k. This application has been accepted for filing.

1. *The existing project consists of:* (1) The 209-foot-high, 670-foot-long concrete thin arch dam with a crest elevation of 7,814 feet above mean sea level (msl); (2) the Williams Fork reservoir with a surface area of 1,628 acres and storage of 96,822 acre-feet at elevation 7,811 feet msl; (3) a reinforced concrete penstock intake on the face of the dam, with a 7-foot by 5-foot fixed

The applicant would increase the project's generating capacity to 3,650 kW by installing a second, 500-kW vertical turbine/generator. The new unit would be located adjacent to the existing powerhouse inside the river outlet works structure and would discharge into the same tailrace as the existing turbine via a weir box. The new unit would use water being released from the reservoir for other purposes, and operation of the dam would not be changed to increase power production.
