CFDA. 11.616, Technology Innovation Program.

Program Description. TIP is soliciting proposals under this fiscal year 2009 competition in two areas of critical national need entitled "Civil Infrastructure" and "Manufacturing" as described below.

Area of Critical National Need 1: Civil Infrastructure

The objective of this competition is to provide civil infrastructure managers with tools to better manage the structural integrity of elements of the civil infrastructure. Two elements of the societal challenge of managing the Structural Integrity of the United States' Infrastructure will be addressed as outlined in the white paper "Advanced Sensing Technologies and Advanced Repair Materials for the Infrastructure: Water Systems, Dams, Levees, Bridges, Roads, and Highways" (http://www.nist.gov/tip/comp09_home.html).

Solutions to this societal challenge require advancement beyond the current practice and state-of-the-art of sensing technologies and repair/retrofit technologies. Sensing advancements are needed to assess the structural integrity and/or deterioration processes of water mains, wastewater collection systems, dams, levees, navigation lock structures, bridges, roads, and highways. Sensing technologies must be more accurate in their determinations of structural integrity, easier to use, and more economically feasible. The increased information obtained from new sensing technologies will lead to better prioritization of repair schedules; however, prioritization is only the first
