

Regarding the NJDEP's second comment above, the NRC staff recognizes that the State of New Jersey has established a 15 millirem per year standard (under NJDEP's regulations at N.J.A.C. 7:28-12). The NRC has previously advised the NJDEP that these regulations raise preemption concerns [ML003763858]. States are preempted from regulating NRC-licensed materials for the purposes of radiation protection unless they enter into a formal agreement with the NRC. To date, New Jersey has not done so. Moreover, as indicated above, the Licensee has developed DCGLs acceptable to the NRC which support the 25 millirem per year standard set forth in 10 CFR 20.1402, and the staff must implement these DCGLs for the purpose of evaluating the proposed action.

The NRC staff has further determined that the proposed action is of a procedural nature, and will not affect listed species or critical habitat. Therefore, no further consultation is required under section 7 of the Endangered Species Act. The NRC staff has also determined that the proposed action is not the type of activity that has the potential to cause effects on historic properties. Therefore, no further consultation is required under section 106 of the National Historic Preservation Act.

III. Finding of No Significant Impact

The NRC staff has prepared this EA in support of the proposed action. On the basis of this EA, the NRC finds that there are no significant environmental impacts from the proposed action, and that preparation of an environmental impact statement is not warranted. Accordingly, the NRC has determined that a Finding of No Significant Impact is appropriate.
