BILLING CODE 7555–01–M

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–305]

Nuclear Management Company, LLC; Notice of Consideration of Issuance of Amendment to Facility Operating License, Proposed No Significant Hazards Consideration Determination, and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. DPR–43 issued to Nuclear Management Company, LLC (the licensee), for operation of the Kewaunee Nuclear Power Plant located in Kewaunee County, Wisconsin.

The proposed amendment would change the Technical Specifications to modify the auxiliary feedwater (AFW) pump suction protection requirements and change the design basis as described in the Updated Safety Analysis Report to revise the functionality of the discharge pressure switches to provide pump runoff protection, which requires operator actions to restore the AFW pumps for specific post-accident recovery activities.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act), and the Commission's regulations.

The Commission has made a proposed determination that the amendment request involves no significant hazards consideration. Under the Commission's regulations in Title 10 of the Code of Federal Regulations (10 CFR), Section 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of no significant hazards consideration, which is presented below:

1. Does the proposed amendment involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed amendment does not involve a significant increase in the probability of an accident previously evaluated. The proposed changes are associated with the auxiliary feedwater (AFW) system, which is not an initiator of any accident previously evaluated.

The proposed amendment does not involve a significant increase in the consequences of an accident previously evaluated. The mitigation functions assumed in the accident analyses will continue to be performed. Operator actions may be required to assure the AFW pumps are aligned for post-accident recovery operations. With these actions additional consequences are not incurred.

Therefore, operation of the facility in accordance [with] the proposed amendment would not involve a significant increase in the probability or consequences of any accident previously evaluated.

2. Does the proposed amendment create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The AFW system is being modified by adding suction pressure switches to protect the AFW pumps from damage due to a loss of normal suction. The addition of the suction pressure switches and the associated circuitry does not introduce new failure modes or effects. The evaluation of the new suction pressure trip circuit design concluded the new suction pressure trip circuit is similar to the existing discharge pressure trip circuit design and therefore, no new failure modes or effects are introduced. In addition, the AFW system is being modified by altering the function of the discharge pressure trip channel to provide pump runoff protection. Operator actions may be required to assure the AFW pumps are aligned for post-accident recovery operations. With these actions, the accident recovery operations can be performed and a new or different kind of accident is not
