

EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, and are displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

**Abstract:** As required by the Clean Air Act, EPA has regulations establishing emission standards and other requirements for various classes of vehicles and engines. These regulations require that compliance be demonstrated prior to EPA granting a "Certificate of Conformity". EPA charges fees for administering this certification program; in 2004 the fees program was expanded to include non-road categories of vehicles and engines, such as several categories of marine engines, locomotives, non-road recreational vehicles, and many non-road compression-ignition and spark-ignition engines. Manufacturers and importers of covered vehicles and engines are required to pay the applicable certification fees prior to their certification applications being reviewed. This ICR estimates the paperwork burden of complying with this fees requirement.

**SUPPLEMENTARY INFORMATION:** The  
Community's Confidentiality, Privacy,  
and Security (CPS) Workgroup will  
undertake steps to evaluate instances  
where health information technology  
(health IT) has shifted the CPS  
paradigm, as well as where policy (due  
to evolving technology) have become  
unclear or allow for varied  
interpretation.

The first two issues before the CPS  
workgroup (identity proofing and user  
authentication) were chosen because of  
their foundational importance to any  
security initiative. Inextricably linked,  
both issues need discussion in order to  
determine how authorized entry is  
governed to a new technology product,  
service, or infrastructure. In typical  
workflows, identity proofing and user  
authentication are the first of many  
processes completed in health care  
environments, followed shortly  
thereafter by other more complex  
activities such as access control, data  
management, information matching and  
transmission, and information assurance  
(data integrity, business continuity,  
etc.).

There is no one solution for identity  
proofing and user authentication. As  
health IT evolves, we expect that  
methods for identity proofing and user  
authentication will evolve as well.  
Certain types of health IT products may  
require more stringent methods while  
others may not, and understanding  
these tradeoffs will be critical to  
determining CPS policies. Deciding how  
to prove (with some degree of  
confidence) that someone is who they  
claim to be, followed by a repeatable  
authentication process, are necessary  
steps to ensure that an authorized  
person or entity can access a health IT  
product or service in a private and  
secure manner.

In an effort to inform members of the  
public responding to the questions  
posed for testimony, we are defining
