

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 54

[WC Docket No. 13–184; FCC 13–100]

Modernizing the E-Rate Program for Schools and Libraries

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: In this document, the Federal Communications Commission (Commission) initiates a thorough review and update of the E-rate program (more formally known as the schools and libraries universal service support mechanism), building on reforms adopted in 2010 as well as the Commission's reforms of each of the other universal service programs. The Commission takes this step because there is a growing chorus of calls to build on the success of the E-rate program by modernizing the program and adopting clear forward-looking goals aimed at efficiently and effectively ensuring high-capacity connections to schools and libraries nationwide.

DATES: Comments are due on or before September 16, 2013, and reply comments are due on or before October 16, 2013. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: You may submit comments, identified by WC Docket No. 13–184, by any of the following methods:

- **Federal eRulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments.
- **Federal Communications Commission's Web site:** <http://fjallfoss.fcc.gov/ecfs2/>. Follow the instructions for submitting comments.
- **People with Disabilities:** Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: FCC504@fcc.gov or phone: (202) 418–0530 or TTY: (202) 418–0432.

For detailed instructions for submitting comments and additional information on the rulemaking process, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Regina Brown, Wireline Competition Bureau, (202) 418–0792, or James Bachtell, Wireline Competition Bureau, (202) 418–2694, or TTY: (202) 418–0484.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Further Notice of Proposed Rulemaking (NPRM) in WC Docket No. 13–184, FCC 13–100, adopted July 19, 2013, and released July 23, 2013. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street, SW., Room CY–A257, Washington, DC 20554. The document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc. (BCPI), 445 12th Street, SW., Room CY–B402, Washington, DC 20554, telephone (800) 378–3160 or (202) 863–2893, facsimile (202) 863–2898, or via the Internet at <http://www.bcpiweb.com>. It is also available on the Commission's Web site at <http://www.fcc.gov>.

We invite comment on the issues and questions set forth in the NPRM and IRFA contained herein. Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments on this NPRM by September 16, 2013 and may file reply comments by October 16, 2013. *All filings related to this NPRM shall refer to WC Docket No. 13–184.* Comments may be filed using the Commission's Electronic Comment Filing System (ECFS) or by filing paper copies. *See Electronic Filing of Documents in Rulemaking Proceedings*, 63 FR 24121, May 1, 1998.

- **Electronic Filers:** Comments may be filed electronically using the Internet by accessing the ECFS: <http://fjallfoss.fcc.gov/ecfs2/>.

- **Paper Filers:** Parties who choose to file by paper must file an original and one copy of each filing.

- Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW., Room TW–A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes and boxes must be disposed of *before* entering the building.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington DC 20554.

People with Disabilities. To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer & Governmental Affairs Bureau at (202) 418–0530 (voice), (202) 418–0432 (tty).

In addition, one copy of each paper filing must be sent to each of the following: (1) the Commission's duplicating contractor, Best Copy and Printing, Inc., 445 12th Street SW., Room CY–B402, Washington, DC 20554; Web site: www.bcpiweb.com; phone: (800) 378–3160; (2) Lisa Hone, Telecommunications Access Policy Division, Wireline Competition Bureau, 445 12th Street SW., Room 6–A326, Washington, DC 20554; email: Lisa.Hone@fcc.gov; and (3) Charles Tyler, Telecommunications Access Policy Division, Wireline Competition Bureau, 445 12th Street SW., Room 5–A452, Washington, DC 20554; email: Charles.Tyler@fcc.gov.

Filing and comments are also available for public inspection and copying during regular business hours at the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY–A257, Washington, DC 20554. Copies may also be purchased from the Commission's duplicating contractor, BCPI, 445 12th Street, SW., Room CY–B402, Washington, DC 20554. Customers may contact BCPI through its Web site: www.bcpi.com, by email at fcc@bcpiweb.com, by telephone at (202) 488–5300 or (800) 378–3160 or by facsimile at (202) 488–5563.

Comments and reply comments must include a short and concise summary of the substantive arguments raised in the pleading. Comments and reply comments must also comply with § 1.49 and all other applicable sections of the Commission's rules. We direct all interested parties to include the name of the filing party and the date of the filing on each page of their comments and reply comments. All parties are encouraged to utilize a table of contents, regardless of the length of their submission. We also strongly encourage parties to track the organization set forth in the NPRM in order to facilitate or internal review process.

For additional information on this proceeding, contact Regina Brown at (202) 418–0792 or James Bachtell at (202) 418–2694 in the Telecommunications Access Policy Division, Wireline Competition Bureau.

I. Introduction

1. In this Notice of Proposed Rulemaking (NPRM), we initiate a thorough review and update of the E-rate program (more formally known as the schools and libraries universal service support mechanism), building on reforms adopted in 2010 as well as the Commission's reforms of each of the other universal service programs. During the past 15 years, the financial support provided by the E-rate program has helped revolutionize schools' and libraries' access to modern communications networks. E-rate-supported Internet connections are crucial for learning and for the operation of modern schools and libraries. Increasingly, schools and libraries require high-capacity broadband connections to take advantage of digital learning technologies that hold the promise of substantially improving educational experiences and expanding opportunity for students, teachers, parents and whole communities. As a result, there is a growing chorus of calls to build on the success of the E-rate program by modernizing the program and adopting clear forward-looking goals aimed at efficiently and effectively ensuring high-capacity connections to schools and libraries nationwide.

2. E-rate has been instrumental in ensuring our schools and libraries have the connectivity necessary to enable students and library patrons to participate in the digital world. When Congress passed the Telecommunications Act of 1996 authorizing the creation of the E-rate program, only 14 percent of classrooms had access to the Internet, and most schools with Internet access (74 percent) used dial-up Internet access. By 2005, nearly all schools had access to the Internet, and 94 percent of all instructional classrooms had Internet access. Similarly, by 2006, nearly all public libraries were connected to the Internet, and 98 percent of them offered public Internet access. The challenge we now face is modernizing the program to ensure that our nation's students and communities have access to high-capacity broadband connections that support digital learning while making sure that the program remains fiscally responsible and fair to the consumers and businesses that pay into the universal service fund (USF or Fund).

3. In schools, high-capacity broadband connectivity, combined with cutting-edge educational tools and content, is transforming learning by providing customized teaching opportunities, giving students and

teachers access to interactive content, and offering assessments and analytics that provide students, their teachers, and their parents, real-time information about student performance. High-capacity broadband is also expanding the boundaries of our schools by allowing for interactive and collaborative distance learning applications, providing all students—from rural communities to inner cities—access to high-quality courses and expert instruction, no matter how small a school they attend or how far they live from experts in their field of study. High-capacity broadband platforms and the educational options they enable are particularly crucial for providing all students, in both rural and urban communities, customized and personalized education and access to cutting-edge learning tools in the areas of science, technology, engineering and math (STEM) education, thus preparing our students to compete in the global economy.

4. In libraries, high-capacity broadband access provides patrons the ability to search for and apply for jobs; learn new skills; interact with federal, state, local, and Tribal government agencies; search for health-care and other crucial information; make well-informed purchasing decisions; engage in life-long learning; and stay in touch with friends and family. In Idaho, for example, the state agency's Libraries Linking Idaho database portal, available in all Idaho libraries, provides essential resources to library patrons such as an online video encyclopedia and a program to provide tools for test preparation and skill-building. Additionally, the Chicago Public Library's YOUmedia and The Labs at the Carnegie Library of Pittsburgh offer young people an opportunity to produce rich, multi-media products using the latest technology tools while connecting these learning experiences directly back to school and careers. Further, the Howard County Public Library in Maryland houses a Learning Lab to engage young adults in using new and emerging media and technology. Libraries are uniquely important because they provide Internet access to all residents in communities they serve. In addition, libraries support distance learning and continuing education for college and adult students.

5. There is strong evidence and growing consensus that E-rate needs to sharpen its focus and provide schools and libraries with high-capacity broadband connections. In response to a 2010 Commission survey of E-rate funded schools and libraries, only 10 percent of survey respondents reported

broadband speeds of 100 Mbps or greater, while 48 percent reported broadband speeds of less than 10 Mbps. Approximately 39 percent of the respondents cited cost of service as a barrier in meeting their needs, and 27 percent cited cost of installation as a barrier.

6. Likewise, although the speeds of library connections have been increasing over time, many libraries report that speeds are insufficient to meet their growing needs. An annual survey done by the American Library Association (ALA) shows that in 2011–2012, while 9 percent of libraries reported connection speeds of greater than 100 Mbps, 25 percent of libraries still have speeds of 1.5 Mbps or less, and approximately 62 percent of libraries reported connection speeds of 10 Mbps or less. Thus, notwithstanding the trend towards faster speeds, 41 percent of libraries reported that their speeds fail to meet their patrons' needs some or most of the time.

7. Last month, President Obama announced the ConnectED initiative aimed at connecting all schools to the digital age. The ConnectED initiative seeks to connect schools and libraries serving 99 percent of our students to next-generation high-capacity broadband (with speeds of no less than 100 Mbps and a target speed of 1 Gbps) and to provide high-capacity wireless connectivity within those schools and libraries within five years. President Obama has called on the Commission to modernize and leverage the E-rate program to help meet those targets. Teachers, local school officials, state education leaders, digital learning experts, and businesses from across the country endorsed President Obama's vision and have called for an update to the E-rate program to meet today's teaching and learning needs.

8. In voicing his support for President Obama's ConnectED initiative, Senator John D. Rockefeller IV, one of the original supporters of the E-rate program, explained: "[I]n its almost two decades, the E-Rate program has fundamentally transformed education in this country—we have connected our most remote schools and libraries to the world. But as impressive and important as the E-Rate program has been, basic Internet connectivity is no longer sufficient to meet our 21st Century educational needs." Even more recently, the bipartisan Leading Education by Advancing Digital (LEAD) Commission has taken up the call and released a blue print for paving a path to digital learning in the United States which highlights "inadequate high-speed Internet connectivity in the classrooms"

as “the most immediate and expensive barrier to implementing technology in education,” and calls modernizing E-rate the “centerpiece of solving the infrastructure challenge.”

9. The need for E-rate reform is also clear given the extraordinary demand for existing E-rate support. For this funding year, schools and libraries sought E-rate funding in excess of \$4.9 billion, more than twice the annual cap of \$2.25 billion. The E-rate funding cap was set by the Commission when it created the E-rate program in 1997 and demand for funds has exceeded the cap every year since the inception of the program. Moreover, technology is constantly evolving, so to be most effective, the E-rate program must evolve to meet the current and future needs of schools and libraries. Therefore, in this NPRM, we seek to modernize E-rate to ensure that it can most efficiently and effectively help schools and libraries meet their connectivity needs over the course of the rest of this decade and the next.

10. Three years ago, the Commission took important initial steps to modernize E-rate to improve efficiency and respond to the increasing technological needs of schools and libraries in response to recommendations made in the National Broadband Plan. The reforms, adopted in the *Schools and Libraries Sixth Report and Order*, 75 FR 75393, December 3, 2010, focused on: (1) Providing greater flexibility to schools and libraries in their selection of the most cost-effective broadband services; (2) streamlining the E-rate application process; and (3) improving safeguards against fraud, waste, and abuse. Among other things, the Commission allowed schools and libraries to lease dark fiber from any entity, including state, municipal or regional research networks and utility companies; made permanent a rule to allow schools to open their facilities to the public when schools are not in session so that community members may use the school’s E-rate supported services on the school’s campus; and established the Learning On-The-Go (also known as E-rate Deployed Ubiquitously (EDU) 2011) pilot program to investigate the merits and challenges of wireless off-premises connectivity services for mobile learning devices.

11. In this NPRM, we seek comment on ways to build on these steps and more comprehensively modernize E-rate, including improving the efficiency and administration of the program. We begin by proposing explicit program goals and seeking comment on specific ways to measure our progress towards

meeting those goals. During the last two years, the Commission has established goals and measures as part of modernizing the three other universal service support programs. Today, we propose to do the same for the E-rate program. We then seek comment on a number of possible approaches to achieving each of our proposed goals.

12. Thus, the balance of this NPRM is organized into the following six sections:

- In Section II, we propose three goals for the E-rate program:

- (1) Ensuring schools and libraries have affordable access to 21st Century broadband that supports digital learning;

- (2) Maximizing the cost-effectiveness of E-rate funds; and

- (3) Streamlining the administration of the E-rate program.

We also propose to adopt measures for each of the proposed goals.

In proposing to adopt specific goals and measures, we seek to focus available funds on the highest communications priorities for schools and libraries and, over time, to determine whether E-rate funds are effectively targeted to meet those goals.

- In section III, we focus on the first proposed goal and seek comment on ways to modernize and reform the E-rate program to better ensure eligible schools and libraries have affordable access to high-capacity broadband. First, we propose to focus E-rate funds on supporting high-capacity broadband to and within schools and libraries, and we seek comment on updating the list of services eligible for E-rate support. Second, we seek comment on various options for ensuring equitable access to limited E-rate funding. Finally, we seek comment on what other measures we could take if these steps, combined with the other efficiency measures proposed elsewhere in this NPRM, appear insufficient to meet our program goals. In particular, we seek comment on potential options to focus additional state, local, and federal funding on school connectivity and to lower the costs of new high-capacity broadband deployment to schools and libraries.

- In section IV, we focus on the second proposed goal and seek comment on maximizing the cost-effectiveness of E-rate purchases, including how we can encourage increased consortium purchasing; create bulk buying opportunities; increase transparency of spending and prices; amend the competitive bidding processes; and encouraging efficient use of funding. We also seek comment on a pilot program to incent and test more efficient purchasing practices.

- In section V, we focus on the third proposed goal and seek comment on ways to streamline the administration of the E-rate program by, among other things, requiring electronic filing of all documents with the E-rate program Administrator, the Universal Service Administrative Company (USAC); increasing transparency of USAC’s processes; speeding USAC’s review of E-rate applications; simplifying the eligible services list; finding more efficient ways to disburse E-rate funds; addressing unused E-rate funding; and streamlining the E-rate appeals process.

- In section VI, we seek comment on several additional issues relating to the E-rate program that have been raised by stakeholders, including issues related to school and library obligations under the Children’s Internet Protection Act (CIPA); identifying rural schools and libraries; changes to the National School Lunch Program; fraud protection measures; use of E-rate supported services for community Wi-Fi hotspots; and procedures for dealing with national emergencies.

In seeking comment on our proposed goals and measures, and on options to modernize E-rate to better align it with these goals, in addition to specific questions posed throughout, we encourage input from Tribal governments and ask generally whether there are any unique circumstances on Tribal lands that would necessitate a different approach. Similarly, we request comment on whether there are any unique circumstances in insular areas that would necessitate a different approach.

II. Goals and Measures

A. Ensuring Schools and Libraries Have Affordable Access to 21st Century Broadband That Supports Digital Learning

1. Proposed Goal

13. The first goal of the E-rate program we propose to adopt is to ensure that schools and libraries have affordable access to 21st Century broadband that supports digital learning. As discussed above, the communications priorities of schools and libraries have shifted as they seek access to higher-speed connectivity and to allow students and teachers to take advantage of the rapidly expanding opportunities for interactive digital learning.

14. Section 254(h) of the Act, requires the Commission to enhance access to advanced telecommunications and information services to schools and libraries “to the extent technically feasible and economically reasonable,” and determine a discount level for all E-

rate funded services that is “appropriate and necessary to ensure affordable access to and use of such services.” Thus, in considering our statutory obligations and in light of the growing technological needs of schools and libraries, this proposed goal has two components. The first component of this proposed goal requires that all schools and libraries have access to high-capacity broadband connectivity necessary to support digital learning. The second component of this goal is that schools and libraries be able to afford such services.

15. We also seek comment on whether we should adopt specific goals for other communications services, including voice services. If so, what should those goals be and how can we best harmonize those goals with our proposed goal of ensuring schools and libraries have access to 21st Century broadband that supports digital learning?

2. Proposed Measurements

16. We seek comment on what performance measure or measures we should adopt to support our proposed goal of ensuring eligible schools and libraries have affordable access to high-capacity broadband at speeds that will support digital learning. We also seek comment on how best to perform the relevant measurements.

17. One of the primary measures of progress towards meeting this goal would be benchmarking the performance of schools’ and libraries’ broadband connections against specific speed targets. We also seek comment on other measures of the availability and affordability of high-capacity broadband to schools and the educational impact of high-capacity broadband in the classroom. We seek comment on whether these are the areas on which we should focus in measuring progress towards this goal. We also seek comment on how other network performance measurement efforts, including the Commission’s own Measuring Broadband America Program, should inform our consideration of how to measure network performance. Commenters are encouraged to propose any additional or alternative measures.

18. *Connectivity metrics.* We seek comment on how to define “broadband that supports digital learning” for purposes of measuring progress toward our first goal. President Obama’s ConnectedED initiative set a target of at least 100 Mbps service with a target of 1 Gbps to most schools and libraries within 5 years. The ConnectedED proposals are consistent with those made by the State Education

Technology Directors Association (SETDA). According to SETDA, in order to have sufficient broadband access for enhanced teaching and learning, K–12 schools will need Internet connections of at least 100 Mbps per 1,000 students and staff (users) by the 2014–15 school year and at least 1 Gbps Internet access per 1,000 users by the 2017–18 school year.

19. We seek comment on adopting the SETDA target of ensuring that schools have 100 Mbps per 1,000 users increasing to 1 Gbps per 1,000 users. SETDA also recommends that a school within a district have Wide Area Network (WAN) connectivity to other schools within their district of at least 10 Gbps per 1,000 students and staff by 2017–2018. We also seek comment on adopting that target for WAN connectivity.

20. More specifically, we seek comment on whether the SETDA targets are appropriate for all schools, or whether we should set some other minimum levels of broadband speed necessary to meet our proposed goal, and what those levels should be. How much capacity do schools currently use? How are schools’ bandwidth needs changing, particularly in those schools that have one-to-one device initiatives? We also seek comment on what our goals should be for schools or school districts with less than 1,000 students and staff if we do adopt the SETDA targets. Will schools with 500 students need 500 Mbps Internet capacity, and how much WAN connectivity will they need? How about schools with 100 students? We also seek comment on the timing of reaching these proposed bandwidth targets for schools. What percent of schools currently have 100 Mbps per 1,000 users? What percent of schools currently have 1 Gbps per 1,000 users? How quickly are schools already moving towards these targets? What percent of schools currently have fiber connectivity to the school? How much would it cost to reach these targets? What are the challenges for schools and the E-rate program in meeting these targets?

21. We also seek comment on the appropriate bandwidth target for libraries. According to the Gates Foundation, the State Library of Kansas has developed a broadband capacity tool that recommends that all libraries have a minimum of 1 Gbps Internet connectivity by 2020 and recognizes that libraries with a large number of connected users will likely need even greater capacity. We seek comment on whether a target of 1 Gbps for all libraries by 2020 is an appropriate measure or whether we should set some

other minimum level of broadband speed for libraries necessary to meet our proposed measure and what that should be. We also seek comment on whether we should adopt a WAN connectivity target for libraries interconnected by WANs, and if so, what that target should be. We also seek comment on the target date of 2020 for libraries to have 1 Gbps Internet connectivity. What are the challenges to libraries and the E-rate program of meeting this goal? What percent of libraries currently have 100 Mbps connectivity? What percent of libraries currently have 1 Gbps connectivity?

22. Further, we seek comment on whether there are schools and libraries in some extremely remote parts of our country where the SETDA and the State Library of Kansas capacity targets may not be economically feasible. If so, why are the SETDA or the State Library of Kansas targets unfeasible and what are feasible connectivity targets or benchmarks for those extremely remote geographic areas?

23. As part of the ConnectedED initiative, President Obama also called for high-capacity connectivity within schools, and others, including the bipartisan LEAD Commission, have echoed that proposal. We seek comment on adopting specific bandwidth targets for wireless connectivity within schools, similar to our targets for Internet and WAN bandwidth. Specifically, we seek comment on whether all schools should have internal wireless networks capable of supporting one-to-one device initiatives, and whether libraries should have comparable wireless connectivity. We seek comment on more quantitatively defining these standards. Should we define connectivity in Mbps of wireless capacity available per-student in classrooms, school libraries, and other areas of schools? Should these match the Internet or WAN connectivity recommendations of SETDA? For example, building off SETDA’s 2017 recommendation of 100 Mbps Internet connectivity per 1000 students, should we aim for 1 Mbps of wireless capacity per 10 students in classrooms and other learning spaces? What would this standard generally require to implement? We seek comment on this proposal and on alternative bandwidth targets.

24. Many of the applications that enable digital learning require not just high-capacity connections, but also high-quality connections that have associated latency, jitter and packet loss requirements. For example, online viewing of a real-time science lecture and demonstration requires low latency (transmission delay), low jitter

(variability in the timing of packets' arrival), and low packet loss. Should we adopt latency, jitter and packet loss performance requirements tailored to the specific uses of broadband connectivity by schools and libraries to ensure successful learning experiences? If so, what such requirements should be? We also seek comment on how best to update network performance requirements as technology and network uses evolve.

25. *Using adoption to measure availability and affordability.* The simplest measure of broadband availability and affordability for schools and libraries may observe whether eligible schools and libraries are purchasing broadband services that meet our proposed speed benchmarks. We therefore seek comment on whether to measure school and library broadband speeds as one metric of broadband availability and affordability.

26. If we adopt this proposal, we seek comment on how best to collect data on the speed and quality of school and library connections. Currently, all schools and libraries must complete an FCC Form 471 application when applying for E-rate funding, and among other things, are requested to provide information about the level of broadband services requested on that form. The Commission is currently seeking comment on modifying the FCC Form 471 to collect more detailed information from applicants on connection speeds and the types of technologies being used for connectivity.

27. We seek comment on additional ways to update the FCC Form 471 to provide information necessary to monitor and measure our proposed goal. Should we require that E-rate applicants provide specific information about the bandwidth or speed for which they seek funding? Should we make that information publicly available? Should there be specific, required mechanisms for making the information public? For example, should we require such information be published on data.gov?

28. Should we adopt additional measures based on information we gather? For example, should we measure the difference in each school's or library's baseline capacity and speed for each workstation or device over a specified time period?

29. We seek comment on whether there are other methods we should consider adopting for measuring broadband performance, including not only bandwidth available but actual usage as well. We also seek comment on how measuring actual usage would take into account the different possible

reasons for level of usage. For example, how would such a measurement account for schools that use broadband connections less because the speeds available are too slow for use of educational software or other reasons? In addition, how do we account for levels of usage that vary based on the availability of teacher technology training? In addition to collecting information on the FCC Form 471, should we conduct an annual or biennial survey to assess the broadband capability of schools and libraries? If so, should it be modeled on the survey of E-rate recipients that the Commission conducted in 2010?

30. In the alternative, should we require some or all E-rate applicants to have dedicated equipment measuring performance to and within each of their buildings? If so, what would be the cost of such a requirement and what would be the benefits? Should we require applicants to pay for such equipment or provide E-rate support for such equipment and the related information collection? Should we make the collected information available to the public? We ask for recommendations on performance measurement systems that are low cost and of minimal burden; easy to implement; low-impact; that will produce uniform results and test a full range of performance metrics; and that include a proven design and are generally accepted as valid testing.

31. Are there other less burdensome methods that would still ensure we are able to examine and employ useful information in lieu of requiring all applicants to employ equipment to test broadband? For example, could we test a sample of schools? Are most schools and libraries or their service providers already measuring the speed of their broadband connections? Are there cost-efficient ways of collecting that information from schools and libraries? Several years ago, the Commission created the Measuring Broadband America Program to measure residential broadband performance. Should we adopt a national performance measurement system for schools and libraries similar to our Measuring Broadband America Program? If so, how could we accommodate measuring not only average or peak performance but also actual usage? We recognize that some third parties are already attempting to collect some such information. For example, Education Superhighway is encouraging schools to participate in its national School Speed Test program. Are there ways the Commission can use the information collected by Education Superhighway or

other third-party groups to measure progress towards this goal?

