

and other areas at the Mine. Mill Creek was diverted around the waste but water has flowed and continues to flow, over and through waste areas, tailings and process ponds, causing acid mine drainage, and chronic releases of hazardous substances and contaminants to Mill Creek. Additionally, catastrophic failures of impoundments in the Mill Creek channel have caused acute releases of hazardous substances and contaminants to Mill Creek.

In August 2000, the Environmental Protection Agency (EPA) proposed to add the Rio Tinto Mine Site (Site) to the National Priorities List. The State of Nevada did not concur with this recommendation. EPA recommended that the Nevada Division of Environmental Protection (NDEP) enter into negotiations with the RTWG and the Shoshone-Paiute Tribes of Duck Valley (Tribes) regarding proper remediation at the Site with input by the Bureau of Indian Affairs, the U.S. Fish and Wildlife Service, and the U.S. Forest Service. These negotiations resulted in an Administrative Order on Consent (AOC) between the NDEP and the RTWG. The AOC includes a scope of work outlining the remedial decision process. Also, a Memorandum of Understanding (MOU) between the NDEP, Tribes, and EPA is in place. Through the AOC process, the RTWG is continuing to conduct investigative and assessment activities at the Site in order to study remedial alternatives.

The Rio Tinto Mine Trustee Council Natural Resource Trustees (Trustees) are representatives of federal, state, and tribal government entities with trust authority over natural resources potentially injured by releases of hazardous substances from the Rio Tinto Mine. The Trustees have the authority to obtain damages from potentially responsible parties for past, present, and future injuries to natural resources caused by releases of hazardous substances at the facility. Such natural resources include, but are not limited to, ground water, surface water, sediment, fish, amphibian and other aquatic biota, floodplain soils, riparian vegetation, and wildlife in and around the Mill Creek drainage and the Owyhee River drainage. The assessment area includes the area surrounding and downstream from the Rio Tinto Mine in Elko, County; the Humboldt National Forest, and the Duck Valley Indian Reservation.
