I. Background

The 2150-2160/62 MHz band is allocated for fixed and mobile services

and designated for Advanced Wireless Services (AWS).¹ AWS licensees will be obligated to relocate incumbent primary BRS² operations in the 2150-2160/62 MHz band to comparable facilities, most likely within the newly restructured 2495-2690 MHz band, as set forth under the rules and policies adopted by the Commission in the Ninth Report and Order in ET Docket No. 00-258.³

2005 Commission Order. In September 2005, the Commission concluded that reliable, public data on each incumbent BRS system that will be subject to relocation is essential in advance of the planned auction of the 2150-2155 MHz band.⁴ The Commission also concluded that, because the BRS service is currently licensed on the basis of geographic licensing areas, neither the Commission nor the public has reliable, up-to-date information on the construction status and/or operational parameters of each BRS system in the 2150-2160/62 MHz band that will be subject to relocation.⁵ Accordingly, the Commission ordered BRS licensees to submit information on the locations and operating characteristics of their BRS systems in the 2150-2160/62 MHz band, as well as for any constructed and operational stations of their lessees, and noted that the information required would ultimately be necessary in the context of relocation negotiations.⁶ The