32. As part of measuring progress towards the goal of ensuring eligible schools and libraries have affordable access to high-capacity broadband at speeds that will support digital learning, we seek comment on how to measure high-capacity broadband availability and affordability and the metrics that should be used.

33. For example, to measure availability, should we use the National Broadband Map to estimate what fraction of schools and libraries have access to at least one broadband provider within the same census block offering broadband at speeds that meet our proposed performance metrics? If so, what geographic vicinity should we use? Should we use census blocks as the measure? Should we supplement National Broadband Map data with other information? Instead, or in addition, should we collect data on the number of zero-bid service requests as a measure of service availability?

34. Similarly, to measure affordability, we could benchmark the post-discount prices paid by schools for broadband connections against some objective measure. We seek comment on this approach, and on what measures we could use. Would there be benefit to conducting an annual or biennial survey to measure school and library perceptions about affordability? If so, what questions should we ask? Alternatively, should we survey just those schools that do not adopt broadband connections meeting our performance targets to find out why they have not done so?

35. We also seek comment on whether the Commission should measure compliance with its "lowest corresponding price" rule as a measure of affordability to ensure that service providers are providing schools and libraries with the lowest corresponding price for E-rate supported services that a provider charges to a similarly situated non-residential customer. The rule mandates that service providers cannot charge schools, school districts, libraries, library consortia, or consortia including any of these entities a price above the lowest corresponding price for supported services, unless the Commission, with respect to interstate services, or the state commission with respect to intrastate services, finds that the lowest corresponding price is not compensatory.

36. *Educational Impact Measurements.* Is there a way to measure how success in the classroom is affected by access to E-rate funding or services supported by E-rate?

Stakeholders have, in the past, raised concerns with attempts to correlate E-rate funding with educational outcomes. Critics claim that because classroom performance is affected by many factors, there are no reliable conclusions to be drawn. However, proponents believe that assessing the contribution of digital learning and E-rate funded connectivity towards student outcomes may guide schools in determining the bandwidth and usage of broadband that are most effective as well as provide us guidance in ensuring that universal service dollars are efficiently spent. Is there a way to measure how success in the classroom is affected by access to E-rate funding or access to Internet access services? If so, what should such measures look like, and should they be tied specifically to E-rate funding or more generally to the deployment or use of broadband and next-generation infrastructure? A 2006 study by Austan Goolsbee and Jonathan Guryan found that E-rate support substantially increased the investment of some public schools in Internet and communications technologies, but did not find a statistically significant effect on student test scores. Have more recent studies suggested otherwise? We also seek comment on whether the Commission should adopt educational-outcome measurements. Is it appropriate for the Commission to do so, given that educational outcomes are outside the agency's core competence? Are there any legal or jurisdictional issues with doing so?

B. Maximizing the Cost-Effectiveness of E-Rate Funds

1. Proposed Goal

37. We propose to adopt, as the second goal of the E-rate program, to maximize the cost-effectiveness of E-rate funds. Ensuring that schools and libraries spend E-rate money in the most cost-effective ways possible maximizes the impact of limited E-rate funds and helps ensure that all eligible schools and libraries are able to receive all the support they need. Funds available through the E-rate program come from contributions made by consumers and businesses to the USF, and the Commission has a responsibility to ensure they are spent effectively.

38. This proposed goal is consistent with section 254(h)(2)(A) of the Communications Act, which requires that support to schools and libraries be "economically reasonable." As the Commission has previously observed, we have a "responsibility to be a prudent guardian of the public's

resources." We seek comment on this proposed goal.

2. Proposed Measurements

39. We seek comment on what performance measure or measures we should adopt to support the goal of maximizing the cost-effectiveness of purchases made using E-rate funds. Should we measure the value delivered to schools and libraries with support from the E-rate program by tracking the prices and speed of the broadband connections supported by the program? Should we measure an applicant's costs per-student and costs of products and services in comparison with other costs for products and services available in the marketplace? Are there additional data we would need to require from applicants to track relevant measures, or are there existing data repositories we could use for this purpose? Above, we seek comment on a number of possible affordability measures. Should we use any of these to measure cost-effectiveness instead of, or in addition to, affordability?

40. What data will best allow us to track these metrics? Should we encourage studies on the impact of E-rate support on prices paid for services? We currently report on the results of USAC's audits, and progress in reducing improper payments and waste, fraud and abuse. Should we use this information as part of this measurement?

C. Streamlining the Administration of the E-Rate Program

1. Proposed Goal

41. We propose to adopt, as the third goal of the E-rate program, to streamline the administration of the E-rate program. The number of applications the Administrator, USAC, receives from schools and libraries seeking E-rate support is daunting. For example, in funding year 2013, at the close of the application filing window, USAC received 46,189 applications seeking an estimated \$4.986 billion in support. In some cases applicants request more in funding commitments than they actually use, and there is no requirement or incentive for applicants to notify USAC in a timely fashion that they have received funding commitments that they will not use. Moreover, the application and disbursement processes are complicated, so that many schools and libraries now feel compelled to spend money on E-rate consultants just to navigate the E-rate processes. Thus, it is essential that we continue to improve the E-rate program procedures and

continue to simplify and streamline the program's application review and disbursement processes.

42. This goal therefore includes further streamlining and simplification of the application, review, commitment and disbursement processes, in order to make the most of E-rate funding and accelerate the delivery of support for high-capacity broadband at speeds that will support digital learning, while maintaining appropriate safeguards against waste and abuse. We seek comment on this proposed goal. We are mindful that the Commission and USAC have a duty to protect against waste, fraud and abuse in the program and that the procedures intended to protect against waste, fraud and abuse can complicate and slow down program administration. Therefore, we also seek comment on ways to reconcile the need to simplify the program with the need to protect against waste, fraud and abuse.

2. Proposed Measurements

43. We seek comment on what performance measure or measures we should adopt to support the proposed goal of streamlining the administration of the E-rate program. In 2007, the Commission adopted certain output measurements for evaluating the effectiveness of the E-rate program related to the application and invoicing processes and the resolution of appeals submitted to USAC. Specifically, the Commission required USAC to provide data, on a funding year basis by reporting the number of applications and funding request numbers (FRNs) submitted, rejected, and granted, and the processing time for applications and FRNs. The Commission also required USAC to document the amount of time it takes to make a billed entity applicant reimbursement payment to the service provider, and the number of paid and rejected invoices. Additionally, the Commission required USAC to determine the percentage of appeals resolved by USAC within 90 days from the date of appeal, and how long it takes to process 50 percent, 75 percent, and 100 percent of the pending appeals from the schools and libraries division.

44. What additional measurements should we adopt? The State E-rate Coordinators Alliance (SECA) previously suggested establishing deadlines for making priority one funding commitments and the payment of invoices. As noted above, the Commission currently requires USAC to report data measures for commitments, disbursements and appeals. Should specific targets be established for each of those categories? If so, how should

we establish those targets? Should we require USAC to improve on those targets each year or to maintain a certain level of performance?

45. Should we set goals for funding commitments by USAC to applicants as compared to actual disbursements by funding year? In addition, how should we ensure the administrative budget is appropriate for the program? Should we establish targets for the cost of administering the program compared to the program funds disbursed to recipients? Should we measure the number of students and patrons served with E-rate funding over a specified period of time? If so, what should we compare the results to? For example, should we compare it to other federal programs that administer the disbursement of subsidies, such as other USF programs, the Broadband Technology Opportunities Program (BTOP) or educational grant programs?

46. We also seek comment on whether we should adopt a proposal by SECA that USAC be required to retain an independent third party to perform an annual analysis of the barriers to schools and libraries participating in the E-rate program. If such an analysis is warranted, should it be performed annually, as proposed, or on some other time period, such as every three years?

47. We are also mindful of the cost to applicants associated with participating in this program and we seek ways to reduce and measure these costs. Should we collect data regarding administrative costs E-rate applicants incur throughout the application process? If so, what are the best methods to obtain that data? Should applicants be required to disclose on an FCC form the amount of time and cost spent preparing an application? Should we instead consider a survey or sample of participants to obtain this and other information relevant to determine the financial impact including, for example, the cost of hiring an E-rate consultant?

D. Data Collection

48. Finally, we seek comment on a number of cross-cutting issues regarding the collection of accurate, relevant and timely data to track our progress in meeting these goals. We seek comment on the benefits and burdens of requiring E-rate recipients and service providers to provide data to USAC in open, machine-readable formats in order to enhance the accessibility and usefulness of the data. We also seek general comment on what data we collect during the application and disbursement process that should make public. Are there any barriers to making public any data we collect that helps

measure our progress towards meeting our proposed goals? Will making such data public encourage the public to develop new and innovative methods to analyze E-rate data? If there are concerns about protecting the confidentiality of some of the data, are there ways to protect sensitive information while still making public the most relevant data or are there ways to aggregate the data to obviate confidentiality concerns? Finally, we seek comment on the extent to which we should apply the principles of the Office of Management and Budget's (OMB's) Open Data Policy to our efforts to collect and share E-rate data?

49. In addition to the specific revisions suggested above, should we revise any of the Commission's E-rate forms, such as the FCC Form 471 application, Item 21, or the FCC Form 500, to collect new data, or to change the formats in which we collect data? For example, should we revise the Item 21 attachment to the FCC Form 471 to collect data more consistently from all applicants? Are there ways we can change the format of the Item 21 to collect more granular data in a way that will allow us to more easily identify what products and services applicants are purchasing and at what prices? Commenters who advocate changes in data collection should indicate which form(s) and what specific revisions we would need to make on those forms in order to ensure that we receive useful information.

50. We also seek comment on essential definitions for purposes of measurement. When considering different policy outcomes, what are the key concepts that require a formal common definition upfront to enable more desirable measurements (e.g., "per school," "per-student," "per patron")? Unique persistent identifiers are important because they designate which entity is being dealt with and also are used to model relationships. Are there unique persistent identifiers for schools, school districts and libraries? For example, are locale codes used by the U.S. Department of Education's National Center for Education Statistics (NCES), also known as urban-centric locale codes, good identifiers to use for schools and school districts? To the extent existing identifiers are missing or have problems, would there be value in creating persistent identifiers or supplementing existing identifiers for some or all such entities, or for other types of applicants? What would be the requirements of such persistent identifiers?

51. Finally, are there goals and measures that we should adopt that we

have not already discussed?

Commenters should be as specific as possible about their proposed goals and measures.

III. Ensuring Schools and Libraries Have Affordable Access to 21st Century Broadband That Supports Digital Learning

52. In this section, we seek ways to further our proposed first goal for the E-rate program: ensuring schools and libraries have affordable access to high-capacity broadband services that support digital learning. We explore methods to focus E-rate funds on supporting high-capacity broadband to and within schools and libraries, to ensure equitable access to limited E-rate funds, and to lower new build costs and tap into other funding sources.

A. Focusing E-Rate Funds on Supporting Broadband to and Within Schools and Libraries

53. To support the goal of ensuring that schools and libraries have access to affordable high-capacity broadband, both to and within schools and libraries, we propose to update the E-rate program's funding priorities, and seek comment on how to do so. In particular, we seek comment on possible updates to the list of services eligible for E-rate support and the related rules to focus funding on those services that provide high-capacity broadband to school and library buildings and those services and equipment that disseminate the high-capacity broadband within those buildings, while deprioritizing or phasing out support for services associated with legacy technologies and services that have little direct educational application.

54. We recognize that E-rate has historically provided support for voice services, and voice services remain essential for communications and public safety at schools and libraries. However, we also recognize that voice services may increasingly be transitioning to a low-marginal-cost application delivered over broadband platforms. We seek comment on how to approach voice services within this framework.

1. Funding for Broadband Connections

55. *Technological architecture.* We begin by seeking general comment on the most efficient technological architectures that schools and libraries are likely to use for connectivity. Are fiber connections generally the most cost effective and future-proof way to deliver high-capacity broadband to community anchor institutions like schools and libraries? Are other

technologies, such as point-to-point microwave or coaxial cable, which are widely used to provide high-capacity broadband to schools and libraries today, also efficient and cost-effective ways to provide service as bandwidth demands increase?

56. Smaller schools and libraries may not need the bandwidth provided by fiber connectivity and, particularly for small rural and Tribal schools and libraries, fiber connectivity to the school or library may not currently be available in some areas, or requires the payment of very high up-front construction charges. For these schools and libraries, what are the most cost-effective ways to meet high-capacity broadband needs? Are there fixed wireless solutions that are cost-effective for such schools? Are there some schools where satellite connectivity is the only viable option?

57. How do schools generally purchase connectivity? As an all-inclusive service? Or do schools purchase long-term indefeasible rights of use (IRUs) in physical infrastructure separately from managed services? What approaches are most efficient?

58. Fiber deployment. In the *Schools and Libraries Sixth Report and Order*, subject to certain limitations, the Commission added dark fiber to the list of services eligible for E-rate support. We seek comment on how schools and libraries have incorporated dark fiber into their broadband deployment plans as the result of this change.

59. To further improve applicants' flexibility in finding cost effective ways to deploy high-capacity broadband, we propose to make our treatment of lit and dark fiber more consistent. The E-rate program currently supports the recurring costs of leasing lit and dark fiber as priority one services. When a school or library leases lit fiber, the modulating electronics necessary to light that fiber are included in the recurring supported cost of the service and are therefore funded as part of the priority one service. By contrast, a school or library that leases dark fiber will not receive priority one support for the modulating electronics necessary to light the dark fiber. To eliminate this disparity, we propose to provide priority one support for the modulating electronics necessary to light leased dark fiber.

60. Installation charges for lit and dark fiber are also treated somewhat differently under current rules. Currently, the E-rate program provides priority one support for the installation of lit or dark fiber up to the property line of eligible schools and libraries. It also supports all "special construction charges" for leased lit fiber, but does not

support "special construction charges" for leased dark fiber beyond an entity's property line. Special construction charges include design and engineering costs, project management costs, digging trenches and laying fiber. In order to maximize the options available for schools and libraries seeking to deploy fiber to their premises, we propose to provide priority one support for special construction charges for leased dark fiber, as we do for leased lit fiber.

61. Additionally, although the E-rate program currently provides support for some installation and special construction charges, it requires the cost of large projects to be spread over three years or more. The Commission's intent in requiring the cost to be spread over multiple years was to reduce the demand on the fund, but it may have the unintended consequence of deterring efficient investments, including the deployment of fiber. Should we continue to require that large installation and construction costs be spread over multiple years? If so, what should the threshold be for requiring that costs be spread over multiple years? Is three years the right period? Does the answer depend on how many sites are being connected?

62. We seek comment on the cost to deploy fiber or other technologies that would provide high-capacity broadband connectivity to schools. We also seek comment on other aspects of support for installation and construction charges. Is there a limit to the amount of funding we should provide to any one library, school or school district over a certain amount of time for construction and installation costs? Are there specific costs that we should or should not fund as part of installation and construction? Are there other approaches we should consider in dealing with high installation and construction costs? We seek comment on whether fiber deployment to schools and libraries being slowed because applicants cannot afford to pay the non-discounted portion of deployment costs. Are there any other conditions we should impose on applicants who seek prioritized support for lit or dark fiber and modulating electronics? Are there ways to cost effectively deploy fiber and minimize recurring costs to schools and libraries?

63. We also seek comment on whether prioritizing special construction charges to deploy fiber or other technologies from middle mile networks to schools and libraries (lateral fiber builds) by dedicating a specific amount of E-rate funding to support such deployment would help meet our connectivity goals. Would some prioritization to support

lateral fiber builds create long term cost efficiencies for schools and libraries and for the E-rate program? If so, what should that amount be? Should we encourage or require schools and libraries to enter into long-term IRUs or other long-term arrangements on such lateral builds to get the maximum value of initial investments in fiber? How should we determine the rules of priority for such funding and how much funding should be allocated to each applicant? For example, should funding for fiber builds be distributed based on the poverty level of the students at a school, rurality, location on Tribal lands, lack of fiber or other high-capacity broadband connections to community anchor institutions, or some other objective, observable metric? How much support do we need to provide to make it possible for schools and libraries to apply for such funds, particularly in rural, tribal and other areas where deployment is likely to be expensive? Should we also consider allowing applicants to amortize the costs over a period of time longer than the three years currently required?

64. Is there a role for the states or Tribal governments to play in determining priority for such funds? For example, should we seek state and Tribal government recommendations for the neediest communities (e.g., low income or schools or libraries without broadband), allowing the Commission to make the final determinations based on the amount of funding set aside for particular schools and libraries for fiber lateral builds? We specifically seek comment on any other factors to determine priority of funding for fiber lateral builds. We also seek comment on any potential requirements for receipt of specific support for fiber lateral builds. Should we, for example, require community access to high-capacity broadband facilities in exchange for such funding? We ask commenters to be as specific as possible in response to these questions.

65. If we prioritize some funding for new high-capacity broadband deployment should we be technology neutral or should we prioritize fiber connectivity over other types of broadband connectivity? Should we give schools flexibility to select the best technology that meets their needs? As discussed above there may be some schools and libraries, particularly small rural schools and libraries, where fiber deployment is either not necessary or simply cost-prohibitive. How should we address the needs of schools and libraries in areas where fiber is far less likely to be offered or available, such as Tribal lands? Are there other solutions

such as fixed wireless or cable solutions that would be sufficient today or in the future for meeting such schools' and libraries' high-capacity broadband needs? Are there deployment costs associated with any of those technologies that should be supported by the E-rate program?

66. If we seek to spur fiber or other broadband deployments through dedicated funding, are there associated changes we should make in how we fund the recurring costs for telecommunications and Internet access services, which are also priority one services today? For example, should we fund broadband deployment upgrades before recurring costs, creating a further prioritization within existing priority one services? Should we consider providing a different discount rate for ongoing services than for initial fiber upgrades? Would this approach encourage schools and libraries to enter more efficient long-term service arrangements as part of new infrastructure investments?

67. *Wide Area Networks (WANs)*. Many schools and libraries use WANs to provide broadband connectivity to and among their buildings. WANs are useful for participants in the E-rate program, particularly school districts and consortia, because they provide dedicated connections between the schools within a school district or the schools and libraries within a consortium allowing them to easily share information and resources. For example, last August, Red Lion School District in Pennsylvania finished deploying a fiber-based WAN network that was supported by the E-rate program. Prior to deploying the new WAN, the district, which has nine schools, had an assortment of technologies but no school had bandwidth greater than 50 Mbps. The new WAN, which incorporates both microwave and fiber technology, provides many of the schools with 1 Gbps in bandwidth to support distance learning, social media, Web 2.0, and cloud-based services. Under the current E-rate rules, however, applicants are allowed to seek support for leased access to WANs but are not permitted to seek support for WANs that they build or purchase.

68. We seek comment on whether there are circumstances under which it will be more cost-effective for schools and libraries to build or purchase their own WAN rather than to lease a WAN. We also seek comment on whether there might be occasions where building or purchasing their own WAN is the only way for schools and libraries to get broadband access. If so, we seek

comment on whether we should lift our prohibition on schools and libraries building or purchasing their own WANs by removing § 54.518 of our rules, or amend that section of our rules to allow schools and libraries to build or purchase their own WANs under certain circumstances. If the latter, we seek comment on the criteria we should use in determining whether to provide E-rate support to schools and libraries that purchase or build their own WANs.

69. In the *Healthcare Connect Fund Order*, 78 FR 13935, March 1, 2013, the Commission allowed consortia to seek rural health care fund support to build and own their own network facilities if construction was determined to be the most cost-effective option after competitive bidding. However, the *Healthcare Connect Fund Order* also imposed several safeguards on the program to ensure that consortia only exercised their option to self-construct when it was absolutely necessary. Should we impose similar safeguards on schools and libraries' option to self-construct WANs in the E-rate program? Are there other E-rate supported services that we should allow applicants to self-provision? If so, what services and under what conditions?

70. More generally, are there any other rule changes needed to ensure schools and libraries can access high-capacity connections to their premises? What other steps can we take to spur efficient new broadband deployments, particularly those deployments, like new fiber builds, that will dramatically increase speeds while bringing down long-term per Mbps prices?

71. Broadband connectivity within schools and libraries. We also seek comment on options to support connectivity within schools and libraries. In recent years, the E-rate program has been unable to fund billions of dollars in requests from applicants seeking support for internal connections. For example, in funding year 2012, USAC received approximately \$2.47 billion in funding requests for internal connections, and was unable to fund any requests below the 88 percent discount rate. As a result, many E-rate recipients have not received support for internal connections, and must provide full funding for needed internal connections or go without. We seek comment on the percent of schools and libraries that do not have the necessary equipment to provide high-capacity broadband connectivity within schools, and the amount it would cost to provide high-capacity broadband connectivity within such schools and libraries. We invite commenters to be as specific as possible

and to provide any data they have available on this issue.

72. More broadly, we request that commenters provide data on the nature of internal networks generally deployed within schools and libraries today and the likely needs of schools and libraries going forward. Previously in this section, we asked for information about the most efficient and cost effective network architectures for deployment of high-capacity broadband. Similarly, we ask for detailed information about internal network configurations. Will school networks generally consist of wired connections between classrooms and high-capacity wireless routers in each classroom? Do schools generally have internal high-capacity wired connections to each classroom today? If so, should we focus funding on newer high-capacity wireless routers, which are needed to allow multiple simultaneous high-capacity connections in a classroom environment?

73. Are there other equipment or services necessary for high-capacity broadband connections that should qualify for prioritized support? For example, which of the internal connection services listed as priority two services on the current ESL are necessary for providing high-capacity broadband connectivity within schools or libraries? What services not on the ESL should we consider supporting? Should we, for example, consider providing support for caching services or for services necessary for providing network security for schools and libraries? Is there evidence that outdated networking equipment (firewalls, content filters, etc.) creates significant speed bottlenecks on school and library networks? Is adding these types of services to the list of supported services, so that schools and libraries have the funding necessary to update those services, needed to eliminate significant speed bottlenecks? Are there any services not currently receiving support that would allow more cost effective use of E-rate funds?

74. In 2001, the Commission prohibited E-rate recipients from obtaining discounts under the universal service support mechanism for the purchase or acquisition of technology protection measures necessary for the Children's Internet Protection Act (CIPA) compliance. At the time of the 2001 CIPA Order, 66 FR 8374, January 31, 2001, protection delivered at the network level was in its nascent stages and now schools and libraries need to employ network-level protection more ubiquitously. Should the 2001 decision to prohibit schools and libraries from receiving E-rate discounts for

technology protection measures apply to the broad spectrum of services schools and libraries employ for network security which may include, or go beyond those protections necessary for CIPA compliance, in order to maintain and protect high-capacity broadband networks? We seek comment on whether we should review the 2001 CIPA Order decision in light of the network security needs of schools and libraries today.

75. Are there any other rule changes needed to ensure schools and libraries can effectively use high-capacity connections to their premises? What other steps can we take to spur efficient new high-capacity broadband deployment within schools and libraries.

76. *Recurring costs.* We also seek comment on the recurring costs of high-capacity broadband services. As schools and libraries have been increasingly purchasing high-bandwidth connections, how have their recurring monthly costs changed? We anticipate that in order to meet our proposed connectivity goals, the average recurring per-megabit prices of connectivity purchased by schools will need to come down substantially. Fortunately, there is precedent for significant price reductions associated with infrastructure upgrades. For example, the Commission's Rural Health Care Pilot Program showed that bulk buying through consortia coupled with competitive bidding can reduce the prices that recipients pay for services and infrastructure.

77. How can we ensure that recurring costs come down sufficiently over time within the E-rate program to make our proposed connectivity goals achievable and sustainable? Are the program's existing matching and competitive bidding requirements sufficient safeguards, or are further steps required? For example, should we phase in maximum per-megabit prices over time that are eligible for E-rate discounts, or set program-wide per-megabit price guidelines or targets? Would such prices give schools and libraries greater leverage in soliciting bids from vendors, or simply limit the choices available to schools and libraries? What should such prices be? If we set maximum per-megabit prices, should we allow exceptions in certain circumstances? What impact would such price guidelines or targets have on schools or libraries in areas that lack competition for high-capacity broadband, such as Tribal lands? How would such prices account for differences between more and less heavily-managed services? We seek comment on other options. Below,

we also seek comment on how to maximize cost-efficient purchasing. Will these approaches ensure cost-effective purchasing of recurring services?

