

Hz, and one expressed in psi. The estimated numbers of Atlantic bottlenose dolphins and Atlantic spotted dolphins potentially exposed to 182 dB and 23 psi, during one year, if mitigation measures were not effectively implemented within the 230-m (754 ft) ZOI, are 4 and 3 individuals.

Possible Effects of Activities on Marine Mammal Habitat

The Air Force anticipates no loss or modification to the habitat used by Atlantic bottlenose dolphins or Atlantic spotted dolphins in the EGTR. The primary source of marine mammal habitat impact resulting from the NEODS missions is noise, which is intermittent (maximum 30 times per year) and of limited duration. NMFS does not anticipate that either debris (which will be recovered following test activities) or the minimal chemical residue from the detonated charges will affect marine mammal habitat.

Possible Effects of Activities on Subsistence Needs

There are no subsistence uses for Atlantic bottlenose dolphins Atlantic spotted dolphins in Florida waters, and thus, there are no anticipated effects on subsistence needs.

Endangered Species Act

In a Biological Opinion issued on October 25, 2004, NMFS concluded that the NEODS training missions and their associated actions are not likely to jeopardize the continued existence of threatened or endangered species under the jurisdiction of NMFS or destroy or adversely modify critical habitat that has been designated for those species. NMFS has issued an incidental take statement (ITS) for 4 species of sea turtles (leatherback sea turtle (*Dermochelys coriacea*), green sea turtle (*Chelonia mydas*), Kemp's ridley sea turtle (*Lepidochelys kempi*), and loggerhead sea turtle (*Caretta caretta*)) pursuant to section 7 of the Endangered Species Act. The ITS contains reasonable and prudent measures with implementing terms and conditions to minimize the effects of this take. This IHA action is within the scope of the previously analyzed action and does not change the action in a manner that was not considered previously.

National Environmental Policy Act

NMFS prepared an Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) on the Issuance of Authorizations to Take Marine Mammals, by Harassment, Incidental to Naval Explosive Ordnance Disposal School Training Operations at

Eglin Air Force Base, Florida. Therefore, preparation of an EIS on this action is not required by section 102(2) of the NEPA or its implementing regulations. A copy of the EA and FONSI are available upon request (see **ADDRESSES**).

Conclusions

NMFS has determined that the NEODS training operations, as described in this document and in the application for an IHA, will result in no more than Level B harassment of Atlantic bottlenose dolphins and Atlantic spotted dolphins and will have no more than a negligible impact on these stocks. The effects of the NEODS training are expected to be limited to short-term and localized TTS-related behavioral changes, and these takes will be at the lowest level practicable due to incorporation of the mitigation measures mentioned previously in this document. With the application of the mitigation measures, as well as the potential density of dolphins in the area of the NEODS training operations, NMFS believes it highly unlikely that the proposed action will result in any injury or mortality of marine mammals. Additionally, the NEODS training operations will not have an unmitigable adverse impact on the availability of marine mammal stocks for subsistence use, as there are no subsistence uses for Atlantic bottlenose dolphins or Atlantic spotted dolphins in Florida waters.

Authorization

NMFS has issued a 1-year IHA to EAFB for the take of Atlantic bottlenose dolphins and Atlantic spotted dolphins, by harassment, incidental to NEODS training operations, which include up to 30 detonations of small C-4 charges per year, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.
