues that search and rescue operations could be significantly improved if the Commission's database contained this additional information.