2. Phasing Down Support for Certain Services

78. Above we seek comment on modifying our rules to ensure availability of the key products and services needed for high-capacity broadband connectivity to and within schools and libraries. We now seek comment on two approaches for streamlining the remainder of the ESL to focus support on high-capacity broadband. First, we propose to phase out support for a number of specific services, including outdated services currently on the ESL, for components of voice service, and seek comment on phasing out support for services that are not used primarily for educational purposes. Second, we seek comment on more fundamentally shifting the way we direct E-rate support to focus exclusively on high-capacity broadband connectivity to and within schools. In so doing, we seek comment on whether there are additional services for which we should phase out or reduce support, including traditional telephone services. Finally, we seek comment on a number of issues that will need to be addressed whichever approach we take.

79. We recognize that flash-cuts to support in a funding year could be financially difficult for schools and libraries and therefore, throughout this section, we seek comment on phasing out support for services we remove from the ESL, rather than eliminating them immediately. We also seek comment on other changes we could make, such as assigning such services a different discount rate that would require applicants to pay for a greater share of those services than for services that we consider to be directly connected to the fundamental purpose of the E-rate program. We also seek comment on how to address bundling of supported services, including bundles that include services for which we phase out support.

a. Specific Services for Which Support May No Longer Be Appropriate

80. *Outdated services.* We first propose to phase out funding for those services that are outdated. For example, paging services are eligible for support because in 1998, the first year of E-rate funding, the adoption of mobile phones was not yet widespread and pagers filled the role of common personal and mobile communications. Paging services have grown increasingly obsolete with the advent and explosive growth of

mobile technology and services, many of which are also supported by the E-rate program. Yet, paging services continue to be eligible for E-rate support, and in funding year 2011, USAC committed approximately \$934,000 for paging services for more than 500 E-rate requests.

81. Likewise, directory assistance services are eligible for support because, in 1997, directory assistance was considered a core service. Now, however, Internet search has largely replaced directory services. We, therefore, seek comment on our proposal to phase out E-rate support for paging services and directory assistance.

82. Do either paging services or directory assistance service serve any important educational purposes? Is it in the public interest to continue to provide support for either paging services or directory assistance? Are there any other services that are similarly outdated and should no longer be eligible for E-rate support? For example, is there any reason to continue to provide support for dial-up services? In funding year 2011, there were more than 100 requests for approximately \$95,000 in funding commitments for dial-up services. Is that still necessary today? Are there any schools or libraries that have no other option for accessing the Internet besides dial up services?

83. *Components of voice service and supplemental services.* We also propose to phase out funding for services that are simply components of voice service as well as those services, other than voice, that ride over or are supplemental to high-capacity broadband connections but are not necessary to make a broadband service functional. More specifically, we first propose to eliminate support for custom calling features, inside wiring maintenance plans, call blocking, 800 number services, and text messaging as components of voice services that may not serve educational purposes and do not further our proposed goals. USAC has estimated that it committed more than \$85,000 for 800 number service in funding year 2011 and more than \$75,000 for unbundled text messaging in funding year 2011. We seek comment on this proposal and we ask whether there are other such services for which we should no longer provide E-rate support?

84. We also seek comment on phasing out funding for supplemental or "ride-over" services. In the *Healthcare Connect Fund Order*, the Commission determined it would only provide support for services necessary to make a high-capacity broadband service functional as distinguished from

services or applications that ride over the network. The Commission explained that it was connectivity that served as the “input” to making the ride-over services functional and not the other way around. Although the proposed goals for the E-rate program are somewhat different from our Healthcare Connect Fund goals, should we use the *Healthcare Connect Fund Order’s* concept of “ride over” services to help determine what currently supported E-rate services should be considered supplemental to broadband, and therefore no longer supported? We seek comment on whether the *Healthcare Connect Fund Order’s* characterization of ride-over services is instructive for E-rate purposes.

85. Based on the concept articulated in the *Healthcare Connect Fund Order*, we seek comment on phasing out E-rate support for services that are not directly related to connectivity and seek comment on this proposal, such as electronic mail services (email) service and web hosting as supplemental services. In previous proceedings, commenters have claimed that the pricing of web hosting in the K–12 market has become skewed when compared to other commercially available web hosting services and claim that vendors have become adept at packaging their services to increase the cost of web hosting above market rates in order to decrease the cost of the ineligible services. USAC estimates that it committed \$9.8 million for email services and almost \$28 million for web hosting in funding year 2011. Should the E-rate fund be supporting services such as web hosting and email at costly monthly rates when many such services are cloud based and offered basically for free to other users? Is there any continuing and compelling policy reason to continue to fund such services?

86. We note that “electronic mail services” are included within the definition of “Internet access” in § 54.5 of our rules and we therefore seek comment on whether we would need to change the definition of “Internet access” for purposes of the E-rate program if we were to stop providing support for email services. If so, should we simply delete the reference to electronic mail services in the definition of Internet access in § 54.5 of our rules? Are there are other changes we need to make to our rules if we phase down or eliminate support for the types of services discussed above? Are other services that are currently eligible for E-rate support that ride over or are supplemental to high-capacity broadband connections, but are not

necessary to make a high-capacity broadband service functional?

87. *Educational purposes.* In the *Schools and Libraries Second Report and Order*, 68 FR 36931, June 20, 2003, the Commission determined that activities that are integral, immediate, and proximate to the education of students, or in the case of libraries, integral, immediate, and proximate to the provision of library services to library patrons, qualify as “educational purposes.” The *Schools and Libraries Second Report and Order* also, however, provided a presumption that services provided on-campus serve an educational purpose. More recently, the Commission clarified educational purposes in *Schools and Libraries Sixth Report and Order* by requiring that schools must primarily use services funded under the E-rate program, in the first instance, for educational purposes.

88. We seek comment on whether we should make changes to the E-rate program to ensure that supported services are, at a minimum, used for the core purpose of educating students and serving library patrons. More specifically, we seek comment on whether we should allow a school or library to seek E-rate support for services that will be used only by school and library staff, administrators, or board members. If school and library staff use the supported services in their role as educators and information providers but the services are inaccessible to students and library patrons, does this satisfy the statutory requirement that the support be used for educational purposes in 47 U.S.C. 254(h)(1)(B) and that advanced telecommunications be enhanced for all classrooms and libraries in 47 U.S.C. 254(h)(2)(A)? Should E-rate funds be provided if school and library staff use such services only for administrative or other purposes not directly tied to education? If funds are provided for administrative or other purposes not directly tied to education, should they have a lower priority than funds provided for the core purpose of serving students and library patrons?

Alternatively or additionally, should we stop providing E-rate support for services to non-instructional buildings, such as bus garages? If so, how should we treat non-instructional buildings, such as technology centers, that support E-rate supported services? Are there some administrative functions such as parent-teacher communication that should always be considered as primarily serving an educational purpose? Or, even if there are services that further the educational mission of the school, is it now no longer realistic

to support all of these services within our budget since funding is always limited? We invite commenters to distinguish between and among E-rate supported services when responding to these questions. For example, do commenters think we should take a different approach when it comes to Internet access services as opposed to basic voice services? What changes to the E-rate program would be necessary, such as changes to our rules or required program certifications, if we were to limit E-rate funding to services directly available, at least in part, to students and patrons? Would placing limits on funding for services that are not directly available to students or patrons be too difficult to monitor or audit or raise cost-allocation challenges? Commenters should be specific in their proposals.

89. *Basic maintenance of internal connections (BMIC).* We seek comment on phasing out funding for BMIC. For funding year 2011, USAC committed nearly \$125 million for BMIC. We previously sought comment on modifying our approach to funding for BMIC, and now seek to refresh the record. We recognize that maintenance in some form is necessary for broadband and other supported services to remain available to schools and libraries. However, under our current rules which fund BMIC as a priority two service, the same high-discount school districts receive more than ample funding for basic maintenance each year, while other needy schools and school districts have received no priority two support for increasingly important and necessary internal connections. Additionally, it is especially difficult for USAC to monitor compliance with rules regarding BMIC, and BMIC may therefore be more susceptible to abuse than other funded services. We therefore seek comment on whether to amend § 54.502 of our rules by deleting subsection (a)(2) and removing all other references to basic maintenance services. We also seek comment on whether there are other provisions of our rules that need to be amended if we phase out support for BMIC.

90. *Cellular data plans and air cards.* We also seek comment on how to treat support for Internet access services provided via cellular data plans, including air cards. Such services are costly, and can be provided more efficiently on-campus via an E-rate supported local area (LAN) network that connects to the Internet. Should we phase out support for cellular data plans and air cards or should we instead deprioritize support for such services?

b. Tightly Focusing the Eligible Service List

91. In addition to the specific services identified above, we seek comment on whether we should more fundamentally shift the way we prioritize E-rate support to emphasize and accelerate high-capacity broadband connectivity to and within schools and libraries. In particular, we seek comment on whether we should seek to identify the services currently on the ESL—plus any additional services—that are essential for high-capacity broadband connectivity, and limit the ESL to just those services. What services, in addition to those identified above, should we remove from eligibility under this approach? Would taking this approach help ensure that schools and libraries have the bandwidth necessary to support digital learning?

92. SECA's recent proposal to streamline priority two services is one example of such an approach. SECA recommends that the priority two ESL be "redefined to focus on ensuring that the transmission of bandwidth inside the building is sufficient, and all other functionality should no longer be eligible for support." It therefore suggests that priority two eligible services should be limited to routers, up to one per building; wireless access points, up to one per classroom for schools; and internal cabling, up to three cabling drops per classroom for schools. We seek comment on SECA's proposal, as well as on variations and alternatives.

c. Transitioning Voice Support to Broadband

93. We also seek comment on phasing out services that are used only for voice communications. At the inception of the E-rate program, one of the primary ways to access the Internet was through voice telephone lines that delivered dial-up service via a 56 kbps modem. Today, widespread deployment of faster-speed technology has permitted schools and libraries to have access to high-capacity broadband connections that permit many types of digital learning technologies. We ask whether focusing on the transport of broadband and transitioning away from voice services would better serve the proposed priorities of the program.

94. In funding year 2011, there were more than 37,000 requests for local and long distance telephone service, amounting to approximately \$260 million in funding commitments. While, for funding year 2011, USAC estimates that it committed close to an additional \$176 million for cellular services. We

seek comments on whether this funding would have greater impact for students and library patrons if it were transitioned to support broadband for schools and libraries.

95. SECA's June 2013 White Paper recommends that telecommunications services that are used only for voice communications should be phased out of E-rate support because such services are not used to provide advanced telecommunications or information services to schools or libraries. It suggests, however, that telecommunications services used for both data and voice telecommunications services should continue to be fully eligible for E-rate without requiring any cost allocation. SECA specifically proposes a tiered phase out of funding for all basic phone service over a five-year period to allow the smaller and more rural applicants who disproportionately use the basic phone service and legacy technologies ample opportunity to upgrade their infrastructure, and for their associated service providers to also update their service offerings. We seek comment on SECA's plan for phasing out E-rate support for basic voice telecommunications. Would the savings resulting from the phase out of funding for basic voice be better spent on high-capacity broadband that supports digital learning? Would the phase out of voice services give more E-rate applicants the opportunity to have internal connections project funded under the program?

96. We ask about the potential hardship schools and libraries would face if voice phone service was phased out under the E-rate program. As we noted in the *E-rate Broadband NPRM*, 75 FR 32699, June 9, 2010, we recognize that local, state and Tribal jurisdictions around the country are facing economic difficulties and budget tightening. At the same time, we seek comment on the extent to which E-rate support for voice service serves to provide schools and libraries access to services they would not otherwise be able to afford, or simply subsidizes voice telephone service that schools and libraries would purchase anyway, including voice services schools across the country may have been paying for in full before the inception of the E-rate program.

97. Should the Commission consider subsidizing more cost-effective ways to make local and long-distance calls? Does Voice over Internet Protocol (VoIP) service provide a viable alternative to public-switch telephone service? Has the advent of increased broadband speeds in schools and libraries made VoIP service a more cost-efficient and

attractive way to receive voice services? How should our rules accommodate the needs of schools and libraries in areas without VoIP services, including some Tribal lands? Or should the Commission also phase out funding for all voice services, including VoIP service?

98. We seek comment on whether there are any statutory limitations that must be considered in eliminating voice telephone service from the ESL. To the extent there are legal concerns with removal of voice telephony service from the ESL, could we condition support for voice telephony service in a way that would eliminate stand-alone support for voice telephony service but allow it for bundles that include broadband service? Could the Commission forbear from applying the obligation on telecommunications carriers to discount their voice telephony service, thus eliminating the need for such reimbursement?

d. General Issues Related to Phasing out Support

99. In the paragraphs above, we have proposed or sought comment on proposing phasing out funding for several types of services. If we decide to phase out support for these services, should we begin immediately for funding year 2014? Or should we instead phase down such support over a longer period of time to provide more time for applicants? If so, what period of time would be appropriate? Are there some services we should stop supporting immediately, and others we should phase out incrementally over time?

100. Alternatively, should we consider maintaining support for some or all of these services, but at a lower priority than the funding of high-capacity broadband services? Or, as another alternative to phasing out funding for the services described above, should we consider reducing the percentage of support we provide for those services? If so, what percentage of support would be appropriate?

101. Are there other services for which we should phase out support or reduce the percentage of support E-rate provides? We ask commenters to identify any specific services that they think should be supported by the E-rate program, but at a lower discount rate, and what discount rate commenters think we should use. Should the discount be flat for all services, regardless of the applicant or should we adjust all applicant discount rates for such services? Finally, we invite commenters to help us refine USAC's estimates of the amount of E-rate funding spent on each of the services at

issue in this section and elsewhere in this NPRM. Should we consider other changes to the ESL?

102. We seek comment on any other approaches we should consider. For example, because access to high-capacity broadband is far below the national average on Tribal lands, should we consider adopting an E-rate Tribal priority? If so, how should such Tribal priority operate? Should, for example, a Tribal priority be available to schools operated by the Bureau of Indian Education or by individual Tribal governments? Commenters should be as specific as possible.

B. Ensuring Equitable Access to Limited E-Rate Funds

103. To help address high demand for E-rate funding and to ensure equitable access to limited E-rate funds, we seek comment on revisions to the way E-rate funding is currently distributed. As explained in more detail above, under current program rules, eligible applicants must contribute between 10 and 80 percent of the cost of the supported service. The discount available to a particular school is determined by the percentage of student enrollment that is eligible for a free or reduced price lunch under the NSLP or a federally-approved alternative mechanism, such as a survey. A library's discount percentage is based on the discount rate of the public school district in which the library is physically located. Schools and libraries located in rural areas also may receive an additional 5 to 10 percent discount compared to urban areas. The rules provide a matrix, produced above in Figure 1, reflecting both a school's urban or rural status and the percentage of its students eligible for the school lunch program to establish a school's discount rate, ranging from 20 percent to 90 percent, to be applied to eligible services.

104. Below we seek comment on six options for revising the structure for distributing funds under the E-rate program by: (1) revising the discount matrix to increase certain applicants' matching requirements; (2) providing support on a district-wide basis; (3) revising our approach to supporting rural schools and libraries; (4) incorporating a per-student or per-building cap on funding into the discount matrix; (5) providing more equitable access to priority two funding; and (6) allocating funds to all eligible schools and libraries up front. These options are not necessarily exclusive of one another and we encourage interested parties to address comprehensively the various proposals,

particularly if aspects of one are in tension with another. We also ask that parties consider the impact of changes to the discount matrix on libraries, and we seek comment on what particular challenges libraries will face if we change the discount matrix.

1. Modifying the Discount Matrix

105. To have sufficient funds to meet applicants' needs for high-capacity broadband and equitably distribute funding across schools and libraries, we seek comment on whether we should gradually increase, over time, the minimum percentage of matching funds that E-rate applicants must provide when seeking support from the E-rate program. We seek comment on whether this would better serve—on a cost benefit basis—our statutory mandate to “ensure affordable access to and use of” E-rate services. We also seek comment on other possible changes to the discount matrix.

106. *Increasing applicants' matching requirement.* Gradually increasing the minimum matching funds provided by applicants would broaden the availability of E-rate support. In funding year 2011, for example, USAC committed approximately \$818 million in support for applicants at the 90 percent discount level, and \$790 million in support for applicants at 80–89 percent discount levels. Thus, nearly two thirds of all funding went to applicants at these funding levels. Some previous commenters have suggested reducing the maximum discount rate to 80 or even 70 percent. If the maximum discount rate had been 80 percent in funding year 2011, there would have been approximately \$150 million in funding to spread more widely to applicants who did not receive support for priority two services.

107. Increasing the matching requirement could also encourage applicants to make more efficient and smarter decisions. In 2003, a USAC task force on the prevention of waste, fraud and abuse found that increasing the percentage of costs that schools and libraries pay for E-rate supported services would encourage more careful and cost-efficient purchasing of E-rate supported services and would thereby reduce the risk of waste, fraud and abuse of E-rate funds. Therefore, it recommended requiring applicants to pay at least 20 percent of the price of priority two E-rate services. We seek comment on that analysis.

108. More recently, Funds for Learning, an E-rate consultant, issued a report demonstrating that school districts with high discount rates spend, on average, far more on E-rate supported

services than schools that have to pay a higher percentage of the costs of the supported services they purchase. We seek comment on that analysis and whether it supports a decision to reduce the maximum discount level. Funds for Learning also notes, however, that the majority of high-discount schools are not, in its words, “big spenders.”

109. Recent changes to the Rural Health Care program provide an example of the potential benefits of reducing the maximum discount level. In adopting the *Healthcare Connect Fund Order* last year, the Commission required fund recipients to contribute 35 percent of the costs of the supported services. The Commission found that requiring recipients of Healthcare Connect funds to contribute 35 percent of the costs of services gave health care providers a strong incentive to control the total costs of the supported services and “appropriately balances the objectives of enhancing access to advanced telecommunications and information services with ensuring fiscal responsibility and maximizing the efficiency of the program.”

110. We anticipate several advantages to increasing the matching requirement even if we do so over time. For example, requiring the schools and libraries with the highest discount rate to pay for a greater share of their purchases could help drive down the purchase price for E-rate supported services. Applicants receiving substantial (80–90 percent) discounts have greatly reduced incentives to ensure they are receiving the lowest priced services or that they are getting only services they need. We also seek comment on the other benefits, as well as the drawbacks, to increasing schools' and libraries' minimum matching requirement for E-rate supported services.

111. For any revisions we may ultimately make to the discount an applicant can receive for E-rate supported services, we propose to phase in such changes over some period of time, such as three years. Is this enough of a phase-in to allow applicants to adjust their requests? Does the length of the necessary phase-in depend on the extent of reduction in the maximum discount level? We seek comment on such a phase-in for each of the different suggested revisions noted above.

112. *Other modifications to the discount matrix.* We also seek comment on other potential adjustments to the discount matrix to ensure that we can provide some funding to all eligible schools and libraries for all supported services. Should we, for example, reduce the lowest discount rate from 20 percent to 10 percent? How would that

change affect the ability of schools and libraries with the lowest number of students qualifying for free and reduced lunch to receive affordable high-capacity broadband? Should we reduce the top discount to 85 percent, 75 percent, or 65 percent? If so, should there be a reasonable transition period? Should we consider reducing each discount level by a set percentage, such as five percent or ten percent? We estimate that if all the discount rates were five percent lower in 2011, USAC would have been able to distribute an additional \$169 million in priority two funding. We estimate that if all discount rates were ten percent lower, in 2011 USAC would have been able to distribute an additional \$338.5 million in priority two funding. Would reducing the discount rate across the board result in a disparate impact on applicants depending on the discount level? What would the impact be if we reduced the number of discount levels? Would such a decision simplify the discount calculation process for applicants? Should we consider combining applicants at similar discount levels into a single discount level? Should we require all applicants eligible for a discount between 75 percent and 85 percent, for example, to apply using only an 80 percent discount? Should we have a flat rate discount, or one flat rate discount for rural schools and libraries and one for all other schools and libraries? Are there other ways to adjust the discounts applicants are eligible for? In order to encourage consortium purchasing, should we have a higher minimum discount rate for consortia applications than for individual school and school district applications?

113. There are other possible ways to modify the matching funds requirement, and we invite commenters to offer other proposals. We also invite commenters to refresh the record on previous proposals. For example, in response to the *E-rate Broadband NPRM*, SECA proposed simplifying the discount matrix by setting applicants' discount rate at the sum of the applicant's NSLP discount percentage plus 20 percent for non-urban areas, and 25 percent for rural areas, up to a maximum discount rate. We invite comments on that proposal, and specifically seek comment on how such a change would affect applicants and the fund. What should the maximum discount rate be? Are there other ways that SECA's proposal should be adjusted?

2. Support Based on District-Wide Eligibility and Application by School District

114. We seek comment on requiring all schools within a school district to submit applications by school district, rather than by individual school or groups of schools within the same district, and to use the average discount rate for the entire school district rather than the weighted average for each school building. We also seek comment on whether all libraries located within a school district should use the school district's discount rate when calculating their discount rate.

115. Currently, school districts, library systems, or other billed entities are required to calculate discounts for services that are shared by two or more of their schools, libraries, or consortia members by calculating an average discount based on the discounts of all member schools and libraries. School districts, library systems, or other billed entities are required to ensure that, for each year in which an eligible school or library is included in an application for purposes of calculating the aggregate discount rate, that eligible school or library receives a proportionate share of the shared services for which support is sought. For schools, the average discount is the weighted average of the applicable discount of all schools sharing a portion of the shared services, with the weighting based on the number of students in each school. For libraries, the average discount is a simple average of the applicable discounts to which the libraries sharing a portion of the shared services are entitled. Each billed entity—the entity responsible for making payments directly to a service provider—must file a separate FCC Form 471 application to certify their eligibility to receive discounts on eligible services for eligible schools, libraries, and consortia of those entities.

116. In the *E-rate Broadband NPRM*, the Commission sought comment on a proposal to revise the discount rules so that schools would calculate discounts on supported services by using the average discount rate for the entire school district rather than the weighted average for each school building. As the Commission observed in the *E-rate Broadband NPRM*, calculating discounts by individual school adds a significant level of complexity to the application process, because the discounts must be calculated separately by school and checked individually by USAC. Simplifying the discount percentage rate calculation across a school district could streamline the application process for school districts and reduce the

administrative burden on USAC by no longer requiring USAC to verify each individual school's discount percentage rate. We also anticipate that applying one discount rate to all eligible schools in a school district could lead to more timely funding commitments from USAC. Additionally, the Commission stated that it could significantly reduce the amount of information necessary for Block 4 of the FCC Form 471 application and eliminate a billed entity's submission of multiple FCC Form 471 applications at different discount levels. Moreover, SECA argues that calculating discounts on a district-wide basis better reflects schools' financial realities: tax bases are calculated on an entire district population, not just those of a subset of schools, and budgets are set district-wide. Allowing libraries located within a school district to use the school district's discount rate would also ease the administrative burden of such libraries.

117. Accordingly, we propose to revise § 54.505(b) of the E-rate rules to read:

School districts shall calculate discounts on supported services described in § 54.502(b) by calculating a single discount percentage rate for the entire school district by dividing the total number of students eligible for the National School Lunch Program within the school district by the total number of students within the school district. This single discount percentage rate shall then be applied to the discount matrix to set a discount rate for the supported services purchased by all schools within the school district.

We seek comment on this proposed rule. We also seek comment on whether we should define "school district" for purposes of this proposal.

