**SUPPLEMENTARY INFORMATION:** Dioxin and dioxin like compounds (DLCs), including polychlorinated dibenzodioxins (PCDDs), polychlorinated dibenzofurans (PCDFs), and polychlorinated biphenyls (PCBs), are structurally and toxicologically related halogenated dicyclic aromatic hydrocarbons. Dioxins and DLCs are released into the environment from several industrial sources, including chemical manufacturing, combustion, and metal processing. There is global contamination of air, soil and water with trace levels of these compounds that typically occur in the environment as chemical mixtures. Dioxins and DLCs do not readily degrade; therefore, levels persist in the environment, build up in the food chain and accumulate in the tissues of animals. Human exposures to these compounds occur primarily through eating contaminated foods. The health effects from exposures to dioxins and DLCs have been documented extensively in toxicological and epidemiological studies.

Risk assessments have relied on the dioxin toxicity equivalence factors (TEFs) approach. Various stakeholders, inside and outside the Agency, have called for a more comprehensive characterization of risks; therefore, EPA's Risk Assessment Forum (RAF) identified a need to examine the recommended approach for application of the toxicity equivalence methodology in human health risk assessments. An RAF Technical Panel developed the draft guidance document, "Recommended Toxicity Equivalency Factors (TEFs) for Human Health Risk

Assessments of Dioxin and Dioxin-Like Compounds," to assist EPA scientists in using this methodology to assess health risks from dioxins and dioxin-like compounds, as well as inform EPA decision makers, other agencies, and the public about this methodology. EPA is currently addressing several issues related to dioxins and dioxin-like chemicals in the environment. More information on these activities is located at: <http://cfpub.epa.gov/ncea/CFM/nceaQFind.cfm?keyword=Dioxin>.

The draft document under review describes EPA's updated approach for evaluating the human health risks from exposures to environmental media containing dioxin-like compounds. It recommends the use of consensus TEF values for 2,3,7,8-tetrachlorodibenzo-p-dioxin and dioxin-like compounds, which were published in 2005 by the World Health Organization, and adopted by EPA in 2008 for ecological risk assessments.

The draft document was developed by the EPA's Risk Assessment Forum with extensive input from scientists throughout the Agency. The draft document summarizes the toxicity equivalence methodology, provides background information and assumptions on how the methodology has evolved, and provides health risk assessors with a recommended approach for application. It will assist EPA scientists in using the toxicity equivalence methodology to assess health risks from dioxins and dioxin-like compounds, as well as inform EPA decision makers, other agencies, and the public about this methodology.

The FCC, working in conjunction with the U.S. Customs Service is responsible for the regulation of both authorized radio services and devices that can cause harmful interference. FCC Form 740 must be completed for each radio frequency device which is being imported into the United States, and is used to keep non-compliant devices from being distributed to the general public, thereby reducing the potential for harmful interference being caused to authorized communications.

FCC Form 740 is submitted to the U.S. Customs Service and Border Patrol electronically or in paper format. The FCC Form 740 is not submitted to the Federal Communications Commission. When a violation is discovered, the FCC can issue a fine. If a product is suspected of illegal entry, the FCC works with U.S. Customs Service to resolve the issue.
