

availability of a draft guidance for industry entitled "The Use of Mechanical Calibration of Dissolution Apparatus 1 and 2 – Current Good Manufacturing Practice (CGMP)." The draft guidance is intended to aid drug manufacturers and ancillary testing laboratories in using mechanical calibration as an alternate approach to the use of calibrator tablets in calibrating an apparatus used for dissolution testing. The guidance provides references to information on critical tolerances that should be achieved with mechanical calibration.

DATES: Although you can comment on any guidance at any time (see 21 CFR 10.115 (g)(5)), to ensure that the agency considers your comment on this draft guidance before it begins work on the final version of the guidance, submit written or electronic comments on the draft guidance by January 17, 2008.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled "The Use of Mechanical Calibration of Dissolution Apparatus 1 and 2 – Current Good Manufacturing Practice (CGMP)." FDA regulations require that laboratory apparatus be calibrated at suitable intervals in accordance with established written specifications (21 CFR 211.160(b)(4)). Historically, both chemical and mechanical means have been used in calibrating dissolution apparatuses. Since 1978, chemical calibration has been the predominant method of calibration, consistent with chapter 711 of the U. S. Pharmacopeia

(USP), which describes the use of calibrator tablets. Chemical calibration of an apparatus is usually performed, in addition to mechanical calibration, every 6 months. Because the use of USP chemical calibration tablets can lead to variability in the dissolution measurement system, FDA is providing guidance on mechanical calibration as an alternate approach to calibrating dissolution equipment. As stated in the draft guidance, instead of using an external calibrator tablet, a firm can use an appropriately rigorous method of mechanical calibration as an alternative to ensure ongoing acceptability of the dissolution apparatus.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the agency's current thinking on the use of mechanical calibration of dissolution apparatus 1 and 2 as related to CGMP. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statutes and regulations.