118. We also propose below to change our definition of "rural" for purposes of the E-rate program to ensure greater funding to truly rural areas by using the U.S. Department of Education's NCES definitions. Currently, the definition of "rural area" is the same used by the U.S. Department of Health and Human Service's Office of Rural Health Care Policy (ORHP). Are there any school districts for which some schools would be differently classified as "rural" or not under our current or proposed definition? If so, we seek comment on whether to apply the rural discount if any schools in a district are considered to be located in a "rural" area or if a majority of the schools in a district are considered rural. Alternatively, should we consider partial rural discounts depending on the proportion of schools

that are rural, or other approaches? We recognize that there may be specific instances where adopting a district-wide discount rate may result in a lower discount for certain entities. We therefore seek comment on the impact of this proposal on schools and libraries.

119. Additionally, in the *E-rate Broadband NPRM*, as part of its efforts to streamline the application process, the Commission sought comment on a proposal to require all schools and libraries that are part of the same school district to submit applications for priority two internal connections by school district, rather than by individual school. As the Commission stated in the *E-rate Broadband NPRM*, requiring schools to apply by school district would help streamline the process and simplify the discount calculation for schools as well as the review process for both applicants and USAC. Additionally, it would ensure that libraries receive funding for internal connections and at the same discount level as schools located within their school district. We thus seek comment on amending § 54.504(a) of the E-rate rules to read:

An eligible school, library, or consortium that includes an eligible school or library seeking to receive discounts for eligible services under this subpart, shall, upon signing a contract for eligible services, submit a completed FCC Form 471 to the Administrator. All schools and libraries that are part of the same school district and seek priority two internal connections shall submit a completed FCC Form 471 to the Administrator as part of the school district in which they are located. A commitment of support is contingent upon the filing of an FCC Form 471. We seek comment on this proposed rule.

120. We also seek comment on whether we should require schools and libraries to submit applications for priority one services by school district. Commenters should address what, if any, additional burden such proposal may place on applicants. In addition, we seek comment on whether to limit applications for a school district to one for each category of service requested. For example, if the Commission retains the current priority one and priority two distinctions, an applicant could only submit two applications—one for each category. What are the advantages and disadvantages of such a requirement?

3. More Equitable Funding for Rural Schools and Libraries

121. In order to ensure more equitable access to E-rate funding, we seek comment on whether we should further

increase the discount rate or the amount of E-rate funds available for schools and libraries in rural areas or in remote rural areas. When the Commission created the E-rate program, it recognized that schools and libraries in rural areas would likely face higher costs for E-rate supported services, and therefore provided an additional 5–10 percent discount rate for rural schools and libraries that would otherwise receive a discount rate of 60 percent or less. E-rate has been crucial in supporting connectivity to rural schools and libraries. However, those schools and libraries in rural areas that also have a high percentage of students that qualify for free or reduced-price school lunches do not get an additional discount, even though there costs may be higher. We therefore seek comment on whether all rural schools and libraries, or those in remote-rural areas should receive additional E-rate support to recognize the unique challenges of providing services in rural, less dense areas.

122. Conversely, some commenters argue that the Commission should adjust the discount matrix so that E-rate applicants with similar levels of participation in the national school lunch program receive the same discount percentage, regardless of the location. Given that most E-rate funding goes to schools and libraries that receive discount rates above 60 percent, and therefore the majority of E-rate funds USAC commits are not subject to the discount, is there value in simplifying how discount levels are established for all schools and libraries, as these commenters suggest? Should our approach differ for priority one and priority two services?

4. Setting Budgets or Limits

123. In this section, we seek comment on whether we should impose a per-student or per-building budget, or similar limits, on funding for schools and libraries. Building on a recommendation of the 2003 USAC Task Force, Funds for Learning, an E-rate consultant that has analyzed USAC's data, has argued that appropriately-structured budgets on a per-student or per-building basis could lead to more equitable and predictable distribution of E-rate funds by limiting the funding that is allocated to a small number of high-spending applicants. According to Funds for Learning, 2012 funding requests averaged \$44.30 per-student for priority one services across all applicants, but more than 10 percent of applicants sought funding of at least \$180 per-student for priority one services. Notably, four school districts in the nation's largest cities requested at

least \$240 per-student, and more than a dozen other applicants sought over \$1,000 per student in total support in funding year 2012.

124. Some variation in funding is not surprising because discount rates range from 90 percent to 20 percent. Moreover, the Commission has always recognized that schools and libraries across the country would have different needs and different challenges in purchasing E-rate supported services. Yet the Funds for Learning analysis of funding year 2013 requests shows that applicants with higher discount rates also planned to spend significantly more per-student in pre-discount dollars for telecommunications and Internet access (priority one services). Those seeking 20–59 percent discounts plan \$35.23 per-student in pre-discount purchases of priority one services, while those seeking 60–79 percent discounts plan \$43.02 per-student pre-discount purchases for such services, and those seeking 80–90 percent discounts, \$86.53 per-student pre-discount purchases for such services. We also expect that a small rural school may have to pay more per-student for Internet access than a large urban school. However, Funds for Learning finds that some of the highest per-student costs are in urban areas, where competition should drive down prices. While the 2,360 applicants in large cities plan an average of \$67.88 per-student in pre-discount purchases for priority one services for funding year 2013, the 4,987 applicants in large, medium, and small-size suburban schools plan per-student purchases of priority one services averaging only \$40.76, \$39.17, and \$46.44 in pre-discount prices, respectively. Even the 3,129 applicants in “rural: distant” areas planned pre-discount purchases averaging only \$65.35 per-student.

125. In the *E-rate Broadband NPRM*, the Commission proposed a per-student cap on annual priority two spending for schools of \$15 per-student per year. A \$15 per-student cap would have limited the most disadvantaged schools to 90 percent of \$15 in support, or \$13.50 per-student per year. Notably, this amount is less than half the average per student funding amount for priority two funding over the past five years. Commenters argued that the proposed cap failed to account for a number of factors that could affect applicants' needs.

126. Having considered the record on that proposal, we now seek comment on whether we should consider a higher and more flexible per-student limit, per-building limit or alternative forms of limits or budget on an applicant's E-rate funding. If we adopt a per-student limit or other form of limit for some or all

services, we seek comment on where we might set the limit. Should any limits we adopt include adjustments to reflect the higher costs faced by applicants in more expensive-to-serve locations, such as Tribal lands? Should any such adjustment be based on observed current costs, some relatively simple and reliable proxies for costs, or some other measure? Should limits be set relatively high, so as to serve as a check on excessive funding requests and help prevent a few applicants from securing so much funding that other disadvantaged applicants are crowded out, while leaving most applicants unaffected? Alternatively, should limits be set lower to more aggressively spread funding annually to disadvantaged applicants that have rarely, if ever, received funding for internal connections?

127. We invite commenters to propose limits for either total annual funding, pre-discount requests, or for priority one and priority two purchases separately and ask commenters to explain their rationale for the limits that they recommend. We seek particular comment on Funds for Learning's most recent proposal calling for a per-student budget calculation. We note that we have sought comment on prioritizing broadband connectivity to and within schools and libraries, which could, among other changes, raise the per student cost of supported services for those schools and libraries seeking support for large installation and construction costs. How do we implement this prioritization of broadband connectivity while also instituting any of the potential funding limits? Should we consider excluding some costs from the limit, such as non-recurring installation and construction costs? Should we instead impose some other cap on costs related to the higher priority services?

128. We realize that anything but a very high per-student limit could prevent the smallest schools and particularly those in remote areas of the country, such as schools on Tribal lands, from affording supported services. Is this an argument for using per-building caps for certain types of services instead? As we did in the *E-rate Broadband NPRM*, we also seek comment on whether there should be a minimum amount of E-rate support for which a school, library, or school district is eligible, irrespective of the number of students, and what it should be. If a minimum amount is established, how should we compute that minimum? Should we provide for different limits depending on the number of students at a school or in a school district? If so,

what should those limits be? We also repeat our question about whether any limit should permit additional funding for rural applicants, either by establishing a higher limit for rural applicants or through some other mechanism.

129. We also seek comment on how to set caps for libraries if we were to take either approach above for schools. The *E-rate Broadband NPRM* suggested that library demand might be capped at the level of the public school district in which they were located, but it also noted that it might be advisable to modify that approach. We seek comment on the best way to set caps on E-rate support for libraries, whether based on the cap for the closest public school district, the size of their patron population, or some other figure or figures.

130. We are also particularly interested in any examples that commenters can offer of other funding programs in the United States or elsewhere that have used analogous per-customer caps effectively in other settings, for us to learn what might work best. We also welcome comments pointing us to examples of problems with funding caps that have arisen in other programs.

5. More Equitable Access to Funding for Internal Broadband Connections

131. As described above, internal connections are needed to make effective use of high-capacity connectivity to schools. High bandwidth connectivity to a school or library serves little purpose if students and patrons inside are not able to use it effectively because internal wired and wireless connections are missing or insufficient. Yet today, few schools are able to receive support for internal connections. Indeed some commenters have argued that lack of internal connections funding—due to increasing restrictions on the availability of priority two support—have become a barrier to adoption of higher speed connections for many schools and libraries. In this section we seek comment on how to increase access to funding for internal connections.

132. In order to provide more equitable access to priority two funding, in 2003 the Commission adopted a rule limiting each eligible entity's discounts receipt of discounts on internal connections to twice every five funding years (commonly referred to as the two-in-five rule). However, because requests for priority two funding exceed the E-rate funding cap, there is wide-spread agreement that a relatively small number of applicants, those that qualify

for the highest discount rates, receive priority two funding over and over again, while other applicants seldom qualify for priority two funding. Therefore, we seek comment on whether we should revise or rescind the two-in-five rule, and if so, what we should replace it with.

133. SECA recently suggested that the Commission rescind the two-in-five rule. Instead of using the two-in-five rule, SECA suggested that the Commission allow all applicants to receive funding on a rolling funding cycle. Under SECA's proposal, a different set of applicants would be eligible for priority two funding every year, until all applicants have been eligible for some priority two funding and then the cycle would start again. The benefit to the SECA approach is that it ensures all E-rate applicants have access to some priority two funding over time. If we continue to prioritize funding for some services over others, we seek comment on the approach offered by SECA.

134. *Eliminating the distinction between priority one and priority two.* Other commenters appear to support replacing the current prioritization system with a "whole networks" approach, under which connectivity to schools and internal connections are funded together and all eligible services are given equal priority. Commenters argue that this approach would give schools the flexibility to focus E-rate funding on those portions of their network where upgrades are most needed—whether connection to the schools or internal connections. It could also eliminate incentives for vendors to re-characterize priority two services as priority one, or for schools to purchase more expensive priority one services—like cellular data connections—in lieu of cheaper priority two services, like internal wireless connections.

135. We therefore seek comment on whether we should more fundamentally shift the way we prioritize E-rate support by eliminating the distinction between priority one and priority two services. Under this approach we would instead allow schools and libraries to choose from one consolidated menu of services. Would this approach allow more schools access to funding for internal connections? Would this additional flexibility be beneficial? If we instituted this proposal, how should we determine the amount of support that each school or library receives? And if we took such an approach, how would we prioritize among funding requests to the extent they exceeded the funding cap? Would such an approach necessarily require a per-student or per-

building limit, or other form of budget for individual applicants, as discussed above?

136. Are there other changes we should make to the prioritization of services? For example, instead of consolidating the two existing priority levels should we create more priority levels than currently exist? If so, what should be in the various categories and how should we transition services between the current priority levels and any new ones? Are there any other approaches we should consider?

6. Simplified Allocation of Funds to All Schools and Libraries

137. In this section, we seek comment on a more fundamental approach to changing the distribution of E-rate funding. Under this approach, we would eliminate the discount matrix and the priority system; instead, each eligible applicant would receive a fixed budget at the beginning of the funding year to spend on any eligible services of their choosing. In contrast to the existing system, whether or not a school or library receives funding would be determined at the beginning of the funding year; thus applicants could know the amount of funding available before committing to any particular project. We seek comment on this approach. We seek comment on the costs and benefits of this approach, how this approach would impact other proposals we have discussed herein, and whether it would further our proposed goals.

138. If we adopted the simplified-allocation approach, we seek comment on how we should allocate such funds among eligible applicants. One method of allocating funding to schools would be to allocate funds to each school (or school district) on a per-student basis. Rural schools facing higher costs and schools serving low-income areas or student populations would receive additional funding for each student. Thus, a school serving a rural area might receive twice as much per student as a school serving an urban area, or a school located in an area with high poverty might receive twice as much per student.

139. If we were to adopt a per-student allocation system, how much additional funding per student should rural schools receive? How much additional funding for schools serving low-income populations? Should these determinations be done on a bright-line basis (e.g., areas with poverty rates of more than 15 percent be classified "low-income" and those with less than 15 percent poverty "high-income") or should we use a sliding scale (such as

adjusting funding based on median household income, poverty rate, or some similar metric)? Should there be additional allocations for schools in remote areas (such as schools in the northern villages of Alaska)? If so, what criteria should we use for determining which schools should be eligible for additional allocations? Should there be a minimum funding level (a floor) or a baseline funding amount for all schools? We also ask that commenters explain how this approach and any modifications they offer would affect schools' and libraries' ability to purchase the E-rate supported services they currently receive, those they receive no discount for today under the priority system, and those they are likely to need in the future in order to meet our proposed goals for the E-rate program.

140. Under this system, how should the Commission allocate funds among libraries? For example, could we look at the number of patrons served by a library or the population it serves? Should we adjust the funding for libraries based on whether they are located in a rural or extremely remote area? Should we adjust the funding to reflect the wealth of the surrounding population? How do libraries determine the area they serve, and how could we adjust the allocation methodology to reflect the unique needs of libraries? Should we consider a per-building funding amount for libraries? We also ask commenters to explain the impact of this approach, and of any modifications they offer, to libraries' ability to meet their connectivity needs.

141. We also seek comment on how to allocate funding between schools and libraries. For example, should we look at the past allocation of distributed funds and reserve a similar proportion of the Fund for each group separately? Would allocating 90 percent of E-rate funding each year to schools and ten percent to libraries be a fair appraisal of historical spending patterns (or future spending needs)?

142. We also seek comment on how the simplified-allocation approach might impact group applicants, including school districts and consortia. For example, under this approach, should school districts be required to report the number of students at each school or could the school district simply report the total number of students in the district? If the latter, how should we calculate the per-student allocation, on a school-by-school basis or using some district-wide averaging? How do we ensure that all schools in a district or a consortia benefit from E-rate support? Would the

fact that vendors know the budget of each school, school district, or consortium impact the ability of districts and consortia to drive down prices by aggregating demand?

143. In turn, how might this proposal impact consortia? Today, funding for priority two services is determined in part by the student-weighted average discount-level of consortium applicants. Does that system impact priority two requests, given that a lower discount might prevent a consortium from receiving any funding at all? Under the simplified-allocation approach, each school or library in a consortium could know up front the number of E-rate dollars it can bring to the table, and each consortium could prioritize its spending as it sees fit. Would that knowledge aid or inhibit the formation of consortia?

144. If we adopted the simplified-allocation approach, what sort of matching requirements should we include to ensure that applicants spend E-rate funds prudently? As discussed above, just last year the Commission found that requiring recipients of Healthcare Connect funds to contribute 35 percent of the costs of services gave applicants a strong incentive to control the total costs of the supported services and "appropriately balances the objections of enhancing access to advanced telecommunications and information services with ensuring fiscal responsibility and maximizing the efficiency of the program." Could a lower matching funds requirement, such as requiring E-rate applicants to pay one dollar for every three E-rate dollars they receive, serve the same purposes for schools and libraries that depend on the E-rate program? Would such a requirement deter wasteful spending? Would a flat 25 percent matching requirement give applicants sufficient incentive to control the costs of supported services? Would the fact that they have a specific budget encourage some applicants to spend more money than they might otherwise, or would a specific budget aid schools in long-term planning and prudent spending? How would a flat 25 percent matching requirement impact schools' and libraries' ability to afford high-capacity broadband given that current contribution requirements range from 10 percent to 80 percent? Would it impose a hardship on certain schools, such as schools with few resources and facing extreme costs? If so, should there be an alternative matching requirement for such schools and under what circumstances?

145. We seek comment on the relative fairness to recipients of this approach

versus the current system or other options we seek comment on in this Notice. We seek comment on whether, under this approach, recipients would benefit from a more stable, and predictable level of support from year to year. Would such stability aid in long-term planning? We also seek comment on whether there are ways to implement this approach that would ensure that poor, rural schools and libraries that do not currently have access to high-capacity services get them.

146. Would the simplified-allocation proposal give local schools and libraries additional flexibility to meet their diverse needs, allowing some to prioritize higher-capacity circuits and others to prioritize connecting classrooms or deploying Wi-Fi? For example, could we retain support for basic maintenance and other services since funding availability will no longer depend on the specific services ordered by other schools and libraries?

147. One of the proposed goals is streamlining the administration of the E-rate program. We seek comment on whether adopting the simplified-allocation approach would further that goal or hinder it. For example, could we consider eliminating all or portions of our competitive bidding rules, and if so which ones? Under this approach, would schools and libraries' incentives to watch over their E-rate funds increase sufficiently to allow us to eliminate the 28-day waiting period? Should we eliminate the price as the primary factor requirement for competitive bidding? If we eliminate some or all of our competitive bidding requirements, should we continue to require applicants to conduct fair and open competitive bidding processes? How should we and USAC determine whether applicants' processes have been conducted in an open and fair competitive manner? How can we best protect against waste, fraud and abuse under the simplified-allocation approach?

148. We also seek comment on other administrative issues under the alternative funding approach. Should we eliminate FCC Forms 470 and 471 and replace them with a single-page form that requires the school or library to identify contact information, certify compliance with federal rules, and certify the number of students/patrons served? Would that initial application need to be filed several months before the start of the funding year (as FCC Forms 470 and 471 are today), or could the initial application be filed after the funding year begins? Could we eliminate the requirement that applicants for internal connections

funding file technology plans? Could USAC bear a greater part of the burden of calculating funding amounts for applicants to simplify the process for them? If so, after that initial application, USAC could provide the school with the total amount of funding available in a commitment letter and the school would have the flexibility to spend that funding on any eligible service. Are there other forms, deadlines, or requirements, such as the technology plan and technology-plan-review process, that we could eliminate? To actually receive money, could a school submit invoices or other proof that it has paid and received particular services? Would this approach reduce the time between funding commitments and disbursements? Why or why not, and by how much?

149. What sort of reporting requirements would work best under this proposal? How can we best ascertain that applicants actually purchased supported services and that they are being properly used? Should we, for example, require a school district superintendent or school principal to certify under oath that all supported services are being used to benefit students. Would such a certification make sense at the beginning of the E-rate funding process (such as on FCC Form 471) or at its end (such as on FCC Form 486)? Should libraries be subject to a similar certification requirement? For example, should libraries be required to certify that E-rate funds are being used to benefit their patrons? Would the head librarian be the appropriate representative for such a certification?

150. If we adopted this approach, how could we phase it in over time to give applicants time to adjust? Or would this approach require sufficiently fundamental changes in the program that a flash cut would be required?

C. Lowering New Build Costs and Identifying Additional Funding To Support Broadband to Schools and Libraries

151. In this section, we seek comment on what additional steps the Commission should take to ensure that there are sufficient funds to meet the connectivity needs of students, teaching staff, and libraries.

152. *Public-private partnerships.* Are there steps the Commission could take to improve the private sector business case for deploying fiber to schools and libraries, or otherwise expanding connectivity, and thereby reduce the need for E-rate funding? For example, are there steps the Commission could take to facilitate use of new fiber runs

for multiple business objectives, such as backhaul for cell towers or service to other enterprise users, and thereby incent greater sharing of new construction costs? Could waiving, forbearing from, or reducing certain otherwise-applicable requirements in conjunction with new infrastructure builds to schools and libraries help lower costs and therefore extend the reach of E-rate funding? Should the Commission condition certain forms of E-rate funding on changes in local permitting practices or other state and local policy changes (e.g., state and local dig-once initiatives) to help reduce new build costs? What impact would such a policy have on schools and libraries on federal or other trust lands, such as Tribal lands? How can the Commission best coordinate with and support state, local, and Tribal government efforts to increase broadband access to schools and libraries? Are there other Commission rule changes that would facilitate coordination or support state and local efforts?

153. We also seek comment on other potential public or private sources of funding and how the Commission could help encourage the deployment of such funding to meet school and library needs. For example, in addition to the possible changes to the discount matrix discussed above, could the Commission make certain types of E-rate support, or E-rate support above certain amounts, conditional on state, local, Tribal, or private funds above the otherwise-required school or library 10–80 percent contribution? Would a larger emphasis on matching funds help recruit additional funding from state, local, or private-sector sources? Would it disproportionately benefit schools with greater means or higher-income student populations? What impact would such an approach have on schools and libraries located on Tribal lands? Should schools and libraries operated by the Bureau of Indian Affairs or individual Tribal governments be exempt from such a requirement?

154. Are there other steps the Commission could take to encourage public-private partnerships to promote our proposed E-rate goals? For example, Verizon suggests that its Verizon Foundation Innovative Learning Schools program, which focuses on teacher training and professional development for select schools nationwide, complements E-rate but sometimes faces challenges with respect to E-rate gift rules. We seek comment on whether there are ways that E-rate could allow schools and libraries to take greater advantage of private philanthropy while still allowing the

Commission to maintain appropriate control over E-rate expenditures and to prevent improper influence over E-rate service provider selections.

155. *Coordination with other universal service programs.* We also seek comment on whether greater coordination of E-rate funding with funding from other universal service programs could multiply the impact of these other programs to support the goals of E-rate. In the *USF/ICC Transformation Order*, 76 FR 78384, December 16, 2011, the Commission adopted broadband service obligations for eligible telecommunications carriers (ETCs) that receive high-cost support. The Commission noted that it expected ETCs to engage with community anchor institutions, which include schools and libraries, in the network planning stages with respect to the deployment of Connect America-supported networks. Both price cap and rate-of-return ETCs that receive high-cost support are already required to include in their annual reports the number, names and addresses of community anchor institutions to which the ETC newly began providing access to broadband service in the preceding calendar year.

156. We seek comment on how to minimize any overlap in funding for broadband, while extending the reach of both programs to support the deployment and adoption of broadband by E-rate applicants? How can we best ensure and encourage the two support mechanisms to achieve our universal service objectives, including the goals identified herein? For example, should we consider what portion of deployment should high-cost funding support and what portion should E-rate support? Would it be useful to specify that certain costs—such as construction charges to extend fiber to the school or library property line—are funded by high cost, and other costs—such as recurring charges for broadband service—are funded by E-rate? What measures should we adopt to ensure that there is no duplicative funding of the same facilities or services from the two programs?

157. The Commission has concluded that a forward-looking wireline cost model will be used to determine support to be offered to price cap carriers. After the model is finalized and adopted for Phase II purposes, should we consider how it might be used or modified to assist in determining the cost of providing fiber-based broadband to the E-rate applicants in the relevant geographic area? Could we use a model-derived cost to establish a benchmark for the prices an E-rate applicant should pay for broadband? Should we instead

consider a model-derived cost—with the relevant E-rate discount applied—as a cap on the amount the E-rate program will fund for such broadband?

158. We also ask for comment on how we can maintain the core requirements and procedures in the E-rate program if we closely coordinate support with other universal service programs. How could we implement some of these ideas while maintaining the framework of the existing competitive bidding requirements for the E-rate program?

159. In the *Healthcare Connect Fund Order*, the Commission allowed an exemption from the rural health care competitive bidding obligations for health care providers entering into a consortium with E-rate participants. Should we consider a similar accommodation for applicants to the E-rate program?

160. *Funding the proposed goals through E-rate.* In this Notice, we seek comment on various approaches to refocusing or reprioritizing funds, or adjusting the support levels for certain services, as well as other proposals that will reduce costs while better targeting support to help schools and libraries get the connectivity they need. We seek comment on whether, in concert with these changes, enough funding will be saved or preserved to enable the E-rate program to meet our proposed connectivity goals within the existing E-rate funding cap. Recent reforms to the other USF programs were achieved without having to increase the overall size of the USF. For example, the Commission established a budget for the Connect America Fund and a savings target for the Lifeline program. Also, the Commission recently reformed the Rural Health Care program to encourage consortium applications, increase eligibility in covered services and provide applicants more flexibility in renewing multi-year contracts. We ask commenters to identify the funding that could become available as a result of the reforms suggested in this NPRM and whether these reforms will result in sufficient cost savings to the E-rate program to meet our proposed program goals.

