

enhancement of the quality of some or all of the waters within such States require greater environmental protection, such State may completely prohibit the discharge from all vessels of any sewage, whether treated or not, into such waters, except that no such prohibition shall apply until the Administrator determines that adequate facilities for the safe and sanitary removal and treatment of sewage from all vessels are reasonably available for such water to which such prohibition would apply.

The total vessel population for these three counties (2009 data) is 28,400. This number reflects active vessel registrations and was obtained from the North Carolina Wildlife Resources Commission (inactive registrations were not included in these figures). It is recognized that only a small percent of the vessels in the coastal waters of Brunswick and Pender Counties are equipped with a Marine Sanitation Device (MSD). To estimate the number of MSDs in use, percentages obtained from EPA Region 2 were applied and are as follows:

Boat Length < 16'	8.3% with MSDs.
Boat Length 16'-25' ..	10.6% with MSDs.
Boat Length 26'-40' ..	78.5% with MSDs.
Boat Length > 40'	82.6% with MSDs.

In applying these percentages an estimated 3,888 MSDs are in use by registered boats within the proposed NDZ.

According to the New Hanover County NDZ Application submitted to EPA, the number of transient boats serviced by marinas in New Hanover County was calculated to be approximately 180 per month. Assuming similar numbers of transient boats for Brunswick and Pender Counties, the total number of transient boats for Brunswick, Pender, and New Hanover Counties would be 540. Using the figures for both county and transient boats, the total number of MSDs in these waters is estimated to be 4,428. There are 12 marinas within this area, and this yields a ratio of about 369 boats per pumpout facility. This figure does not include the 4 marinas that are located within 5 nm of this proposed NDZ area.

All vessel pumpout facilities that are described either discharge into State

approved waste treatment systems, or the waste is collected into a large holding tank for transport to a sewage treatment plant. Thus all vessel sewage will be treated to meet existing standards for secondary treatment.

Based on the examination of this petition, its supporting documentation, and public response, EPA concurs with the State of North Carolina's determination that adequate and reasonably available facilities for the safe and sanitary removal and treatment of sewage from all vessels are present in the described area going from the South Carolina/North Carolina State line to the northern boundary of the Pender County line in North Carolina, with the inland limit of the NDZ in the Cape Fear River being the waterway known as Snow's Cut (Snow's Cut entrance to Cape Fear River located from 34°3'5.8962" N; 77°55'4.8966" W to 34°3'4.5216" N 77°56'37.086" W), and 3 nm out into the Atlantic Ocean, and therefore this area is designated as a NDZ.

Acting Regional Administrator, Region 4.
