

most recently approved ICR are due to an increase in the number of expected respondents and use of recently available labor rates. There is no change in the calculation methodology for labor hours and Agency costs in this ICR compared to the previous ICR due to two considerations: (1) The regulations have not changed over the past three years and are not anticipated to change over the next three years; and (2) the growth rate for the respondents is very low. There have been no program changes.

Title: NESHP for Marine Tank Vessel Loading Operations (Renewal).

ICR Numbers: EPA ICR Number 1679.07, OMB Control Number 2060-0289.

ICR Status: This ICR is schedule to expire on July 31, 2011. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is

pending at OMB. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in both 40 CFR part 9 and 48 CFR chapter 15, and displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain-EPA regulations is consolidated in 40 CFR part 9.

Abstract: The National Emissions Standards for Hazardous Air Pollutants (NESHP) for Marine Tank Vessel Loading Operations were proposed on May 13, 1994, promulgated on September 19, 1995, and a proposed amendment on October 21, 2010 was promulgated on April 21, 2011.

These regulations apply maximum achievable control technology (MACT) standards to existing facilities and new facilities that load marine tank vessels with petroleum or gasoline and have aggregate actual Hazardous Air Pollutants (HAP) emissions of 10 tons or more of HAP, or 25 tons or more of all HAP combined. In addition, these regulations apply reasonably available control technology (RACT) standards to facilities with an annual throughput of 10 million or more barrels of gasoline or 200 million or more barrels of crude oil. This ICR also covers owners or operators of existing marine tank vessel loading operations (MTVLO) that emit less than 10 tons per year of each individual HAP, and less than 25 tons/year of all HAP combined, located at major sources of HAP that loads more than 1 million barrels/yr of gasoline, as well as owners or operators of existing off-shore terminals that load gasoline.

Owners or operators of marine tank vessel loading facilities subject to the rule must maintain a file of these measurements, and retain the file for at least five years following the date of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there is no such delegated authority, the reports are sent directly to the EPA regional office. This information is being collected to assure compliance with 40 CFR part 63, subpart Y and 40 CFR part 63, subpart A, as authorized in section 112 and 114(a) of the Clean Air Act. The required information consists of emissions data and other information that have been determined to be private.

In order to ensure compliance with these standards, adequate reporting and recordkeeping are necessary. In the absence of such information, enforcement personnel would be unable to determine whether the standards are being met on a continuous basis, as required by the Clean Air Act.

Burden Statement: The annual public reporting and recordkeeping burden for this collection of information is estimated to average 12 hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purpose of collecting, validating, and verifying information, processing and maintaining, information, and disclosing and providing information. All existing ways will have to adjust to comply with any previously applicable instructions and requirements that have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

Respondents/Affected Entities: Marine tank vessel loading operations.

Estimated Number of Respondents: 804.

Frequency of Response: Initially, occasionally, annually, and semiannually.

Estimated Total Annual Hour Burden: 9,872.

Estimated Total Annual Cost: \$926,209, which includes \$926,209 in labor costs, no capital/startup costs, and no operation and maintenance (O&M) costs.

There is no increase in the number of affected facilities or the number of responses as compared to the previous ICR. There is, however, an increase in the estimated burden cost as currently identified in the OMB Inventory of Approved Burdens. The change in burden cost is due to the use of a more recent labor rates.

Dated: July 21, 2011.

Director, Collection Strategies Division.