161. Alternatively, we seek comment on whether a temporary increase in the E-rate cap is necessary to reach our goals and ensure high-capacity broadband connectivity to and within schools? If we were to authorize such a temporary increase, should we modify our rules to focus the temporary funds on providing services related solely on high-capacity broadband connectivity? What services should be eligible for support under such a short-term program? How much short-term funding

would be needed to connect all or virtually all schools to infrastructure or other connectivity sufficient to meet their needs? How much short term funding, and over what period of time, would be needed to provide robust internal connections sufficient to take advantage of the high-capacity broadband connectivity to schools and libraries? Should any such funding be allocated using the generally applicable discount matrix, application process, timeline, and other rules, or should we consider modifications, for example to accelerate availability of funding for upgrades? If we consider a temporary increase in E-rate funding to upgrade school and library connections for digital learning, should we limit participation to only some category of applicants, such as only regional consortia?

162. Should we instead consider a more permanent change to the cap to achieve the goals of a modern E-rate program? When the Commission adopted the \$2.25 billion cap 16 years ago, it recognized that it was a best efforts attempt to estimate what the demand would be for telecommunications and Internet access services by schools and libraries. Commenters advocating an increase in the cap emphasize that every funding year applicants have requested more than is available in E-rate support. They further argue that because of the effects of inflation and the growth in the number of students in our nation's schools, the actual purchasing power of the E-rate program declined by nearly one third from the start of the program in 1998 to today. We seek comment on these arguments.

163. Also, under either a temporary, long-term or permanent approach to providing additional funding, would it make sense to initially provide funding to a small group of schools and libraries on a competitive basis with the goal of developing best practices and cost-effective approaches to building out high-capacity broadband services? Are there other ways to use competitive approaches to maximize the impact of funding?

164. We also seek comment on the appropriate role for the Federal-State Joint Board on Universal Service in providing the Commission with advice and guidance on any temporary, long-term or permanent approach to providing additional funding for the E-rate program. For example, if we consider any increase in E-rate funding, should we first seek the opinion of the Joint Board regarding the necessity and the amount of the increase?

IV. Maximizing the Cost Effectiveness of E-Rate Funds

A. Increasing Consortium Purchasing

165. In the *Universal Service First Report and Order*, 62 FR 32862, June 17, 1997, the Commission envisioned that allowing schools and libraries to participate in consortia would aggregate demand to influence existing carriers to lower their prices and promote efficient use of shared facilities. The Commission expected that consortia would be particularly important in rural regions to negotiate lower rates as well as secure efficiencies. Today, there are more than 400 consortia, representing more than 9,400 schools and libraries (which include schools in more than 800 school districts), participating in the E-rate program. Every state in the nation has at least one consortium and many states have multiple consortia.

166. At the same time, in funding year 2011, consortium purchasing accounted for only about \$300 million of E-rate funds committed by USAC, or about 13 percent of all E-rate funds disbursed. In the recent *Healthcare Connect Fund Order* the Commission found that bulk purchasing by consortia helped drive down service rates, increase bandwidth, improve service quality and reduce administrative overhead. We therefore seek comment on whether we should adopt additional incentives or mechanisms to facilitate the use of consortium purchasing in the E-rate program. In particular, we are interested in ways that consortium purchasing can drive down prices and otherwise benefit applicants and the E-rate fund.

167. We also seek comment on whether there are legal, geographic or other barriers preventing certain schools and libraries from taking advantage of consortium purchasing. Are there ways in which our rules prevent or discourage participation by applicants who might otherwise join a consortium? We invite commenters to identify specific amendments we can make to our rules to ensure that applicants can join or form consortia.

168. Are there other actions the Commission can take to remove barriers to participation in consortia? We recognize that not all applicants choose to join a consortium and we therefore ask about the factors that contribute to an applicant's decision to join or not to join a consortium. In particular, we seek comment from applicants on how they weigh the administrative benefits of joining a consortium in the E-rate program against the burdens the program imposes today. We seek comment on whether there are consortia-friendly application processes

that would minimize the administrative burden on applicants and USAC. Should we, for example, prioritize consortium applications in the USAC review process? Should we allow for prioritization for all consortia or only those that, for example, include the neediest schools and libraries? In what ways should we streamline the consortia review process? What steps should we take to avoid disadvantaging schools and libraries unable to participate in consortia, such as some schools and libraries on Tribal lands?

169. We also seek comment on whether particular types of services lend themselves better to consortium purchasing. For example, we note that while schools and libraries might join consortia for broadband access, they might apply independently for internal connections. In particular, we seek comment on whether consortia are effective vehicles for driving down specific costs, such as equipment purchases or broadband access.

170. We seek comment on whether our consortium procedures have different impacts depending on the composition of the consortia. For example, are there disparate impacts between consortia that include only schools, or only libraries, or both schools and libraries? Is the formation of consortia impacted by potential disparities in discount levels? Are consortia that include other entities such as health care providers and/or public sector entities such as state colleges and universities, educational broadcasters, counties, and municipalities impacted in different ways? While we seek comment on these consortia configurations, we also open the inquiry to whether there are other entities that join with schools and/or libraries to create consortia and whether there are specific impacts on those consortia. Given the potential efficiencies of broadband networks that serve multiple types of anchor institutions, are there steps we can take to facilitate the formation of consortia that extend beyond schools and libraries?

171. Finally, while we are eager for schools and libraries to secure the many benefits that consortia can provide, we are mindful that aggregation of applicants can also diminish competition. We seek comment on whether service providers who would compete to serve some of the entities in a consortium might not bid if they could not serve the entire consortium. As a result, a larger consortium could leave a single bidder facing little pressure to pass on any reduced costs to applicants. We seek comment on what the

Commission might do while encouraging cost-saving consortia so as to minimize, if not avoid, negative effects on competition.

B. Encouraging Other Types of Bulk Buying Opportunities

172. We seek comment on how best to encourage other types of bulk buying of E-rate supported services. Currently, consortia are one of many ways that E-rate applicants aggregate demand for E-rate supported services in order to reduce prices and procure necessary services. In some cases, E-rate applicants purchase from state master contracts, which offer prices, terms and conditions negotiated by a state on behalf of a wide range of public institutions within that state. In many places, state or regional research and education networks (R&E networks) are also available and offer bulk purchasing opportunities for applicants. In other cases, E-rate applicants may be able to take advantage of regional contracts managed by public, non-profit or private entities that also aggregate demand and manage the procurement process. Should applicants be required to purchase from these state master or regional contracts in which they may participate, unless they can receive the same services for a lower price? We seek comment on the benefits and burdens of these and any other methods that E-rate applicants currently use to aggregate demand for E-rate supported services and request that commenters provide data on how effective such approaches are for driving down prices and creating administrative efficiencies for E-rate applicants. We also invite applicants to identify and comment on other methods of bulk buying that exist outside the E-rate program and whether such methods could be successfully adapted to the E-rate program.

173. We also seek comment on whether the Commission, working with USAC or some other entity, should create a formal bulk buying program for E-rate supported services. If so, are there specific products or services that such a program should cover? For example, are there certain products, like wireless routers, that are standard or common to school and library networks nationwide? Generally, how would such an initiative work within the structure of the current E-rate program? How would such a program appeal to applicants?

174. If we adopt a bulk buying program, should we amend our rules so that purchases made using the program would be exempt from our competitive bidding requirements? Would we incentivize participation by preempting

all or some of the USAC review processes for applicants who purchase through the bulk buying program? How should we treat applicants who purchase products and services that are available through the bulk buying program, outside of the bulk buying program? Should we, for example, treat the prices available through such a bulk-buying as the maximum price for which an applicant can seek support?

175. On the other hand, are there benefits to consortium membership or independent purchasing that could be lost if we were to encourage alternative bulk-purchasing arrangements? By suggesting one bulk buying option, we do not intend to foreclose others, and seek comment on other options.

176. We also seek comment on whether E-rate applicants can lower costs by aggregating data traffic. As we noted earlier, many schools and libraries use district-wide or regional WANs to provide broadband connectivity between buildings. Similarly, state R&E networks can provide high capacity routes from major locations within a state, relying on national networks for long-distance connections and local connections to reach smaller communities and buildings within a community. By partnering with WANs or R&E networks and aggregating Internet traffic, schools and libraries may be able to further drive down prices. E-rate applicants may also work with WANs and R&E networks to purchase circuits and network equipment in bulk and to take advantage of knowledge and relationships with commercial service providers. We seek comment on policies that we can adopt to encourage E-rate applicants to leverage these other networks to lower prices.

C. Increasing Transparency

177. We also propose to increase the transparency of E-rate spending and specifically the prices E-rate applicants pay for service. Increasing such transparency may aid oversight of the E-rate program and drive down the prices of E-rate supported services. We seek comment on directing USAC to publish more granular information about E-rate spending and on how to collect such information. We seek comment on whether increasing price transparency will result in schools and libraries paying less for E-rate supported services and on ways we can assist in making prices for E-rate supported services more transparent. More specifically, we propose options for informing schools and libraries about the prices at which service providers are willing to offer for E-rate supported services. We seek

comment on the options we propose and invite commenters to offer other suggestions.

178. *Transparency of E-rate spending.* We seek ways to increase transparency with respect to how E-rate funds are allocated and spent. The National Broadband Plan, for example, recommended that we “collect and publish more specific, quantifiable and standardized data about applicants’ use of E-rate funds.” We accordingly seek comment on whether USAC should be required to create a Web site where any American could easily look up the details of how any participant in the E-rate program had used its funds in any given year. How should such information be organized? At what level of detail should it be reported? Would such a Web site provide valuable information to parents? Would it encourage officials to spend money more wisely? How else can we increase the transparency of E-rate spending, including the access that local journalists, school boards, librarians, city governments, and parents have on how E-rate funds are allocated and on what they are spent?

179. Below we seek comment on ways to streamline the E-rate application process. In line with that discussion, how can we minimize the reporting burden on schools and libraries while maximizing the insight the American public has into the spending of E-rate funds? For example, schools report certain characteristics such as the number of classrooms connected on the current Form 471, but that information must be reported before a school has completed a project and before a school has even received a commitment of funding. Could we reduce this burden by instead requiring the disclosure of relevant information (such as capacity leased or wireless access points purchased) on the back-end as part of the invoicing/payment validation process (perhaps as part of Form 486)? Should we require such reporting in a standard format or allow or encourage a fuller description? In short, can we simultaneously increase the transparency of E-rate spending while reducing the burden on applicants?

180. *Transparency of prices available for E-rate supported services.* We seek comment on how best to increase the transparency of prices for E-rate supported services. Are there publicly available online forums, blogs or other media, where schools and libraries can share information about the best prices and deals for E-rate eligible services? If not, or if currently available information is insufficient, we seek comment on what role, if any, the Commission or

USAC should have in operating, hosting or endorsing Web sites or other ways of encouraging service providers to share pricing information with E-rate applicants, and facilitate price comparisons. We invite commenters who have experience with other information exchanges to comment on examples of what does or does not work in other contexts, and whether there are models we should look to in unrelated markets or other countries.

181. *Transparency of prices being bid for E-rate supported services.* Our competitive bidding rules require applicants to publicly seek bids for E-rate supported services, but our rules do not require applicants or service providers to make the responses to those bids public. Should we consider making bid responses public or at least accessible to other E-rate applicants? Would it be advisable to release this information only after the applicant has selected a vendor for the requested services? Are there any state laws, court orders, or contracts expressly prohibiting such disclosure? If we do require public disclosure of bid responses, what is the best format and timing for making such responses public in order to maximize the usefulness of such information to other E-rate applicants? To what extent would publicizing such bids drive down prices, both with respect to specific applications and more generally? On the other hand, is there a risk that public bid responses inflate bid prices for E-rate supported services by, among other things, discouraging providers from bidding to provide E-rate supported services? Could such disclosure facilitate tacit collusion to restrict competition through coordinated pricing, market allocation or other approaches that would inflate the price or reduce the quality of E-rate supported services? We also seek comment on the degree to which state, local, and Tribal laws currently require the disclosure of bid responses for E-rate supported services, and whether service providers can and do limit any such public access.

182. *Transparency of actual purchase prices.* As an alternative to requiring public disclosure of all bids to provide E-rate services, we seek comment on making available the prices applicants are paying for E-rate supported services. We note that applicants currently provide that information to USAC. We seek comment on whether we should direct USAC to permit public access to FCC Form 471, Item 21 information or any other information provided by either applicants or service providers participating in the E-rate program. Are there any state laws, court orders, or

contracts that would prohibit such public disclosure? Should we limit disclosure of pricing information to other E-rate applicants? We also seek comment on whether requiring public disclosure of the prices applicants actually pay for E-rate supported services create a more effective competitive marketplace for those services and products, or might service providers eschew participation to shield their prices from public view. Could such disclosure facilitate tacit price fixing, bid rigging or market allocation schemes, thus inflating the price of E-rate supported services? In the alternative, do commenters believe that publicly displaying prices may encourage more service providers to approach individual schools and libraries with lower prices and discourage participation in consortia or other aggregate buying groups? Might transparency of pricing also help ensure that providers are complying with the Commission's lowest corresponding price rule?

183. Finally, we note that § 54.501(c)(3) of our rules requires service providers to "keep and retain records of rates charged to and discounts allowed for eligible schools and libraries—on their own or as part of a consortium. Such records shall be available for public inspection." We seek comment on the extent to which applicants can and have availed themselves of that provision of our rules to determine the prices paid by other applicants for E-rate supported services. We also seek comment on the benefits and shortcomings of that provision of our rules and whether we can and should amend it to increase pricing transparency in order to drive down prices of E-rate supported services.

184. *Greater Assistance to Schools and Libraries.* We also seek comment on whether the Commission, USAC, or other entities should take a more active role in assisting applicants in identifying cost-effective purchasing options. The Commission previously directed USAC to develop a pilot program testing an online list of internal connections equipment eligible for discounts. USAC has not updated the database in some time in part because keeping the list current imposed significant administrative burdens on both USAC and vendors. We propose to terminate that pilot program and we invite participants to comment on how the Commission can transition to a more effective system to provide more transparent price information for applicants. For example, should we direct USAC to establish an office to help applicants identify the best prices

for E-rate eligible services and products? Such an office could be staffed by consultants with expertise in configurations of educational technologies and the best prices and service providers, and could mine the USAC E-rate databases to identify and publicly disclose attractive prices, terms and conditions for the products and services. We seek comment on the likely cost of providing that sort of expert assistance and whether the benefits of such an undertaking would outweigh its costs. We also ask whether we can, or should, limit access to this pricing data to participants in the E-rate program.

185. If we adopt such an approach, should we amend our rules so that applicants who chose a product or service at the price posted on the Web site would be exempt from any additional competitive bidding requirements for such purchases? We seek comment on ways to implement such a proposal. How should the office identify best terms? What criteria should the office use to filter the information?

186. We also seek comment on whether we should direct USAC to employ a team of technical experts who could assist applicants in planning and designing cost-effective networks? Is there a need for such assistance? What are the costs and benefits of housing a team of technical experts at USAC? How should such a team prioritize its work to be most beneficial to schools and libraries and help drive efficiencies in E-rate purchasing?

187. Are there entities other than the Commission or USAC that could perform this function? For example, could USAC or the Commission assemble a list of school chief information officers or other officials from better-resourced districts that could serve as advisors to smaller or lower-resourced districts? Are there other approaches the Commission should take to ensure schools are planning to efficiently and effectively meet their needs?

D. Improving the Competitive Bidding Process

188. To maximize the cost-effectiveness of purchases made using E-rate funds, we seek comment on the current competitive bidding process, and ask how the Commission can reduce the number of E-rate recipients that do not receive multiple bids, and whether the lowest corresponding price rule helps ensure that E-rate recipients receive cost-effective prices. While USAC does not collect comprehensive information about the quantity or quality of the bids received, there is

anecdotal evidence that a substantial number of E-rate applications receive one or no viable competitive bids. We seek comment on whether the current competitive bidding process typically results in multiple competitive bids, and ask commenters to elaborate on the characteristics of recipients that do not ordinarily receive multiple bids. We also seek comment on whether the current competitive bidding process continues to address the needs of the schools and libraries program, or if a different application process would better suit applicants' needs. We specifically request that commenters discuss how the current competitive bidding process and any proposed processes ensure that schools and libraries are selecting the most cost-effective services to meet their unique needs, that service providers are offering the lowest prices available, and that we continue to minimize waste, fraud, and abuse in the program.

189. *FCC Form 470.* We also seek comment on how we can ensure that applicants select cost-effective services in situations in which no entity, or only one entity, responds to a FCC Form 470 posting. Under the competitive bidding requirements, eligible schools and libraries that wish to receive support for discounted services must submit an FCC Form 470 to USAC. The FCC Form 470 describes the applicant's needs and notifies service providers of the applicant's intent to contract for eligible services. After the FCC Form 470 has been posted to the Administrator's Web site for 28 days, the applicant may contract for the provision of services and file an FCC Form 471, requesting discounts for the services. In some situations, however, there may be only one service provider capable of, or willing to, provide the requested service. How can we ensure that the prices for such services are reasonable, and do not waste scarce universal service funds? Should we adopt bright line rules that would impose limits on the amount of discounts available in such situations, or would that unfairly penalize applicants in areas where there are limited numbers of service providers (e.g. on Tribal lands)?

190. Currently, if an FCC Form 470 filer receives no bids, the applicant is allowed to solicit bids from service providers. Should the Commission create separate requirements for E-rate applicants that receive no bids from service providers to ensure that services are procured at reasonable prices? Are there steps we should take to avoid imposing additional administrative burdens on schools and libraries located in areas in which there is no

competition for supported services, such as some Tribal lands? Are there resources available at the state or regional level that could assist these filers in finding vendors to provide E-rate-supported services at reasonable rates? For instance, we have anecdotal evidence that E-rate applicants may be unaware of state master contracts or cooperative purchasing organizations, such as the Western States Contracting Alliance, that could be beneficial to them. Should USAC post guidance on its Web site or take other steps to assist E-rate applicants in finding these resources? Should applicants be required to certify that they have reviewed state master contracts before selecting a vendor?

191. We also seek comment on whether the current system of applying for discounted E-rate services provides potential vendors enough information to formulate bids. We seek comment on whether the FCC Form 470 is the proper tool for adequately informing vendors of the services schools and libraries are seeking through the E-rate program. Does the format of the FCC Form 470 limit the pool of service providers seeking new business? Is the information provided on the FCC Form 470 sometimes so broad or narrow as to limit the number of vendors that could reasonably respond to the posting? The Commission has previously found that an overly broad or generic FCC Form 470 posting may stifle competition among service providers. In the *Ysleta Order*, 69 FR 3349, January 23, 2004, the Commission clarified that such broad FCC Forms 470 are not consistent with our rules and that the FCC Forms 470 should mirror the level of complexity of the services and products for which discounts are being sought.

192. Our rules require E-rate applicants to “conduct a fair and open competitive bidding process,” as spelled out in our rules. Our rules also require E-rate applicants to comply with state and local competitive bidding requirements. We seek comment on whether we should exempt certain applications or applicants from the E-rate competitive bidding rules on the basis that they are complying with state and local competitive bidding requirements. Commenters should identify the criteria they recommend using for selecting which applications or applicants should be exempt from our competitive bidding requirements, and how we can assure that such an exemption does not increase the opportunity for waste, fraud, and abuse, and, if so, what criteria should be used for any exemptions. If we adopt this exemption, should we limit it to

purchases below some threshold? What should that threshold be? We seek guidance on providing USAC a practical, reliable, and minimally burdensome way to confirm that the applicants claiming such an exemption had actually complied with these procurement processes. We also seek comment on what USAC should consider as sufficient documentation of compliance with state or local procurement rules. Further, we seek comment on whether we might consider a *de minimis* exemption. For example, if an applicant’s total annual E-rate purchases fall below some minimal threshold, should that applicant be exempt from the competitive bidding requirements? What should that threshold be?

193. Many states negotiate state master services agreements (State MSAs) for services eligible for E-rate support. Should we allow applicants to purchase off a State MSA without the applicant or the State MSA having gone through our competitive bidding process? What are the benefits and burdens of such an approach? If a State MSA offers purchasing options for the same or functionally equivalent products or services at different prices, should we require an applicant select the lowest price offering if it wants to select off the State MSA and be exempt from our competitive bidding rules? In the alternative, under such circumstances should we require applicants to follow currently required process and evaluate all the options on the State MSA using price as the primary factor in selecting a vendor? We note that some State MSAs do not contain specific prices for goods and services, under those circumstances we would not be inclined to provide E-rate support for goods and services purchased off a State MSA, and we seek comment on that issue.

194. Finally we seek comment on whether to revise the deadline for applicants to sign a contract with their service provider. We note that sometimes applicants have difficulty obtaining signatures or final board approvals prior to their submission of their FCC Forms 471, as is currently required by the E-rate rules. Commenters are invited to offer specific examples of difficulty they have had obtaining a signed contract in a timely fashion, and propose alternatives to the current deadline for obtaining a signed contract. We also seek comment on whether modifying this requirement would lead to waste, fraud, and abuse and we invite comments on how to minimize that risk.

195. *Lowest Corresponding Price (LCP)*. We also seek comment on the extent to which the LCP rule helps ensure that service providers charge cost-effective prices. In section II.A.2, we sought comment on using the LCP rule to measure progress towards our proposed goal of ensuring applicants have affordable access to broadband. The LCP rule requires service providers to charge the lowest price that a service provider charges to non-residential customers that are similarly situated to a particular E-rate applicant for similar services. We specifically seek comment on the role of the lowest corresponding price rule for competitive bidding. If an applicant receives only one bid or no bid for services should the applicant be required to report that fact to USAC? If an applicant receives only one bid or no bids, should USAC automatically engage in additional review of the application to determine whether the service provider has offered the lowest corresponding price? Or, should USAC only do additional review under those circumstances if the price for the service at issue is flagged as higher than similar services? If USAC should conduct further pre-commitment review for compliance with the LCP rule, what is the least burdensome but effective method for determining whether the service provider is offering the LCP?

196. We also seek comment on the clarity of the LCP rule. In 2010, US Telecom and CTIA (together Petitioners) petitioned the Commission to issue a declaratory ruling to clarify the scope and meaning of the Commission’s LCP rule. More specifically, Petitioners requested that the Commission clarify that: (1) The lowest corresponding price obligation applies only to competitive bids submitted by a provider in response to a Form 470; (2) the lowest corresponding price obligation is not a continuing obligation that entitles a school or library to constantly recalculate the lowest corresponding price during the term of a contract; (3) there are no specific procedures that a service provider must use to ensure compliance with the lowest corresponding price obligation; (4) in determining whether a service bundle complies with the lowest corresponding price obligation, discrete elements in such bundles need not be individually compared and priced; and (5) in a challenge regarding whether a provider’s bid satisfies the lowest corresponding price obligation, the initial burden falls on the challenger (*i.e.*, a school or library) to demonstrate a *prima facie* case that the bid is not the lowest corresponding price. The

Commission sought comment on that petition, and we now invite commenters to refresh the record on whether it is necessary to clarify the scope and meaning of the LCP rule.

E. Efficient Use of Funding

197. We seek comment on how best to ensure that any given E-rate application reflects a cost-effective approach to filling the applicant's need for E-rate supported services. Our competitive bidding rules require that price must be the primary factor when selecting a winning bid and that applicants must select cost-effective service offerings. We seek comment, however, on whether our rules and our enforcement mechanisms are sufficient to ensure cost-effective purchasing on an application-by-application basis.

