

and also must be received by 5 p.m., October 21, 2005. Oral testimony before the GSP Subcommittee of the TPSC will be limited to five-minute presentations that summarize or supplement information contained in briefs or statements submitted for the record. Post-hearing briefs or statements will be accepted if they conform with the regulations cited below and are submitted, in English, by 5 p.m., November 14, 2005. Parties not wishing to appear at the public hearing may submit post-hearing written briefs or statements, in English, by 5 p.m., November 14, 2005.

Requirements for Submission

In order to facilitate prompt processing of submissions, USTR strongly urges and prefers electronic e-mail submissions only in response to this notice. Hand-delivered submissions will not be accepted. These submissions should be single-copy transmissions in English with the total submission not to exceed 20 single-spaced standard letter-size pages. E-mail submissions should use the following subject line: "2005 GSP Review" and, as appropriate "Notice of Intent to Testify" or Written Comments." Documents must be submitted in English in one of the following formats: MSWord (.DOC), WordPerfect (.WPD), or text (.TXT) files. Documents may not be submitted as electronic image files or contain imbedded images (for example, ".JPG," ".TIF," ".PDF," ".BMP," or ".GIF"). Supporting documentation submitted as spreadsheets are acceptable as Excel files, formatted for printing on 8½ x 11 inch paper. To the extent possible, any data attachments to the submission should be included in the same file as the submission itself, and not as separate files.

If the submission contains business confidential information, a non-confidential version of the submission must also be submitted that indicates where confidential information was redacted by inserting asterisks where material was deleted. In addition, the confidential submission must be clearly marked "BUSINESS CONFIDENTIAL" at the top and bottom of each page of the document. The non-confidential version must also be clearly marked at the top and bottom of each page (either "PUBLIC VERSION" or "NON-CONFIDENTIAL"). Documents that are submitted without any marking will be considered public documents. For any document containing business confidential information submitted as an electronic attached file to an e-mail transmission, the file name of the business confidential version should

begin with the characters "BC-", and the file name of the public version should begin with the characters "P-". The "P-" or "BC-" should be followed by the name of the party (government, company, union, association, etc.) making the submission.

E-mail submissions should not include separate cover letters or messages in the message area of the e-mail; information that might appear in any cover letter should be included directly in the attached file containing the submission itself, including the sender's e-mail address and other identifying information.

The e-mail address for these submissions is

FR0052@USTR.EOP.GOV. Documents not submitted in accordance with these instructions might not be considered in this review. If unable to provide submissions by e-mail, please contact the GSP Subcommittee to arrange for an alternative method of transmission.

Public versions of all documents relating to this review will be available for review approximately two weeks after the relevant due date by appointment in the USTR public reading room, 1724 F Street NW., Washington, DC. Appointments may be made from 9:30 a.m. to noon and 1 p.m. to 4 p.m., Monday through Friday, by calling (202) 395-6186.

FOR FURTHER INFORMATION CONTACT: For procedural questions concerning written comments or participation in the public hearing, contact Regina Teeter, (202) 395-9681. All other questions should be directed to Marideth Sandler, Executive Director of the GSP Program, Office of the United States Trade Representative, 1724 F Street, NW., Room F-220, Washington, DC 20508, (202) 395-6971.

Carmen Suro-Bredie,

Chairman, Trade Policy Staff Committee.

BILLING CODE 3190-W5-P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

Notice of Safety Advisory 2005-04

AGENCY: Federal Railroad Administration (FRA), DOT.

ACTION: Notice of Safety Advisory 2005-04.

SUMMARY: FRA is issuing Safety Advisory 2005-04 advising shippers, consignees, and railroads of the dangers of allowing cars of "time-sensitive" chemicals to remain undelivered beyond their anticipated date of

placement and to recommend enhanced procedures to avoid such occurrences. This action is being taken to improve the safety and reliability of hazardous materials shipments by railroad.

FOR FURTHER INFORMATION CONTACT:

Thomas A. Phemister, Railroad Safety Specialist (Hazardous Materials), Hazardous Materials Division, Office of Safety Assurance and Compliance, Federal Railroad Administration, U.S. Department of Transportation, 1120 Vermont Avenue, NW., Washington, DC 20590-0001 (telephone: (202) 493-6050; e-mail: *tom.phemister@fra.dot.gov*).

SUPPLEMENTARY INFORMATION:

Background

At 6:40 p.m. EDT on August 28, 2005, in Cincinnati, OH, fire department personnel responded to a report of smoke coming from a tank car in a railroad yard (Linwood Yard¹) operated by the Indiana and Ohio Railway Company (IORY). As shipped, tank car PLCX 224841 contained 23,543.97 gallons of styrene monomer, stabilized (170,966.7 pounds at the loading temperature of 60° F.). Styrene monomer, stabilized, is a class 3 (flammable liquid) material. As a result of the release residents were evacuated within a 1 mile radius, later reduced to a ½ mile radius and, by the end of the fourth day, the exclusion zone was reduced further to the immediate area around the car. The Environmental Protection Agency's Pollution Report indicates that, initially, 800 people were evacuated. In addition, four schools closed, and the Ohio River was closed to traffic for a short time. The incident lasted approximately 5 days.

