SUPPLEMENTARY INFORMATION:

I. Abstract

The owners of vessels that fish out of West Coast ports for highly migratory species such as tuna, billfish and sharks are required to submit information about their fishing activities so that the National Marine Fisheries Service and the Pacific Fishery Management Council will be able to monitor the fisheries and determine the effects and effectiveness of the Fishery Management Plan (FMP) for U.S. West Coast Fisheries for Highly Migratory Species (HMS).

The catch and effort statistics from logbooks are essential for evaluating if the objectives of the FMP are being achieved and for evaluating the impacts of potential changes in management to respond to new information or new problems in the fisheries. The use of vessel monitoring system units will facilitate enforcement of closures associated with the longline fishery.

II. Method of Collection

Paper logbooks and electronic reports are required from participants.

SUPPLEMENTARY INFORMATION:

I. Abstract

Fishery quotas are established for many species in the fishery management plans developed by both the Gulf of Mexico Reef Fish Fishery Management Council and the South Atlantic Fishery Management Council. The Southeast Fisheries Science Center (SFSC) has been delegated the responsibility to monitor these quotas. To do so in a timely manner, seafood dealers that handle these species are required to report the purchases (landings) of these species. The frequency of these reporting requirements varies depending on the magnitude of the quota (*i.e.*, lower quota usually require more frequent reporting) and the intensity of fishing effort. The most common reporting frequency is twice a month; however, some fishery quotas, *e.g.*, the mackerel gill net, necessitates weekly or by the trip.

In addition, information collection included in this family of forms includes interviews with fishermen to gather information on the fishing effort, location and type of gear used on individual trips. This data collection is conducted for a subsample of the fishing trips and vessel/trips in selected commercial fisheries in the Southeast region. The fishing trips and individuals are selected at random to provide a viable statistical sample. These data are used for scientific analyses that support critical conservation and management decisions made by national and international fishery management organizations.

II. Method of Collection

The SFSC will provide a reporting form to each dealer selected to report the minimum information necessary to

monitor the quota(s). This form must be faxed or sent as an e-mail attachment to the SFSC within 5 business days of the end of each reporting period. For dealers that do not have a rapid fax machine or access to e-mail, pre-addressed, pre-paid envelopes will be provided. Fishery biologists that are located at strategic fishing ports throughout the Southeast Region (North Carolina through Texas) intercept fishermen as they are unloading their catch and interview them.

III. Data

Type of Review: Regular submission.

Estimated Total Annual Burden Hours: 1,838.

Estimated Total Annual Cost to Public: \$0.

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Marine Fisheries Service's At-Sea Hake Observer Program defines observer duties, trains and debriefs observers, and manages data and release. The observers, deployed aboard at-sea processing vessels in the U.S. West Coast hake (*a.k.a.* whiting) fishery, are hired by observer providers who contract with the at-sea processors to provide the required observer coverage (50 CFR part 660). This data collection relates to the response time for observer providers and observers to register for training, debriefing or to respond to suspension or decertification.
