II. Contractor Requirements

Under Contract No. EP-W-07-025, Syracuse Environmental Research Associates, Inc. and its subcontractor, Syracuse Research Corporation, will access FIFRA/CBI data in the preparation of assessments and characterizations of pesticides. The assessments and characterizations will assess drinking water and its risk to humans and nonhumans. Assessment production support would include developing full ecological risk assessments and or drinking water exposure assessments, preparing sections of risk assessments, investigating a specific issue or problem related to a risk assessment, or conducting literature searches for data on individual chemicals or groups of chemicals to augment existing data sets. An ecological risk assessment in OPP evaluates the likelihood that adverse ecological effects may occur as a result of exposure to a pesticide. It includes three primary phases: Problem formulation, analysis, and risk characterization. A drinking water assessment generally includes a discussion of the pesticide usage including application methods and rates, and geographical areas of use, the occurrence exposure data used to assess exposure, a description of the models and scenarios used to estimate concentration in both surface water and

ground water, and a discussion of the uncertainty and data gaps.

The OPP has determined that access by Syracuse Environmental Research Associates, Inc. and its subcontractor, Syracuse Research Corporation, to information on all pesticide chemicals may be necessary for the performance of this contract.

Some of this information may be entitled to confidential treatment. The information has been submitted to EPA under sections 3, 4, 6, and 7 of FIFRA and under sections 408 and 409 of FFDCA.
