

and administration of assessments for each content area that are valid and reliable, and that enable students to demonstrate their knowledge and skills in core academic areas. Innovative assessment designs and uses of technology have the potential to be inclusive of more students. How would you propose we take this into account?

Technology & Innovation in Assessment

(1) Propose how you would recommend that different innovative technologies be deployed to create better assessments, and why. Please include illustrative examples in areas such as novel item types, constructed response scoring solutions, uses of mobile computing devices, and so on.

(2) We envision the need for a technology platform for assessment development, administration, scoring, and reporting that increases the quality and cost-effectiveness of the assessments. Describe your recommendations for the functionality such a platform could and should offer.

(3) How would you create this technology platform for summative assessments such that it could be easily adapted to support practitioners and professionals in the development, administration, and/or scoring of high-quality interim assessments?

(4) For the technology "platform" vision you have proposed, provide estimates of the associated development and ongoing maintenance costs, including your calculations and assumptions behind them.

Project Management

(1) Provide estimates of the development, maintenance, and administration costs of the assessment system you propose, and your calculations and assumptions behind them.

(2) Describe the range of development and implementation timelines for your proposed assessment system, from the most aggressive to more conservative, and describe the actions that would be required to achieve each option.

(3) How would you recommend organizing a consortium to achieve success in developing and implementing the proposed assessment system? What role(s) do you recommend for third parties (e.g., conveners, project managers, assessment developers/partners, intermediaries)? What would you recommend that a consortium demonstrate to show that it has the capacity to implement the proposed plan?
