SUPPLEMENTARY INFORMATION:

I. Background

The O*NET Data Collection Program is an ongoing effort to collect and maintain current information on the detailed characteristics of occupations and skills for more than 900 occupations. The resulting database provides the most comprehensive standardized source of occupational and skills information in the nation. O*NET information is used by a wide range of audiences, including individuals making career decisions, public agencies and schools providing career exploration services or education and training programs, and businesses making staffing and training decisions. The O*NET system provides a common language, framework and database to meet the administrative needs of various federal programs, including workforce investment and training programs supported by funding from the Departments of Labor, Education, and Health and Human Services.

Section 309 of the Workforce Investment Act requires the Secretary of Labor to oversee the "development, maintenance, and continuous improvement of a nationwide employment statistics system" which shall include, among other components, "skill trends by occupation and industry." The O*NET database provides:

- Detailed information for more than 900 occupations.
- Descriptive information using standardized descriptors for skills, abilities, interests, knowledge, work values, education, training, work context, and work activities.

- Occupational coding based on the 2010 Standard Occupational Classification (SOC) system.

The O*NET electronic database and related O*NET products and tools have been incorporated into numerous public and private sector products and resources, summarized at <http://www.onetcenter.org/paw.html>. These products in turn serve millions of customers.