198. This is not the first time the Commission has sought comment on this issue. In the 2003 *Schools and Libraries Third Report and Order*, 69 FR 6181, February 10, 2004, the Commission sought comment on whether to codify additional rules to ensure that applicants make informed and reasonable decisions in deciding which services they will seek discounts. Given that demand for E-rate funding greatly exceeds the cap and that there is a wide disparity in the amount of funds on a per-student basis that applicants seek, it is time to refresh the record on this issue. Specifically, we seek comment on how to ensure that applicants are not receiving support for expensive services that provide functionality that they do not need and will not use and that applicants are not selecting expensive priority one services simply because they are supported services, when less expensive services would fill the same need.

199. As part of our effort to ensure that applicants are making cost-effective purchasing decisions, we seek to refresh the record on whether we should adopt bright line tests, benchmark or formula for determining the most cost-effective means of meeting an applicant's technology needs. For example, should we establish limits or guidelines on purchases of certain kinds of equipment based on reasonable per-classroom, per-teacher, or per-library technology needs? If so, what are appropriate bright line tests, benchmarks or formulas? Would we need a process for granting exceptions, and if so, how should it work? As an alternative to setting hard limits, should we make purchases of equipment above per-classroom, per-teacher, per-student, or other limits a lower priority?

200. Our rules require that an applicant establish that equipment and

services are installed and in use. Should we require that an applicant regularly use all of the functions provided by an E-rate supported service? If an applicant has requested and installed an E-rate supported service, but does not use all of the functionality of the service, has the applicant violated the requirement to engage in cost-effective purchasing? Does it matter if no other vendor services more closely matched the needs of the applicant?

201. We seek comment on whether applicants seek support for priority one services because they know they will receive support for those services, when in reality the services they need or are seeking are unsupported services, or priority two services that are often not funded. We noted above that many applicants purchase expensive cellular data plans and air cards that are funded as priority one services, instead of using less expensive local area network (LAN) services, which are priority two services. Is this an example of applicants seeking support for priority one services because they do not expect to qualify for priority two services, given the E-rate program's funding cap? Are there other examples of such practices? How can the Commission discourage these practices and encourage participants to select the less expensive services? Would the proposals discussed above to reprioritize the E-rate supported services help address this issue?

202. We seek comment on how our cost-effectiveness rules should apply to multi-year contracts and to purchases of ongoing services. Should we encourage or require schools and libraries to take a long-term view of cost-effectiveness? How can we provide E-rate applicants assurance that significant investments which raise costs in the short term but significantly lower recurring costs will not run afoul of our rules, while continuing to protect against wasteful or inefficient purchases? We are particularly interested in this question as it relates to the deployment of new broadband connections to schools and libraries.

F. Broadband Planning and Use

203. We next seek comment on measures E-rate applicants should take in order to ensure they are carefully assessing their need for and readiness to use high-capacity broadband. Should we require schools and libraries seeking support for high-capacity broadband to undertake a formal review and assessment of their broadband needs—both to the premises and within the premises? Such an assessment could not only help applicants determine their

broadband connectivity needs but also encourage efficient and cost-effective purchasing decisions. Should we condition receipt of E-rate funds on certain criteria for the broadband assessments and if so, what should those criteria be? For example, should we require schools to plan for providing a device to every student or for a device to a small group of students? Should we require schools and libraries to conduct professional development sufficient to ensure that their staffs have the knowledge and skills to take advantage of high-capacity broadband as well as the devices and applications? Should applicants be required to demonstrate that they have specific plans for using the bandwidth? Who is in the best position to evaluate and, if necessary, approve these assessments, and help schools close any gaps? What should be the consequences be if an applicant conducts inadequate needs assessment and planning, and what resources could be made available to help them improve?

204. In the *Schools and Libraries Sixth Report and Order*, the Commission eliminated technology plan requirements for E-rate applicants seeking only support for priority one services in order to simplify the application process for those schools and libraries. We seek comment on lessons learned from our current and previous technology plan requirements and whether we should consider any elements of those requirements if we implement a broadband assessment requirement. In particular, how can we make such assessment as simple and objective as possible? Is an objective checklist or scorecard approach for school planning and readiness feasible?

205. We seek comment on quantifying the burdens schools and libraries face when completing current technology plans in compliance with federal requirements and the approval process? If we eliminate the technology plan requirement, and do not otherwise require E-rate applicants to assess their broadband needs, would schools and libraries continue to develop technology plans, or their equivalents, and if so how might they differ from current plans developed in order to access priority two funding?

G. Innovative Approaches to Encouraging Maximum Efficiency

206. Finally, as we consider various ways to maximize cost-effective purchasing in the E-rate program, we seek comment on whether utilizing scaled down testing of various approaches to purchasing would help identify the most successful practices as

well as less effective ideas. Towards that end, we seek comment on whether we should establish one or more programs to foster innovation and highlight specific, scalable best practices for purchasing E-rate supported services that eligible schools and libraries can use to drive down the cost of E-rate supported services.

207. Such a program could, for example, allow experimentation use of consortia, establish novel bulk buying opportunities, and/or test ways to streamline procurement for eligible schools and libraries. A pilot program could also provide an opportunity for the Commission and USAC to gather data about other innovative approaches to lowering costs by incenting cost-reducing measures. Pilots could, for example, offer greater discounts for participants that are able to significantly decrease the pre-discount costs of the services they purchase. This would allow participants to realize a greater share of the savings from cost-reductions. Alternatively, we could allow pilot participants to use savings from reduced spending on priority one services toward priority two services, outside the otherwise applicable prioritization system.

208. We seek comment on these options for pilot programs, and whether such programs would be an efficient use of E-rate funds. We also seek comment on other potential pilot designs, and other potential financial and administrative incentives for participation in purchasing pilot programs. How can we set up these incentives to account for the fact that some short-term investments may result in long-term cost savings? Are there other approaches we should consider to incentivize eligible schools and libraries to find the lowest price? Should we consider adopting any of the pilot program proposals discussed above for the E-rate program as a whole, without first conducting a pilot?

209. We also seek comment on what data we should collect as part of a pilot program, and to measure the effectiveness of the program. In evaluating the results of any pilot program, we would propose to consider, among other things, the quantity of services supplied, the prices per component, the expenses per-student, and the distribution of cost across districts of varying incomes. Are the other factors we should consider? What would be the most appropriate mechanism for sharing this data? How would we maximize the likelihood that any innovations developed in a pilot program could be repeated throughout the country?

V. Streamlining the Administration of the E-Rate Program

210. We propose that streamlining the administration of the E-rate program should be the third goal of the program to address concerns about the complexity and associated burdens of the current E-rate application and associated review process. Applicants for E-rate funds are required to complete approximately six FCC forms over the course of a funding year. Some applicants spend many hours not only filling out FCC forms and gathering required data, but also responding to questions from USAC and requests for additional information, including documentation. As a result, many applicants feel the need to hire consultants to handle these tasks. While consultant fees cannot be paid using E-rate funds, they are a cost to program participants, and therefore may reduce the net benefits that schools and libraries realize from participation in the E-rate program.

211. Moreover, funding review decisions can be delayed while USAC seeks to resolve issues that arise during USAC's application review process, such as ensuring that: only eligible entities receive funding for eligible services; the competitive bidding process was fair and open; the applicant has the necessary resources to make use of the requested services; and there are no discrepancies between the information on the funding request and the associated FCC Form 471 Item 21 attachment. When that happens, applicants find themselves pressed to make purchase decisions with imperfect information about the status of their applications or their prospects for receiving E-rate funding. Further, because USAC must still enter some applicants' paper filings in electronic form in order to process them, USAC's efforts to expeditiously process applications and other forms can be handicapped. At the same time, the Commission and USAC are responsible for protecting the E-rate fund from waste, fraud and abuse. Many of the burdens imposed on applicants are rooted in preventing such problems with the program.

212. We therefore propose several options for streamlining the administration of the E-rate program while preserving critical safeguards. These options include: moving to electronic filing of all FCC forms and correspondence with USAC; increasing transparency throughout the application process; speeding review of applications and issuance of commitment decisions; simplifying the eligible services list

(ESL) to focus on the service provided rather than the regulatory classification of the service; recovery considerations when seeking reimbursement of previously disbursed E-rate funding; more effective disbursement of unused funds; improve invoicing and disbursement; and streamlining the E-rate appeals review process. We seek comment on our proposals below and any other ways in which we can further streamline the administrative processes, including the program integrity assurance (PIA) review process and the commitment and disbursement processes, to maximize the efficiency of the E-rate program.

A. Electronic Filing of FCC Forms and Correspondence

213. To enable USAC to manage applications more quickly and efficiently, we first propose to require all E-rate applicants and service providers to file all documents, including the FCC Form 500, with USAC electronically and to require USAC to make all notifications electronically. We seek comment on this proposal.

214. While many applicants file a majority of the forms online, many other E-rate program procedures, such as service provider identification number (SPIN) changes, invoice and service delivery deadline extension requests, as well as the FCC Form 500, require paper submissions, some of which must be filled out by hand. When the E-rate program began, some schools and libraries did not have Internet access, thus many applicants did not have the resources to file electronically. Today, however, the vast majority of schools and libraries have Internet access, and—just as we now require E-rate service providers receiving disbursements to use electronic payment systems—we propose to require electronic filing and notification of the receipt of E-rate forms. As the Commission previously concluded, the electronic submission of the FCC forms will improve the efficiency of submitting and processing applications, thereby resulting in faster commitments and disbursements of E-rate funding as well as the return of any unused funds to USAC. It will also reduce USAC's administrative costs because USAC will not have to manually enter data into its electronic system from paper submissions. Additionally, electronic completion, submission, and notification will likely result in fewer errors on the forms and other communication with USAC and to applicants. In proposing to make all forms and correspondence filed with and received by USAC electronic, we

recognize that there may be rare instances in which some applicants may still need to file and receive paper forms due to unreliable Internet access or emergency situations. We therefore seek comment on whether we should impose a minimal fee for applicants who seek to file their forms and correspondence in paper form.

215. SECA suggests that all of an applicant's forms and correspondence with USAC should be available from a centralized portal so the applicant can retrieve current and prior years' information to use as a starting point for new form submissions. SECA states that online functionality will conserve on data entry and problem resolution resources that USAC currently must utilize as well as customer service bureau inquiries. Facilitating access to previous applications will also make it easier for applicants to file forms that are similar to those of previous years and eliminate the duplicative requests for information during PIA review since all the requested information would be available online and available for review. We seek comment on SECA's proposal and any alternative ways to simplify the submission and receipt of FCC forms and other correspondence to USAC. Another way to increase E-rate program efficiencies is automate more of the processes for the program. In addition to requiring online filing, we seek comment on whether there are administrative processes in the program that could be automated and would also result in cost savings and efficiencies. What could be gained by increasing the amount of automated processes at USAC and how could this be best achieved? For example, would increased automation in the application process result in quicker commitment decisions? What aspects of this process lend themselves to automation? What are the ways that increased automation can lead to efficiencies and cost savings? What are the ways automation could reduce or eliminate improper payments? Commenters should be as specific as possible in their proposals.

216. Requiring all forms and correspondence to be available electronically may require USAC to upgrade its internal technology systems in order to accommodate additional electronic submissions and increased automation which could result in initial increased expenditures for the E-rate program. We seek comment on whether the administrative and economic benefits that would result from these changes outweigh any initial upfront costs that would be required for the technological upgrades proposed herein. We note that USAC has already sought

public comment on measures to update its internal informal technology systems to improve operational efficiencies and enhance the customer experience. We therefore direct USAC to incorporate into its consideration this proposal as it adopts measures to improve operational efficiencies.

217. Other than time and resource efficiencies gained for both applicants and USAC, we estimate that several of these proposals will result in actual cost savings for the E-rate program. While it is difficult to quantify the aggregate total savings to the E-rate program as result of these proposals, according to USAC's annual report for 2012, USAC spent approximately \$70 million on E-rate program operating expenses in 2012. Any reduction in these costs as a result of changes such as electronic filing and increased automation of program processes would result in increased funding availability for applicants, especially when considered in combination with the other changes proposed herein such as elimination of funding for certain services.

B. Increasing the Transparency of USAC's Processes

218. We seek comment on ways to increase transparency throughout the application, commitment and disbursement processes, so that applicants have a better understanding of the status of their funding requests. SECA suggests, among other things, that the longer a decision is pending, the more status update information should be made available on USAC's Web site to the affected parties. SECA therefore proposes that USAC should provide additional levels of detail in its "Application Status" tool on its Web site to provide applicants with a better understanding of where their application is in the review process. For example, SECA suggests additional designations, such as "Normal Review," "Selective Review," "Policy Review," "Investigative Review," and "Pending Program Decision on Available Internal Connection Funding." Additionally, in cases where USAC is waiting for an applicant submission, it could indicate as part of the application status that it is "awaiting applicant's response to USAC's request on [date]." We seek comment on SECA's proposal and other ways in which to increase transparency of the review process for applicants.

C. Speeding Review of Applications, Commitment Decisions, and Funding Disbursement

219. We next seek comment on ways to reduce the time it takes USAC to review applications for E-rate support in

order to more quickly release funding commitment decisions. Currently, applications can undergo a number of levels of review prior to release of funding commitment decisions. We note that, in a recent report, GAO recommended that the Commission undertake a risk assessment of the E-rate program. GAO noted that a risk assessment involving a critical examination of the program could help determine whether modifications to USAC's business practices and internal control structure are needed to appropriately address the risks identified and better align program resources to risks. In addition, applicants have found that USAC's review process can become time-consuming and can significantly delay funding commitment decisions, particularly for state networks and consortia that may file numerous funding requests per funding year. At the same time, the Commission has directed USAC to ensure that funding is disbursed to eligible recipients for eligible services. For all the suggestions below, given that we must balance administrative efficiency with protecting against waste, fraud, and abuse, we also seek comment on how we should ensure that streamlining the application and disbursement process does not then result in an increase in improper payments.

220. We seek comment on whether we should establish deadlines for USAC to issue funding decisions or complete its other processing tasks. We describe above the reporting requirements in which USAC must detail performance related to commitments, disbursements, and appeals. If commenters support deadlines, what should those deadlines be? If so, how should we balance speeding the review with protecting against improper payments and waste, fraud and abuse? Commenters should specifically address how the deadlines might improve or harm the application and invoicing processes. What should happen if USAC cannot meet the established deadlines?

221. In addition, we seek comment on ways to expedite the application review process. Are there ways in which USAC can streamline the PIA review process so that applicants are not asked duplicative questions or asked for the same documentation for different applications or funding requests where previous responses or documentation are applicable? Commenters should provide specific examples of the problems they encounter during the application review process, including identifying specific duplicative requests made in the routine review process.

222. Additionally, at times, an entire application or groups of applications involving funding requests for different service providers may be held up pending resolution of one FRN for one provider. Are there changes that should be put in place so that other unrelated funding requests are not held up pending the resolution of an issue involving another FRN? SECA proposes that, absent an active criminal investigation in which the party is the subject, within 90 days of the lack of activity on an FCC Form 471 application or invoice, USAC should notify all affected parties of concerns that are holding up a decision on the application and submit detailed requests for any additional documentation or information as part of the notification. Upon receipt of the requested information, SECA proposes that USAC should issue a decision within 90 days. We seek comment on this proposal and any other proposals setting timeframes for resolution of applications and release of funding commitments. If we were to adopt a deadline by which USAC must act, under what circumstances should we permit USAC to exceed the deadline in order to give full consideration to the application?

223. Further, for USAC to more quickly release funding commitment decisions, should we limit the number of opportunities applicants are given to respond to USAC's requests for documents and clarification? As part of its review, USAC routinely gives applicants additional time to provide missing or incomplete information to USAC during PIA review. When applicants' timely request an extension of time to submit documentation, USAC grants such extensions and gives applicants additional time to respond to their requests for information. The Commission has granted waivers of the E-rate rules providing applicants with additional time to submit documentation to USAC. These extensions of time also delay USAC's application review process and ultimately hinder the prompt release of funding commitment decisions. We thus seek comment on whether to limit the number of opportunities and length of time that applicants have to submit complete information to USAC in response to USAC's requests. Commenters should specifically indicate any potential problems that may arise if we reduce the window of opportunity and any concerns with modifying USAC's outreach to gain complete information to complete their review of pending FCC Form 471 applications.

224. Are there current cost-allocation challenges that impose undue burdens on applicants and on USAC that could be removed? For example, some states do not include preschool within their definition of elementary schools. In such states, preschool classrooms are therefore currently not eligible to receive support for E-rate services, even when those preschool classrooms are located within an elementary school building that otherwise receives E-rate supported services. As a result, in such states, applicants must cost-allocate the expenses for providing E-rate supported services to preschool classrooms, and exclude those expenses from requests for E-rate support. Consistent with the Commission's allowance for the community use of E-rate services, would an exception for these classrooms improve the efficient use of E-rate eligible services and reduce the administrative burden? Are those costs typically so small that the burden of cost allocation and administrative review outweigh the benefit to the Fund of requiring cost-allocation? Commenters should be specific in their proposals.

225. *Multi-year contracts.* E-rate applicants are permitted to enter into multi-year contracts, but applicants with multi-year contracts must file an FCC Form 471 application and go through the same review process every year. Our rules prohibit USAC from issuing multi-year funding commitments in the E-rate program. Stakeholders have argued that it is a waste of an applicant's time to file an application for the same services year after year, and that it is a waste of USAC's time to review the same applications year after year.

226. We agree with stakeholders that multi-year contracts have the potential to drive down service costs, provide more certainty, and that we should minimize duplicative application review by USAC. At the same time, given the dynamic marketplace for many E-rate supported services, it is important that E-rate applicants not bind themselves to multi-year contracts that require applicants to pay prices that are higher than they would receive had they re-sought competitive bids. In balancing those issues, we seek comment on a number of changes to our handling of multi-year contracts.

227. First, we propose that, absent a change in the contract, service provider or recipients of service, we allow E-rate applicants with multi-year contracts that are no more than three years in length (including any voluntary extensions) to file a single FCC Form 471 application for the funding year in

which the contract commences and go through the full review process just one time for each such multi-year contracts. We seek comment on this proposal, and on what additional steps E-rate applicants should have to take in the second and third year of such contracts to confirm their request for E-rate support for the subsequent years. We specifically seek comment on the following proposed rule language:

Multi-year contracts. An eligible school, library or consortium that includes an eligible school or library seeking to receive discounts under this subpart may submit to USAC a single FCC Form 471 covering all the years of a multi-year contract, provided that the term of the contract including extensions, does not exceed three years. An FCC Form 471 covering a multi-year contract must be submitted to USAC before the start of the first funding year covered by the multi-year contract.

228. Second, we seek comment on amending our rules to permit multi-year commitments in the E-rate program. In the *Healthcare Connect Fund Order*, we allowed applicants to request a funding commitment for a multi-year contract that covers up to three years of funding. Unlike the E-rate program, however, the universal service rural health care program is not currently oversubscribed, so it is more feasible for that program to issue multi-year commitments. Is this difference relevant to our handling of multi-year commitments? Should multi-year funding commitments in E-rate be conditional on the funds being available in subsequent years?

229. Finally we seek comment on whether we should impose any additional or different limits on multi-year contracts. For example, should we limit the maximum term (including voluntary extensions) of multi-year contracts that E-rate applicants may enter into for E-rate supported services to three years? What are the typical terms for multi-year contracts now? What are the typical terms for comparable enterprise services in broader business broadband markets?

230. Should the maximum term of a contract for E-rate supported services depend on the type of service at issue? For example, the efficient term for an IRU in dark fiber may be longer than for Internet access services. Indeed, where significant new fiber builds are involved, long term contracts could be critical to keeping recurring costs low. When fiber is laid for the first time to a school or library, an applicant may be able to seek bids that guarantee low ongoing costs once the initial construction is paid for. If an applicant is prohibited from entering a long term

contract when the fiber is first laid, it may be unable to claim similar efficiencies. We seek comment on this analysis.

231. Should we exempt certain services, such as IRUs for dark fiber, from any limits on multi-year contracts? What are the typical terms for enterprise connectivity contracts in commercial markets? Could applicants eliminate the need for long-term contracts associated with new fiber builds by seeking a non-binding renewal option, at a predetermined rate, in contracts? Do such terms exist in contracts for enterprise connectivity for purchasers other than schools and libraries? Do similar issues generally exist for connections to schools and libraries using technologies other than fiber, such as fixed wireless?

232. Are there other approaches to multi-year contracts we should consider? Should we have a cap on the number of multi-year contracts entered into by applicants in a given funding year or the amount of future funding covered by multi-year commitments? If so, how should we select which applicants seeking multi-year funding commitments receive them?

233. *Additional filing windows.* We seek comment on other ways to streamline the administration of the E-rate program and commit available funds as quickly and efficiently as possible. For instance, assuming priority one funding requests do not exceed the E-rate funding cap, should the Commission create separate filing windows—one for priority one and one for priority two commitments? Under this process, the priority one application filing window could run from January to mid-March and the priority two application filing window could run from mid-April to the beginning of June. After the priority one application filing window closes, the Commission could announce what funds are available after the priority one funding process before applicants file for priority two funding. Under this approach, applicants would not have to expend resources unnecessarily to file for priority two services if there is no funding available. Because USAC does not start reviewing priority two funding requests until much later in the funding year, the later application filing window should not slow down the funding commitment process. If, in reforming the E-rate program, we create more than two funding priorities, should we have a separate application filing window for each set of priorities? We seek comment on the operational challenges to having multiple application filing windows, and whether it would, on balance,

benefit applicants and help achieve the goal of maximizing administrative efficiencies.

D. Simplifying the Eligible Services List

234. We propose to simplify the ESL and the FCC Form 471 application process by adopting a definition of eligible services that provides funding for eligible services regardless of regulatory classification. Specifically, we propose to amend section 54.502 and the ESL to remove the regulatory classifications of telecommunications services and Internet access to allow applicants to seek eligible services from any entity. We seek comment on these proposed rule and ESL changes as explained below.

235. The ESL, which is approved by the Bureau and published by USAC each year, provides guidance to applicants on the eligibility of products and services under the E-rate program. Last year, the Bureau reorganized the priority one section of the ESL to consolidate the list of telecommunications services, telecommunications, and Internet access into a single priority one category. The Bureau recognized that, “when applying for discounts, E-rate applicants are focused on the services they need for their schools and libraries, and may be unfamiliar with the regulatory framework for telecommunications services and Internet access established by Commission rulemakings.” Also, the Bureau noted that many of the services purchased by schools and libraries using E-rate funding can fall into more than one of the regulatory classifications. As an example, one of the commenters in that proceeding asserted that many applicants erroneously think that they do not need to request Internet access when they are requesting cellular service with data packages and email access. The Bureau also determined that applicants would no longer be expected to classify their service requests into telecommunications service or Internet services categories when soliciting bids for those services on the FCC Form 470, but that applicants must continue to select the correct category of service on the FCC Form 471 application because this serves statutory and regulatory purposes.

236. In the *Healthcare Connect Fund Order*, the Commission determined that it should support broadband Internet access services and also high-capacity transmission services offered on a common carrier and a non-common carrier basis to allow health care providers to choose from a wide-range of connectivity solutions using any

technology from any provider. Building off this decision, we seek comment on eliminating the regulatory categories with respect to E-rate supported services. Instead, we propose only that an applicant indicate on the FCC Form 470 the requested service priority level as well as provide enough detail for service providers to identify the requested services and formulate bids on the FCC Form 470. The FCC Form 471 application would also require the service priority level (e.g., priority one or priority two) and the Item 21 attachment would continue to be used by applicants to describe the services for which they seek discounts for each funding request. We seek comment on these changes to the E-rate forms.