FRA's preliminary investigation indicates that the cause of the incident was a polymerization of the styrene monomer in the tank car due to the deterioration of the inhibiting agent (para-tertiary butylcatechol) as a result of the extended time in transportation. The shipment consisted of 99.91% Styrene Monomer and .09% of other components (the largest identifiable component was the inhibiting agent) and was offered into transportation on December 30, 2004 by Westlake Styrene, Sulphur, LA, and consigned to Queen City Terminals, Cincinnati, OH, under bill of lading number 80435877. Movement records show that the car made a normal trip to the IORY, arriving at interchange between the Norfolk Southern Railway Company and the IORY (at Sharonville, OH) on January 21, 2005. IORY records show the car was moved from the interchange yard to

¹ Linwood Yard on the Indiana & Ohio Railway is also known as Undercliff Yard.

McCullough Yard where it stayed for approximately 5 or 6 weeks before it was moved to Linwood Yard on March 12, 2005. From the time the car was interchanged to IORY until smoke was observed on August 28, 2005, FRA has found no records indicating that the IORY attempted to contact Queen City Terminals to arrange for delivery of the car.

Time-Sensitive Commodities

Each year, America's railroads safely transport more than 1.7 million hazardous materials shipments to their destinations. Certain hazardous materials pose particular risks if not transported, and delivered, promptly. Among these are cryogenic materials, which must be transported, and maintained, at very low temperatures. Federal hazardous materials regulations (49 CFR 173.319(a)(3)) require that:

The shipper shall notify the Federal Railroad Administration whenever a tank car containing any flammable cryogenic liquid is not received by the consignee within 30 days from the date of shipment. Notification to the Federal Railroad Administration may be made by e-mail to Hmassist@fra.dot.gov or telephone call to (202) 493-6229.²

Another group of chemicals are time-sensitive because they are shipped with a stabilizing or inhibiting chemical that retards the chemical's natural tendency to polymerize. Polymerization is a chemical reaction in which a large number of relatively simple molecules combine to form complex chains of macromolecules, often times with the evolution of heat and, in closed containers like tank cars, pressure. Of interest here, this process is how styrene monomer becomes the useful polystyrene that is so easily colored, molded, and fabricated.³ Of course, polymerization is not intended to occur while the material is being transported, which is why it is shipped with an inhibiting agent.

The members of the Association of American Railroads (AAR) and the American Short Line and Regional Railroad Association have adopted the recommendations contained in AAR's Circular OT-55-H, "Recommended Railroad Operating Practices for Transportation of Hazardous Materials."⁴ This package of recommended procedures includes

suggestions for time-sensitive materials. It places responsibility on the railroads for monitoring these shipments and escalating their response as necessary when any car with a time-sensitive product is delayed in transit. The circular includes a list of 20-day time-sensitive products and a list of 30-day time-sensitive products. Products with a 20-day time-in-transit limit include Ethylene, refrigerated liquid; Hydrogen, refrigerated liquid; Chloroprene, stabilized; Methyl Methacrylate Monomer, uninhibited; and Hydrogen Chloride, refrigerated liquid. Products with a 30-day time-in-transit limit include Styrene monomer, stabilized and Recycled Styrene.

Recommendations

1. FRA strongly encourages all railroads to develop procedures that conform to AAR Circular OT-55-H and to assure that railroad employees responsible for the movement of time-sensitive chemicals are familiar with and clearly understand these procedures. Such actions will help ensure that these materials reach their destinations in a timely way. We note that, in accordance with the Hazardous Materials Regulations (HMR; 49 CFR parts 171-180), rail carriers must make every effort to expedite hazardous materials shipments.⁵

2. FRA recommends that shippers and consignees monitor the progress of time-sensitive materials that they have shipped and ordered. While the railroads have the primary responsibility to monitor the movement of freight along their tracks, close attention by shippers and consignees will provide an additional level of safety. A shipper sending a time-sensitive load to a consignee should call the consignee (or use fax or e-mail) and let that party know a car is on the way and should arrive before the expiration of an appropriate number of days. As the due date approaches, either the shipper or the consignee, or both, should contact the railroad(s) involved for a report on how the car is moving. Some shippers and receivers have enough volume of railroad traffic to warrant the installation of automated car monitoring equipment or to hire car monitoring services. FRA is not prescribing how this extra involvement should take place, but the agency will evaluate this activity to determine the need for any future regulatory or other agency action.

3. The HMR require each person who offers a hazardous material for transportation in commerce to class and

describe that material correctly.⁶ While the AAR's OT-55-H includes a list of time-sensitive materials, and 49 CFR 173.314 and 173.319 regulate specific sub-sets, there are many other products shipped as "stabilized" or "inhibited." Each of these has a chemical added, an inert gas blanket applied, or a shipping condition (such as cooling) utilized to promote product stability, purity, and safety. FRA recommends that shippers and consignees work with the railroads to explore ways to reduce the risks in transporting the full range of time-sensitive materials. One good start would be to apply the recommendations in this notice and the concepts in the industry's circular to such materials. FRA will be monitoring hazardous materials movements to ensure that those who offer for transportation and transport such chemicals in commerce work together to minimize the safety risks associated with the movement of time-sensitive materials.

FRA's investigation into the styrene incident in Cincinnati is not yet complete, but the fact that a car of time-sensitive material, carrying an inhibitor, was apparently allowed to languish on the same railroad for seven months is not acceptable. Enhanced efforts by the chemical producers, users, and carriers to monitor their shipments appropriately will further reduce the already low likelihood of a similar occurrence happening again.

Issued in Washington, DC, on September 29, 2005.

Daniel C. Smith,

Associate Administrator for Safety.
