**Title:** Cooling Water Intake Structures at Phase III Facilities (Renewal).

**ICR Number:** EPA ICR No. 2169.04, OMB Control No. 2040-0268.

The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

**Abstract:** The Section 316(b) regulation for Phase III facilities requires the collection of information from new offshore oil and gas extraction facilities which use a cooling water intake structure(s) that uses at least 25 percent of the water it withdraws for cooling purposes, and have design intake flows greater than 2 MGD. Section 316(b) of the Clean Water Act (CWA) requires that any standard established under section 301 or 306 of the CWA and applicable to a point source must require that the location, design, construction and capacity of cooling water intake structure(s) at that facility reflect the best technology available for minimizing adverse environmental impact. Such impact occurs as a result of impingement (where fish and other aquatic life are trapped on technologies at the entrance to cooling water intake structures) and entrainment (where aquatic organisms, eggs, and larvae are taken into the cooling system, passed through the heat exchanger, and then pumped back out with the discharge from the facility). The rule contains requirements applicable to the location, design, construction, and capacity of cooling water intake structures at new offshore oil and gas extraction facilities. These requirements seek to establish the best technology available for minimizing adverse environmental