237. After the ESL was revised for funding year 2013, the Bureau continued to require applicants to select the correct category of service on the FCC Form 471 application. One of the reasons for retaining this requirement is because USAC uses the service category selections to determine which applicants have sought Internet access and/or internal connections and this need to comply with CIPA. We seek comment on an alternative way for USAC to determine which applicants are required to be CIPA-compliant. For example, should we add a checkbox to the FCC Form 471 with a certification that the applicant is seeking discounts for Internet access and/or internal connections and is subject to CIPA requirements? If so, should we also add the actual CIPA certification to this checkbox allowing the applicant to certify its compliance with CIPA? This would allow us to remove the CIPA certification from the FCC Forms 479 and 486 so that applicants would not have to certify to CIPA on multiple forms. In its June 2013 White Paper, SECA suggests that applicants be given the option of providing the information currently required on the FCC Form 486 on the Form 471. Although, SECA also suggests that applicants who prefer to continue filing the FCC Form 486, be given that option as well and a checkbox to designate this preference can be included on the FCC Form 471. We seek comment on both of these possible approaches. Would either approach streamline the application, commitment and disbursement process for applicants? Would moving the CIPA certification work for all applicants including consortia?

E. Funding Recovery Considerations

238. The Commission adopted the *Commitment Adjustment Implementation Order* on September 21, 2000, which, consistent with the Debt

Collection Improvement Act (DCIA), set up a framework for recovering funds committed or disbursed in violation of the Act and our rules. USAC implemented a process for recovering funds disbursed in violation of statutory and rule violations and, in 2004, as part of the *Schools and Libraries Fifth Report and Order*, 69 FR 55097, September 13, 2004, the Commission largely affirmed and further refined USAC's approach when determining what amounts should be recovered by USAC and the Commission when funds have been disbursed in violation of the Commission's E-rate program rules. The Commission concluded that there are circumstances that warrant full recovery of disbursed funds. For instance, the Commission found that full recovery is appropriate when the applicant failed to comply with the Commission's competitive bidding requirements. The Commission also found that a lack of necessary resources to use the supported services warrants full recovery of funds disbursed for all relevant funding requests. The Commission recognized, however, that recovery may not be appropriate for violation of some procedural rules implemented to enhance operation of the E-rate program. At the same time, the Commission must comply with federal obligations to recover funding that has been improperly disbursed.

239. We recognize the importance of preventing and ferreting out waste, fraud and abuse in the E-rate program and believe that strong rules requiring applicants to reimburse USAC if they are found to have violated a statutory obligation are a powerful deterrent to waste, fraud and abuse. At the same time, as our rules have expanded, the risk to applicants of having USAC or the Commission seek full reimbursement of previously disbursed funds based on a rule or program violation has also grown, and sometimes full reimbursement is not commensurate with the violation incurred. We therefore seek comment on whether there are certain program violations that warrant reduced recovery or some other punitive measure short of recovery. For example, would reduced recovery be warranted where an applicant delayed installation of equipment due to human resource limitations or where an applicant did not conduct a broadband assessment at the beginning of the full funding year? Are the Commission's findings that competitive bidding or necessary resources violations require full recovery still appropriate or should we reconsider those findings? Are there appropriate punitive measures we could

implement that more closely tie to the improper behavior? We ask that commenters provide specific scenarios under which they think reduced penalties would be warranted, the rationale supporting reduced recovery under such scenarios, and commenters' suggestions for how the amount of recovery should be recovered. We specifically seek comments identifying a bright line approach to determining recovery amounts for rule violations, creating a system of recovery that is fair, predictable, transparent and administratively efficient. Furthermore, we seek comment on how the Commission could comply with its legal requirements under such a process.

F. Effective Disbursement of Unused Funding

240. We also propose to improve the administrative efficiency of the E-rate program by reducing the amount of unused E-rate funding each year. As discussed above, the demand for E-rate supported services far exceeds available funds. Since the start of the program, USAC annually issued funding commitment letters covering funding requests up to the amount of available funds. However, because applicants do not spend all of the funds for which they receive commitments, a substantial amount of funds remain unused each funding year.

241. The Commission's approach to the problem has changed over time. From 1997 to 2003, each year USAC committed up to the \$2.25 billion E-rate program cap. This resulted in a large unused balance over time, and actual program disbursements well below \$2.25 billion. Starting in 2003, the Commission allowed USAC to identify unused funds from previous years and issue funding commitment letters in excess of the annual cap supported by those unused funds. This change has allowed the program to increase the dollar amount of commitments each year and, as result, bring actual disbursements more in line with the E-rate cap. However, there remain many funding commitments each year for which the applicants do not purchase all or some of the requested services and consequently a large amount of funding gets carried over on the USF's balance sheet year-to-year.

242. We seek comment on whether there are changes we could make to the program to reduce the amount of unused funds. For example, should we direct USAC to identify applicants that consistently seek and receive funding commitments that substantially exceed the amount of disbursements that USAC ultimately issues and work with those

applicants to make their funding requests more accurate? Should there be consequences for applicants who repeatedly seek funding commitments that substantially exceed the amount of E-rate support they receive? If so, how would we determine what constitutes commitments that substantially exceed disbursements and what should the consequences be? Is there a risk that such consequences could encourage inefficient or wasteful spending by a school to avoid those consequences, and, if so, how do we reduce or eliminate that risk? In addition, the Commission allows applicants an additional year to implement non-recurring services if a funding commitment decision is not issued until after March 1 of the funding year. We seek comment on whether the delay in the issuance of funding commitments may contribute to the amount of unused funds. If so, commenters should propose specific ways to adjust the process to eliminate or reduce this issue.

243. We also seek comment on ways to reduce the gap in time between when an applicant knows that it will not use all or some of the funds for which it has received a commitment and when USAC is able to consider those funds rollover funds that can be used the following year. Currently, E-rate participants are advised to check with USAC whether any funds remain on a funding commitment after USAC has paid the associated invoices. Applicants are then asked to submit an FCC Form 500 in order to reduce the committed amount on the FRN to the exact amount actually used. By reducing its commitment to reflect the actual amount used, USAC will know that these funds can be used in the following funding year. Otherwise, any unused funding as part of the funding commitment remains outstanding and is unavailable to use in a following funding year. Should there be a deadline during or immediately following the funding year or invoice period for applicants to notify USAC whether they will use the full amount of their funding commitments and if not, how much will be available for future funding commitments? Are there incentives we can offer to applicants to encourage them to comply with the deadline? For example, should we direct USAC not to process invoices related to an applicant's funding requests if, within three months after the close of the funding year, the applicant has failed to notify USAC whether it has or does not have unused funds from the preceding funding year? Should we direct USAC to de-obligate

funding six months after the invoicing deadline? Should we consider some other period of time? Should USAC then send notices to the applicants and service providers indicating that those funds have been de-obligated?

244. Are there other measures we could implement to more quickly identify unused E-rate funds? For example, should we require applicants to review expenditures halfway through the year to determine if part of the commitment will go unused and should be returned to USAC rather than allowing applicants to wait until after all invoices have been paid? Should we limit the number of invoicing and service delivery extensions? Are there other steps we can take to encourage or require E-rate applicants to identify funding for which they have received funding commitment letters, but will not use? More broadly, are the other steps we can take to reduce the amount of funding that is rolled-over from year-to-year and/or minimize the time between when funds are collected and when they are disbursed?

G. Invoicing and Disbursement Process

245. In order to maximize administrative efficiency, we now propose changes to improve the E-rate disbursement process. In particular, we propose to modify our process to permit schools and libraries to receive disbursements directly from USAC and to adopt specific invoice deadline and invoice deadline extension rules.

246. Currently, schools and libraries may choose either of two methods of seeking reimbursement for E-rate supported services. An applicant may pay its service provider the full cost of the E-rate supported services and then submit to USAC an FCC Form 472, Billed Entity Application for Reimbursement (BEAR) Form. In the alternative, the applicant may pay the service provider only the applicant's portion of the E-rate supported services and then the service provider must file an FCC Form 474, Service Provider Invoice Form (SPI form), with USAC to receive reimbursement. Regardless of which method the applicant chooses, USAC remits the E-rate support payments to the service provider. If the applicant is using the BEAR method, the service provider reimburses the applicant, thus requiring coordination between the applicant and service provider in order for the applicant to receive payment.

247. The Commission established the current reimbursement system in the *Universal Service First Report and Order*, concluding that service providers, rather than schools and

libraries, should seek compensation from USAC for "administrative ease." We seek comment on adopting a revised disbursement process that allows applicants, paying the full cost of the services under the BEAR process, to receive direct reimbursement from USAC. Under this proposal, the service provider would no longer serve as the pass-through for the reimbursement of funds where an applicant has paid the service provider in full for the services. Where an applicant, however, pays only the reduced cost of the services directly to the service provider, then the service provider will continue to file a SPI form with USAC to receive reimbursement. We seek comment on whether making direct payments to applicants under the BEAR process would simplify the E-rate disbursement process for applicants and service providers by removing a step in the process. One of the E-rate program goals proposed above is to streamline the administration of the program. We seek comment on whether this change would improve the efficiency of the program by minimizing unnecessary delays in the disbursement process due to an applicant's request to review bills before the service provider(s) submits the bills to USAC for payment. We also seek comment on whether there would be other consequences to applicants, service providers and the program from making such changes to our rules. For example, if we move the CIPA certifications to another form, would applicants using the BEAR process and seeking reimbursement directly need to submit an FCC Form 486?

248. We next seek comment on whether the Communications Act creates any barriers to the payment of universal service funds directly to E-rate applicants. We note that section 254 of the Act gives the Commission broad discretion in designing the E-rate program, and that section 254(h)(1)(B) requires that a carrier serving a school or library either apply the amount of the E-rate discount as an offset to its universal service contribution obligations or shall be reimbursed for that amount utilizing universal service support mechanisms. One possible interpretation of that provision is that a carrier must receive any universal service support for discounted services it provides to schools or libraries. On the other hand, the *Universal Service First Report and Order* suggested that schools and libraries could directly receive universal service support, although it declined to adopt such an approach for policy reasons. In addition, the Fifth Circuit upheld the Commission's authority under sections

4(i) and 254(h)(2)(A) of the Act to provide support outside the express framework of section 254(h)(1)(B). We seek comment on the possible interpretations of section 254 in this regard. If the only requirement in the Act regarding reimbursement is that the service provider be made whole, we believe modifying the current BEAR process, to allow USAC to reimburse the applicant directly would provide sufficient documentation to demonstrate that the applicant has fully paid for the requested services and is entitled to direct reimbursement from USAC. As it currently exists, the BEAR process satisfies that provision of the Act because the BEAR form requires the applicant to certify that it has made full payment to the service provider. Moreover, the service provider currently signs the BEAR form to indicate that all obligations have been met. We invite comment on these views.

249. We next ask whether there are additional improvements that could be made to the invoicing process or certifications that are required on the invoicing forms, FCC Form 472 and FCC Form 474. Currently, service providers must make a certification each time it files an FCC Form 472, resulting in some large service providers having to submit thousands of certifications each year. We seek comment on whether the FCC Form 473, the Service Provider Annual Certification Form, should incorporate Block 4 of the FCC Form 472 BEAR form to include the current service provider acknowledgement certifications in Block 4 of the current FCC Form 472, or if there are other approaches that would improve the administrative process while still adequately protecting against waste, fraud, and abuse. Are there other certifications or components of the invoicing forms that should be revised in order to improve administrative efficiency or protect against waste, fraud, and abuse? In its 2010 report, the GAO noted that USAC did not compare actual bills to the invoices before disbursing funding. Should USAC require additional documentation to be filed with the invoices in some instances? Should we require that applicants approve a service provider invoice prior to reimbursement?

250. We also seek comment on whether we should codify the invoice deadlines and deadlines for requests for an extension of the invoice deadline. Although the deadline for filing the FCC Form 472 and the FCC Form 474 has been the same, the actual day of the deadline has varied. Specifically, since the 2003–2004 funding year, the relevant invoice forms must be

postmarked or received by USAC no later than 120 days after the date of the FCC Form 486 NL or 120 days after the last day to receive service, whichever is later. A grant of a request for an extension of the filing deadline provides an applicant with an additional 120 days to submit the relevant invoice forms. In the *Schools and Libraries Third Report and Order*, the Commission sought comment as to whether the Commission should codify rules establishing deadlines for service providers to file invoices with USAC and whether USAC's existing policy to deny support for untimely filed invoices, except in limited circumstances, should be codified.

251. We now seek to refresh the record and seek comment on whether to revise our rules to automatically grant, upon request by the applicant, a one-time 120-day extension of the filing deadline for both recurring and non-recurring services to allow applicants the additional time to submit the invoice form. Applicants who receive this one-time 120-day extension would be required to show good cause for additional extensions to limit the amount of time taken for application processing. Should we also direct USAC to inform applicants promptly in writing if an invoice form is not received by the initial 120-day deadline? Applicants would then have 15 calendar days from the date of receipt of this written notice to file the relevant invoice form and necessary documentation or request a one-time 120-day extension of the invoice deadline. We believe these actions appropriately place responsibility to submit the invoice forms with E-rate participants while ensuring the goals of section 254 are realized. Additionally, adopting rules to establish deadlines for the submission of invoices and requests for an extension of the invoice deadline should help to decrease the processing time for invoices and reduce the number of outstanding unpaid invoices. The 15-day period should be sufficient time to submit any invoice forms that were untimely filed due to technical difficulties or clerical errors. Therefore, we believe this additional opportunity to file the relevant invoice form will improve the efficiency and effectiveness of the Fund. We thus seek comment on this proposal. We note that any rules we adopt on invoicing deadlines should conform to proposals aimed at reducing unused funds. For instance, we also seeking comment in this NPRM on whether USAC should be directed to de-obligate funding six months, or some

other period of time, after the invoicing deadline.

H. Streamlining E-Rate Appeal Process

252. We seek comment on how to further improve and streamline the Commission's E-rate appeal process. During the last three years, the Commission has made a concerted effort to reduce the backlog of E-rate appeals and has issued orders addressing more than 1,200 appeals. However, a backlog remains, including requests that have been pending for years, and we continue to receive many new appeals every month. We recognize that with a program attracting over 46,000 applications each year, appeals are inevitable. At the same time, we recognize that certainty about the outcome of appeals benefits both applicants and the program as a whole, and we therefore invite comment on how to streamline the E-rate appeals process.

253. Currently E-rate applicants that are denied funding and parties from whom USAC seeks return of money for violating E-rate program rules, can seek review of a USAC decision by USAC or by the Commission. If a party seeks Commission review of a USAC decision, the Bureau acting on authority delegated to it by the Commission, usually resolves the appeal. If the Bureau denies a request for review, the review process dictated in the Commission's rules is triggered; the party can seek reconsideration by the Bureau of that decision and then may also seek to have full Commission consider the matter if the Bureau denies the request for reconsideration. If the Commission denies an application for review, under some circumstances the party can seek reconsideration of that decision.

254. One result of the many opportunities to seek further review of USAC and Bureau decisions is a growing number of possible appeals. For every USAC decision, the Commission staff could be required to address the matter on three different occasions. In some cases, this delay benefits the applicants who take the multiple opportunities afforded them by our rules to avoid a negative decision. At the same time, there are sizable costs to the E-rate community when applicants and service providers must sometimes wait long periods of time for their appeals to be fully resolved. During the last several years, the Commission has attempted to streamline the process by issuing more E-rate orders addressing multiple appeals, and by streamlining aspects of the written order. Where appropriate, for example, the order provides a more concise explanation of

the facts. In other orders, the Commission staff truncates the written legal analysis where the determination is clearly consistent with the Commission's precedent.

255. We seek comment on other changes Commission staff can implement to improve the appeals review process. Should Commission staff explore other ways to streamline the orders disposing of the appeals? When the Bureau grants an appeal on delegated authority, should it simply specify that the appeal is granted and not provide any analysis, or does the analysis serve the important function of providing guidance to other E-rate stakeholders? Would the request for review filed by the party provide enough guidance to interested parties? We encourage commenters to suggest creative methods to improve the efficiency of the process while providing parties and other interested stakeholders with meaningful guidance about the decision. Finally, should we consider more comprehensive changes to the appeal process pertaining to E-rate decisions? Should we reduce the number of opportunities E-rate applicants have to contest adverse findings? If so, how could that be done consistent with relevant statutory requirements, and what rule changes would be needed? Could we amend or clarify the E-rate rules to reduce the number and type of USAC decisions that can be appealed? Are there other changes we can make to improve the efficiency of the appeals process?

VI. Other Outstanding Issues

256. We also take this opportunity to seek comment on or refresh the record on a variety of issues that have been raised by stakeholders in recent years, including the applicability of the Children's Internet Protection Act (CIPA) to devices brought into schools and libraries, and to devices provided by schools and libraries for at-home use; changes to the National Lunch Program; additional measures for protecting the program from waste, fraud and abuse; wireless community hotspots; and adoption of E-rate program procedures in the event of a national emergency or natural disaster.

A. The Children's Internet Protection Act

257. Stakeholders have sought clarification on the applicability of CIPA to devices not owned by E-rate recipients but using E-rate supported networks and to off-premises use of devices owned by schools and libraries. We seek input from interested parties about the measures schools and libraries

are taking and need to take to comply with CIPA when they allow third-party devices to connect to their E-rate supported networks. Also in response to stakeholder concerns, we seek comment on what steps schools and libraries are taking and must take to ensure that they are not violating CIPA when they provide employees, students and library patrons with portable, Internet-enabled devices that can be used off-premises.

258. *Covered devices.* We seek comment on what devices are covered by CIPA. Congress mandates that CIPA apply to schools and libraries “having computers with Internet access,” and also requires each such school or library to certify that it is enforcing a policy of Internet safety that includes the operation of a technology protection measure “with respect to any of its computers with Internet access.” We seek comment on whether the language “computers with Internet access,” as used in the context of CIPA, includes all devices used to access the Internet, including all portable devices such as laptops and netbooks with wired Internet access, with Wi-Fi capability, or with wireless data or air cards; cellular phones or “smartphones” capable of accessing the Internet; and Internet-enabled e-readers and tablets. As more and more devices, from routers to refrigerators, are equipped with computing capability, we seek comment on limiting principles we should apply to our treatment of what constitutes a computer with Internet access for CIPA purposes, and how those limiting principles relate to the statutory language and goals of CIPA. For example, should we consider as a limiting principle the language in CIPA that requires the operation of a technology protection measure that provides protection against access to “visual depictions” that are obscene, child pornography, or harmful to minors? Specifically, does the use of “visual depictions” in CIPA mandate that in order to fall within CIPA, the computers with Internet access in question must at least provide a screen, monitor, or other way to view the prohibited material? We also invite commenters to recommend specific changes to our rules that would clarify this issue. For example, should we include a definition of “computers with Internet access” in our CIPA-related rules, and what should that definition be?

259. We also seek comment on whether the phrases “having computers with Internet access” and “with respect to any of its computers with Internet access” and other similar language in the statute means that schools and

libraries are required to comply with CIPA only with regard to those computers that they own or control. Does this interpretation fulfill the intended purpose of CIPA? We also seek comment on whether we should amend our CIPA-related rules to reflect this reading of the statute, and if so how should we amend them. In the alternative, we seek comment on whether CIPA should be interpreted more broadly to be focused on protecting children from harmful online content on any device, and therefore require CIPA compliance with respect to any computer that is accessing the Internet using E-rate supported Internet access or internal connections, regardless of the ownership or control of the device used to access such content.

260. *Off-Campus Use.* We seek comment on whether CIPA requirements extend to school or library computers taken off-campus and used with outside networks that are not supported by E-rate. If we find that CIPA requirements do not apply to computers with Internet access when used with networks that are not supported with E-rate funds, how should we address instances where school or library computers are used to access the Internet using a service that is supported for on-campus use, but not for off-campus use? For example, if a student uses a tablet with an Internet access data plan, the school could seek E-rate support for the portion of the cost of the data plan used on-campus, but not for the portion used off-campus. Should the CIPA requirements only apply when the computer is used on campus, because the school is not seeking E-rate support for the off-campus portion of the cost of the data plan? We also seek comment on whether our existing CIPA-related rules need to be amended to cover these off-campus use situations. We request that commenters be as specific as possible when recommending amendments to our rules.

B. Identifying Rural Schools and Libraries

261. We propose to modernize our definition of “rural area” to make it more relevant and useable for schools and libraries seeking to get the benefit of the additional discounts for rural schools and libraries. In 1997, the Commission adopted for the E-rate program the definition of “rural area” used by the U.S. Department of Health and Human Service’s Office of Rural Health Care Policy (ORHP). Under ORHP’s definition, an area is rural if it is not located in a county within a Metropolitan Statistical Area (MSA) as

defined by OMB, or if it is specifically identified as “rural” in the Goldsmith Modification to Census data.

262. The Commission explained in the 2003 *Schools and Libraries Third Report and Order* and again in the *E-rate Broadband NPRM* and the that a new definition was necessary because the U.S. Department of Health and Human Service’s Office of Rural Health Care Policy (ORHP) no longer uses the definition adopted by the Commission and therefore has not updated the Goldsmith Modification to the 2000 Census data. In the *E-rate Broadband NPRM*, we proposed that any school or library that is within a territory that is classified as “town-distant,” “town-remote,” “rural-distant,” or “rural-remote” by the U.S. Department of Education’s National Center for Education Statistics (NCES) urban-centric locale code be considered rural for purposes of calculating its E-rate discount level. We seek to refresh the record on that proposal. The NCES codes could be a reliable indicator of rural areas for the E-rate, because the Department of Education’s definition is specifically targeted to schools, pinpoint more precisely whether a school is located in a rural area, and is readily available through the Department of Education’s Web site which has the coding system broken down by state. Therefore we seek comment on changing our rules to read as follows:

§ 54.505 Discounts.

(a) * * *

(b) * * *

(1) * * *

(2) * * *

(3) The Administrator shall classify schools and libraries as “urban” or “rural” based on location in an urban or rural area, according to the following designations.

(i) Schools and libraries whose locale code is city, suburb, town-fringe, or rural-fringe, as measured by the U.S. Department of Education’s National Center for Education Statistics, shall be designated as urban.

(ii) Schools and libraries whose locale code is town-distant, town-remote, rural-distant, or rural-remote, as measured by the U.S. Department of Education’s National Center for Education Statistics, shall be designated as rural.

263. Because NCES codes are not assigned immediately, it is possible that not every school that is part of an E-rate application will have a code or classification. If we adopt the proposed rule above, how should we handle such schools?

264. An alternative to relying on NCEC codes would be to use census data. The census classifies areas into three groups: urbanized areas, urban clusters, and rural areas. Urbanized areas “consist[] of densely settled territory that contains 50,000 or more people,” urban clusters “consist[] of densely settled territory that contains at least 2,500 people, but fewer than 50,000 people,” and rural areas include all areas that are not urbanized areas nor urban clusters. As of the 2010 Census, 220 million Americans lived in urbanized areas, 29 million lived in urban clusters, and 59 million lived in rural areas. How could we use census data to classify a school for purposes of E-rate? Should it be based solely on the location of the school, and if so, should the “rural” designation only apply to schools located in rural areas or also those in urban clusters? Should it be based on where its students live, so that if a majority of student live in a rural area, the school should be designated “rural” for E-rate even if it’s located in an urban cluster? How should the classification account for the fact that schools are often located in small towns, which may be considered urban clusters, even though the costs of providing to the service to the school are significantly higher than the costs in urbanized areas (such as cities and their suburbs)? We seek comment on relying on census data for purposes of the rural-urban classification, and on changing our rules to read as follows:

§ 54.505 Discounts.

- (a) * * *
- (b) * * *
- (1) * * *
- (2) * * *

(3) The Administrator shall designate a school or library as “urban” if and only if the school or library is located in an urbanized area as determined by the most recent rural-urban classification by the Bureau of the Census; the Administrator shall designate all other schools and libraries as “rural”.

265. In 2010, the American Library Association (ALA) pointed out that libraries do not have urban-centric locale codes. We therefore seek comment on how libraries should determine whether they are considered urban or rural. How can we ensure libraries serving rural areas receive sufficient support? Should libraries use the locale-code of the school closest to each library? If we adopt our proposal below to adopt district-wide discount criteria should a library use the urban-centric code of the school district in which it is located? Are there any

library systems that have facilities in multiple school districts? If so, we seek comment on how to account for such library systems. We also invite commenters to suggest alternate definitions of rural for use in the E-rate program, and we ask that commenters who offer other definitions explain the benefits and drawbacks of their proposals as compared to our proposal.

