

Development to date includes 1,805 active wells and 394 plugged and reclaimed wells within the CDW2 area. Currently within the CBG project area, 369 wells are active and 105 wells have been plugged and reclaimed. Existing infrastructure developed for CDW2 and CBG projects approved under previous environmental documents include: Arterial, collector, and well pad roads; compressor stations; connecting and sales pipelines; water wells; and powerlines.

BP America Production Company, the lead applicant representing itself, Devon, and other leaseholders, has proposed drilling and developing about 8,950 natural gas wells, including 100 to 500 coalbed natural gas wells, within the Continental Divide—Creston (CDC) project area. Wells would use a combination of vertical and directional drilling techniques. The proposal calls for a 15-year construction period with a 30 to 40 year life of project development and operational period.

Associated project facilities would include additional roads, gas and water collection pipelines, compressor stations, water disposal systems, and an electrical distribution system. During the preparation of the EIS, any interim development on public lands within the CDC project area will require a detailed environmental review by the BLM.

The purpose of the development is to extract and recover natural gas from the Continental Divide—Creston area for distribution to consumers. This project would help meet the need, goals and objectives of the President's National Energy Plan. Natural gas consumption in the United States is expected to increase by 25% over the next decade.

The EIS will analyze the environmental consequences of implementing the proposed action and alternatives. Identified agency concerns include, but are not limited to direct, indirect and cumulative effects to: Surface and ground water resources; air quality; wildlife populations and their habitats; cultural and paleontological resources; threatened and endangered wildlife and plant species; and local and regional socioeconomics. Other issues of concern include access to private and public land; impacts of road development and transportation to noxious weed control and livestock grazing operations; ability to successfully reclaim disturbed areas.

In addition to the Proposed Action, the EIS will analyze the effects of a No Action alternative. Contents for alternatives being considered include: A range of drilling surface densities; phased development; a range of

mitigation measures; and best management practices.

The proposed development is in conformance with the 1990 Great Divide Resource Management Plan (RMP). This RMP is currently being revised under the title Rawlins Resource Management Plan. BLM released the Draft EIS for the Rawlins RMP in December 2004.

Robert A. Bennett,
State Director.