266. Finally, we seek comment on how existing E-rate schools and libraries that that receive support would be impacted by changes to the rural definition. Should we phase in changes to the rural definition over time to help schools and libraries that are reclassified as non-rural to adjust?

C. Addressing Changes to the National School Lunch Program

267. As we consider changes to the structure of the E-rate program, we also take this opportunity to address changes in the National School Lunch Program (NSLP) that necessitate some adjustments to how we determine what discounts some schools and libraries can receive. Traditionally, schools that participate in the NSLP collect individual eligibility applications from each of their students seeking free or reduced-priced lunches. Under the E-rate program, most schools and school districts use the NSLP eligibility as a proxy for poverty when calculating discounts on services received under the E-rate program. In the alternative, schools and school districts can use a federally-approved alternative mechanism, such as a survey. Libraries’ discount percentages are based on the public school district in which they are physically located.

268. In 2011, as mandated by the Healthy, Hunger-Free Kids Act of 2010, the United States Department of Agriculture (USDA) began rolling out a new reimbursement mechanism called the Community Eligibility Option (CEO), allowing schools to elect to serve free breakfasts and lunches to all the students attending a school without collecting household applications from any of the students at the school. Schools that elect to participate in the CEO must: (1) have 40 percent or more of their students directly certified as eligible (“Identified Students”) for free meals (for example, on the basis of their participation in the Supplemental Nutrition Assistance Program (SNAP), Temporary Assistance for Needy Families, or Food Distribution Program on Indian Reservations) in the year prior to implementing the option; (2) agree to serve free lunches and breakfasts to all students for four successive school years; and (3) agree to cover with non-

federal funds any costs of providing free meals to all students above amounts provided in federal assistance. To compensate for the students who would qualify for free or reduced price meals, but who do not participate in a program which allows them to be directly certified as school lunch-eligible, schools in the CEO program apply a standard multiplier of 1.6 to their Identified Students population in order to determine the total percentage of meals for which they will be reimbursed by the USDA. Schools are then responsible for the difference between the federal reimbursement rate and the total cost of meals for all students.

269. Because schools that participate in the CEO no longer collect individual eligibility data from participating students, it could affect student eligibility for free school meals. If the E-rate program were to use the same eligibility criteria as the CEO program to determine E-rate discounts against the current discount matrix, it could potentially increase the number of schools eligible for 80 percent discounts and higher on the E-rate discount matrix.

270. In 2011, the Bureau directed USAC to allow schools participating in the CEO program to use their NSLP eligibility data for the most recent E-rate funding year in which such schools did not participate in the CEO to determine their E-rate discounts. In 2012, the Bureau repeated this guidance.

271. We now seek to gather data that will inform our ability to assess the extent and impact of challenges related to the CEO and the E-rate program. In particular, we seek comment on six over-arching issues. First, we seek comment on how we should calculate student eligibility for schools and school districts electing the CEO as opposed to those schools and school districts not electing the CEO. If we adopt two separate tracks—CEO schools and school districts and non-CEO schools and school districts—should CEO schools be permitted to qualify under either track, or should they be limited to the CEO track? Commenters should address the practical implications of adopting two separate tracks. Should any adopted methodology for determining discount rates attempt to preserve an applicant’s average discount rate under the current E-rate program or the current overall distribution of discount rates among the applicants?

272. Second, we seek comment on whether we should consider alternative ways to measure the poverty level for eligible schools and libraries that is minimally burdensome for schools and

provides an accurate measure of poverty. For example, should the Commission reconsider using U.S. Census Bureau data, such as the American Community Survey (ACS), an annual socioeconomic survey of households, to determine reimbursement levels? The ACS is designed to produce relatively precise estimates throughout the nation for small geographic areas, such as school districts, by surveying large samples of households and accumulating data over periods of 1, 3, and 5 years, depending on an area's population. If we were to use U.S. Census data to set subsidy levels, how would we ensure that such data accurately measures a school's level of need rather than general community income? And how could we ensure that such data is sufficiently current? Are there any issues regarding the definition of Tribal lands and the collection of data on Tribal lands in the ACS of which we should be aware? As more states opt for the CEO, is there a common way in which to measure the poverty level for schools that the USDA, the U.S. Department of Education and the Commission could all use for CEO schools in implementing their programs based on poverty levels? Are there other ways to accurately measure poverty among schools that are familiar to most schools that we should consider? Specifically, in regard to libraries, is there an alternative method that may more accurately reflect the level of poverty in a library's service area? Commenters should indicate whether any proposed alternatives are accessible to all schools and how difficult, costly, and burdensome such alternatives may be to administer among schools.

273. Third, we seek comment on whether we should require schools and school districts to use a federally-approved alternative mechanism, such as school-wide income survey, to determine their level of poverty. Currently, for CEO schools to maintain current free and reduced poverty statistics to determine eligibility for various additional state and federal program benefits that their students may qualify for, they have had to collect Household Information Surveys, which they then process manually following poverty guidelines. Should the Commission require a similar survey or application for purposes of receiving E-rate program benefits? We understand that the requirement of such a survey or form for purposes of the E-rate program may conflict with the objective of the CEO program to eliminate the effort associated with collecting and processing applications. However, does

the benefit of receiving E-rate reimbursements for services outweigh any administrative burdens associated with collecting and processing these forms or surveys, particularly, where schools and school districts have already collected and processed these forms?

274. Currently, if a school uses a school-wide income survey and at least 50 percent of the surveys are returned, the school may calculate the percentage of NSLP-eligible students from the returned surveys and project that percentage of eligibility for the entire school population, for purposes of determining its discount rate under the E-rate program. We take this opportunity to revisit that practice, and seek comment on whether allowing schools to project the percentage of their NSLP-eligible students unreasonably distorts the number of needy students by artificially inflating the E-rate discount rate they are able to claim. Should CEO or other schools that use school-wide surveys be allowed to project the percentage of their NSLP-eligible students based on the surveys they receive as permitted by our current procedures? Would those projections be more accurate if we require schools to receive a higher percentage, such as at least 75 percent of the surveys in order to project their students NSLP-eligibility from the surveys? In the alternative, should all applicants that use school-wide income surveys be required to base their E-rate discount rate only on the surveys they actually collect? Commenters should indicate what other concerns are associated with requiring schools and school districts to collect these poverty statistics for the purposes of the E-rate program.

275. Fourth, we seek comment on whether we should use direct certification data with a multiplier to determine a school's poverty level. Using only the direct certification poverty statistic without a multiplier as the basis for a CEO school's E-rate discount would tend to severely underreport a school's actual poverty statistic, because students at the reduced-price lunch status, along with some free lunch students, would not be included in the counts for determining the E-rate discount rate. Not all families who currently receive free or reduced lunch apply for benefits such as Medicaid, SSI, Section 8 and SNAP and those students would not be included in the direct certification data. While the current multiplier of 1.6 is applied to the direct certification data under the CEO program through school year 2013–2014, USDA's FNS is permitted to change the multiplier to a number

between 1.3 and 1.6 after school year 2013–2014. We thus seek comment on whether we should establish a multiplier between 1.3 and 1.6, consistent with the CEO, or some other multiplier to the direct certification data? For schools and school districts currently participating in the CEO, we seek data on the difference in the poverty level when using NSLP eligibility, direct certification, and direct certification with the 1.6 multiplier currently used by USDA. Commenters should indicate what multiplier they believe is fair and reasonable and will adequately capture schools' poverty levels. Should we develop a different multiplier for priority one and priority two services? Additionally, we seek comment on whether the direct certification data and nationwide multiplier should be used for determining an applicant's discount rate or should we apply this eligibility figure to the current E-rate discount matrix? If so, should we make any adjustments to the current E-rate discount matrix given the advent of the CEO? Commenters should set forth with specificity any alternative proposed discount matrix.

276. Fifth, we seek comment on whether there are scenarios under which we should provide a mechanism for CEO schools to qualify for higher discounts than they would under whatever default approach we adopt. The CEO operates on four-year cycles, but it provides a mechanism whereby schools may demonstrate that their poverty levels have changed, thus making them eligible for additional reimbursement. The current E-rate program requires applicants to demonstrate discount eligibility on an annual basis. If the Commission adopts a mechanism that permits schools to establish their discount level for multiple funding years, as current CEO schools are now able to do, should there be a process by which they may demonstrate that their E-rate discount level has increased? If so, what information should we require from applicants seeking an exception? Should the applicant then be required to establish the discount level annually for successive years in a cycle, or would the new discount level be retained for multiple years? How would this operate if the applicant were a consortium, or a consortium comprised of CEO and non-CEO schools (and potentially libraries)?

277. Lastly, we seek comment on what procedural and administrative issues are impacted by the CEO? For example, USAC annually requests states to provide a spreadsheet listing NSLP data by school that is used for

application review. While many states attempt to comply with these requests, a states' database systems vary by state and may not easily lend themselves to producing reports in USAC's requested format. The introduction of CEO schools potentially compounds the state reporting problem, particularly because CEO states and those that will become CEO states may not yet have determined how, or if, CEO schools will be accounted for within their NSLP-based database. What procedural mechanisms can we establish to minimize the burden upon states, while mitigating any additional administrative burden for USAC in reviewing the data for CEO schools? Additionally, USAC has provided a specific designation to identify those schools providing free meals for all students under the USDA's CEO in Block 4 (Discount Calculation Worksheet) of a school's FCC Form 471 application. Should the Commission revise the FCC Form 471 application or any of the other forms in order to accurately identify a CEO school? Commenters should specifically indicate any proposed changes. Commenters should also indicate what other administrative or procedural barriers or concerns may need to be addressed as part of any proposed alternative. For example, what information or documentation should be required by USAC, as necessary, for state validation of the student eligibility data depending upon the method used? Should we consider a different approach for schools operated by federal or Tribal entities, such as the Bureau of Indian Education or Tribal governments? What should USAC's review processes entail for CEO schools? What, if any, other procedural or administrative issues may need to be addressed if applying the direct certification data with a multiplier to the E-rate program?

278. We also seek to identify best practices by those currently participating in the CEO program, so that we can fully consider possible programmatic changes, including potential rule changes. We are most interested in ways to mitigate the impact of the CEO on the E-rate program regarding discount eligibility, administrative burdens, and E-rate processes as a whole. So that we may have a factual basis and detailed record upon which to determine the nature and extent of any problems, we encourage commenters that currently participate in the CEO and those that will become eligible in the future, to provide us with detailed information regarding their experiences, both positive and negative.

We believe that input from those schools and school districts that currently participate in the CEO and those libraries and library systems affected by the CEO is crucial in fully evaluating the impact of the CEO on the E-rate program. Further, identifying with specificity particular examples or concerns will ensure that we have a complete understanding of the issues involved. In responding to the questions posed above, commenters should address what, if any, additional burden any new reporting or data collections requirements may place on service providers and/or applicants.

D. Additional Measures To Prevent Waste, Fraud and Abuse

279. The Commission is committed to guarding the Fund against waste, fraud, and abuse and ensuring that funds disbursed through the E-Rate program are used for appropriate purposes. During the last 15 years, the Commission has assisted with several dozen criminal prosecutions of individuals who have sought to defraud the E-rate program, entered into compliance plans with individuals, schools and companies that are alleged to have violated the E-rate rules, and suspended or debarred dozens of persons from participating in the E-rate program. We invite commenters to identify and discuss ways that the Commission can continue to combat waste, fraud and abuse in the E-rate program. We seek to identify additional policies and procedures that we can put in place to protect against waste, fraud, and abuse; to identify waste fraud and abuse; and to aggressively pursue actions against those engaged in waste fraud and abuse. We also specifically seek comment on our proposal to extend document retention requirements for participants in the E-rate program from five years to at least ten years to ensure documents are available when needed for investigations and prosecutions involving waste, fraud and abuse in the E-rate program consistent with the time frame for pursuing recovery under the False Claims Act.

1. Extending the E-Rate Document Retention Requirements

280. We propose to extend the E-rate program document retention requirements from five to at least ten years. We seek comments on the benefits and burdens of doing so. Access to relevant documents is crucial to conducting effective audits of E-rate applicants and service providers, and otherwise investigating compliance with the requirements of the E-rate program. Our rules currently require schools and

libraries to retain all documents related to the application, receipt, and delivery of eligible services received under the E-rate program for at least five years after the last day of the delivery of services. Schools and libraries must also retain all other documentation that demonstrates compliance with the statutory or regulatory requirements for the E-rate program as well as all asset and inventory records of equipment purchased as components of supported internal connections services sufficient to verify the actual location of such equipment for a period of five years after purchase. Service providers are also required to retain documents related to the delivery of eligible services for at least five years after the last day of service delivery and all other documentation that demonstrates compliance with the statutory or regulatory requirements for the E-rate program.

281. In the *USF/ICC Transformation Order*, the Commission revised the record retention requirements for recipients of high-cost support to extend the retention period from five years to ten years. In doing so, the Commission determined that the high-cost retention requirement of five years was inadequate for the purposes of litigation under the False Claims Act, which can involve conduct that relates back substantially more than five years. Similarly, in the *Lifeline Reform Order*, 77 FR 12784, March 2, 2012, the Commission proposed to amend its rules to extend the retention period for eligible telecommunications carriers receiving low-income universal service support from three years to at least ten years. Similar concerns lead us to propose to amend § 54.516 of the Commission's rules to read as specified below and we seek comment on this proposed rule:

(a) Record keeping requirements—(1) Schools, libraries and consortia. Schools, libraries, and any consortium that includes schools and libraries shall retain all documents related to the application for, receipt, and delivery of discounted telecommunications and other supported services for at least 10 years after the last day of the delivery of services or from the end of the applicable funding year, whichever is later. Schools, libraries, and any consortium that include schools or libraries shall also retain any other document necessary to demonstrate compliance with the statutory or regulatory requirements for the schools and libraries mechanism. Schools and libraries shall maintain asset and inventory records of equipment purchased as components of supported

internal connections services sufficient to verify the actual location of such equipment for a period of five years after purchase.

(2) *Service providers.* Service providers shall retain documents related to the delivery of discounted telecommunications and other supported services for at least 10 years after the last day of the delivery of services or from the end of the applicable funding year, whichever is later. Service providers shall also retain any other document that demonstrates compliance with the statutory or regulatory requirements for the schools and libraries universal service support mechanism.

282. We also seek comment on whether there are other changes we should make to our document retention requirements. For example, should our rules specify that applicants and service providers must keep records of all their communications relating to bids for and purchases of E-rate supported services? Should we extend the required retention of records in the event of any Governmental investigation, audit, or other governmental inquiry involving a particular participant or applicant for funding in the E-rate program to avoid destruction of potentially relevant documents. We further seek comment on the manner in which such an extension would be implemented. For example, should the obligation for an extended retention period be immediately and automatically triggered by a participant or applicant's knowledge that an investigation of its E-rate funding or E-rate requests is ongoing? If so, should the record retention extension be a blanket extension applying to all existing E-rate documents in its possession or should an extension be implemented only at the discretion of the Commission, upon direction from the Commission or USAC, to the party involved? In other words, should additional retention be required and permitted "as directed by the Commission or USAC" and targeted to those documents determined to be appropriate in the Commission's sole discretion? Would such a targeted "hold" requirement be better than an automatic, blanket hold? We seek comment on these options.

2. Documentation of Competitive Bidding

283. As discussed above, E-rate applicants are currently required to retain documentation that demonstrates compliance with the statutory or regulatory requirements for the E-rate program as well as all asset and inventory records of equipment

purchased as components of supported internal connections services sufficient to verify the actual location of such equipment for a period of five years after purchase. In the *Healthcare Connect Fund Order* the Commission required applicants to the HealthCare Connect Fund to submit to USAC competitive bidding documents, including a copy of each bid received, the bid evaluation criteria, bid sheets, a list of people who evaluated bids, memos, board minutes, or similar documents, and any correspondence with vendors during the bidding, evaluation, and award phase of the process. Having such documents from E-rate recipients would allow USAC to evaluate more fully the competitive bidding process conducted by E-rate applicants and ensure that documentation of the competitive bidding process was retained in the event of an audit. At the same time, providing such documents would impose additional burdens on E-rate applicants and could increase application review time and administrative costs. We therefore seek comment on whether we should similarly require E-rate applicants to submit competitive bidding documents with their FCC Forms 471. Are there specific documents, such as the bid selection sheet, that would allow USAC to review an applicant's competitive bidding process while minimizing the burden on applicants?

3. E-rate FCC Form Certification Requirements

284. As the custodian of the universal service fund, we are committed to ensuring that universal service funds are used in a manner consistent with the E-rate program rules. One way to encourage compliance and to ensure that we hold entities responsible for failing to follow our rules is to require applicants and service providers to certify their compliance with various requirements of the E-rate program when submitting forms to USAC. Certifications of compliance with our rules will help protect against waste, fraud and abuse in the program by imposing a duty on the person submitting the certification to consider whether the applicant or service provider is in compliance with all E-rate rules. Moreover, the certifications are an important enforcement tool in protecting the USF from waste, fraud and abuse.

285. Currently, most E-rate forms submitted to USAC require an "authorized person" to attest to the certifications contained on those forms on behalf of the entity submitting the

form. While a signatory may be "authorized" to sign an E-rate form pursuant to a general delegation by the applicant or service provider, occasionally signatories on the E-rate forms do not have sufficient knowledge about the actual operation of the E-rate program or a sufficient understanding of the Commission's E-rate program rules to provide a meaningful or accurate certification. As a way to further guard against waste, fraud and abuse, we therefore propose to amend our rules to require that an officer of the service provider sign certain forms submitted to USAC in support of an application for eligible services and any requests for payment. We also propose to codify the current certifications contained on our E-rate forms. We further propose to require service providers to certify their compliance with the lowest corresponding price rule and with state and local procurement laws.

a. E-rate FCC Form Signatories

286. First, we seek comment on whether the current signatories on the following E-rate forms and any other E-rate forms are sufficiently knowledgeable about the E-rate program to accurately certify to program compliance. The relevant E-rate forms include:

FCC Form 470 (Description of Services Requested and Certification Form). The FCC Form 470 is used by an applicant to open a competitive bidding process for desired eligible services. It requires an "authorized person" on behalf of the school or library to certify certain information to ensure, among other things, that the applicant will conduct a competitive bidding process in accordance with Commission rules, the applicant has not received anything of value from the service provider other than the requested services, and that only eligible entities receive support under the E-rate program.

FCC Form 471 (Services Ordered and Certification Form). The FCC Form 471 is used by an applicant to request funding from USAC for the services selected by the applicant during its competitive bidding process, and to provide USAC with information about the requested services and the discount(s) for which an applicant is eligible to receive on eligible services under the E-rate program. As with the FCC Form 470, the FCC Form 471 requires an "authorized person" to certify to certain information to ensure, among other things, that only eligible entities will receive support under the E-rate program.

FCC Form 472 (Billed Entity Applicant Reimbursement (BEAR))

Form). The FCC Form 472 is used by an applicant to seek reimbursement from USAC for discounts on services paid in full. This form requires certifications by an "authorized person" on behalf of both the applicant and service provider to ensure that the applicant has paid for the services, that the service provider has provided discounted services within the current funding year for which it submits an invoice to USAC, and that invoices submitted from service providers for the costs of discounted eligible services do not exceed the amount that has been approved.

FCC Form 473 (Service Provider Annual Certification Form). The FCC Form 473 is used to establish that the participating service provider is eligible to participate in the E-rate program and to confirm that the invoices submitted by the service provider are in compliance with the E-rate rules. This form requires certain annual certifications by an "authorized person" on behalf of the service provider to ensure that the service provider is in compliance with the Commission's rules.

FCC Form 474 (Service Provider Invoice (SPI) Form). The FCC Form 474 is used by service providers to seek payment from USAC for the discounted costs of services it provided to applicants for eligible services. The FCC Form 474 is also used to ensure that each service provider has provided discounted services within the current funding year for which it submits an invoice to USAC, and that invoices submitted from service providers for the costs of discounted eligible services do not exceed the amount that has been approved. While this form does not currently require attestation to certifications, we have recently sought renewal of this form and have proposed to include certifications by an "authorized person" on behalf of a service provider.

FCC Form 479 (Certification by Administrative Authority to Billed Entity of Compliance with the Children's Internet Protection Act). The FCC Form 479 is used by the Administrative Authority for one or more schools or libraries, for which universal service discounts have been requested or approved for eligible services, to certify their compliance with CIPA. This form requires an "authorized person" on behalf of the Administrative Authority to certify that an Internet safety policy is being enforced.

FCC Form 486 (Receipt of Service Confirmation Form). The purpose of the FCC Form 486 is to authorize the payment of invoices from service

providers, indicate approval of technology plans, and indicate compliance with CIPA. This form requires an "authorized person" on behalf of the applicant to certify that, for example, the discounted services indicated on the form are covered by the technology plan that has been approved by the state or other authorized body and that the services listed on FCC Form 486 have been, are planned to be, or are being provided to all or some of the eligible entities identified on the FCC Form 471.

FCC Form 500 (Adjustment of Funding Commitment and Modification to Receipt of Service Confirmation Form). The FCC Form 500 is used by the applicant to make adjustments to previously filed forms, such as changing the contract expiration date filed with the FCC Form 471, changing the funding year service start date filed with the FCC Form 486, or cancelling or reducing the amount of funding commitments. This form requires an "authorized person" on behalf of the applicant to certify as to the veracity of the information within the form, the applicability of the discount level, and that any records relied on to complete the form will be retained for five years.

287. We propose to require that an officer of the service provider make the required certifications on the FCC Form 472 (BEAR Form), FCC Form 473 (Service Provider Annual Certification Form) and the FCC Form 474 (SPI Form), the key documents provided by service providers to USAC attesting to the service provider's compliance with the E-rate rules and seeking payment for supported services provided. Requiring an officer to certify compliance will help ensure that the certification reflects the service provider's commitment to understand and comply with the E-rate program rules and requirements.

288. Specifically, in proposing to require officer certification on the FCC Form 472, we seek comment on amending § 54.504(f) to read:

(f) Filing of FCC Form 472. All service providers must submit a Service Provider Acknowledgement as part of the Applicant's FCC Form 472 seeking reimbursement from the Administrator for eligible services. The FCC Form 472 shall be signed by an officer of the service provider and shall include the officer's certifications under oath that:

(1) This service provider will remit the discount amount authorized by the fund administrator to the Billed Entity Applicant who prepared and submitted the Billed Entity Applicant Reimbursement Form as soon as possible after the fund administrator's notification to the service provider of

the amount of the approved discounts on this Billed Entity Applicant Reimbursement Form, but in no event later than 20 business days after receipt of the reimbursement payment from the fund administrator, subject to the restriction set forth in subsection (2) below.

(2) This service provider will remit payment of the approved discount amount to the Billed Entity Applicant prior to tendering or making use of the payment issued by the Universal Service Administrative Company to the service provider of the approved discounts for the Billed Entity Applicant Reimbursement Form.

(3) This service provider is in compliance with the rules and orders governing the schools and libraries universal service support program and that failure to be in compliance and remain in compliance with those rules and orders may result in the denial of discount funding and/or cancellation of funding commitment.

(4) Failure to comply with the rules and orders governing the schools and libraries universal service support program could result in civil or criminal prosecution by law enforcement authorities.

What are the benefits and burdens of requiring an officer signature on the FCC Form 472?

289. Recently, in seeking to renew the information collection requirements associated with the FCC Form 473, we sought comment on amending that form to require an officer of the service provider, rather than just an "authorized person" to make the required attestations on the FCC Form 473. While we received comments in response to our proposal, we do not consider the record robust enough to support changes to the form. However, the issue is important to our efforts at reducing waste and abuse in the program and we therefore renew our request for comments. We thus seek comment on redesignating current § 54.504(f) of our rules as newly added § 54.504(g) and revise paragraph (g) to read:

(g) Filing of FCC Form 473. All service providers eligible to provide telecommunications services and other supported services under this subpart shall submit annually a completed FCC Form 473 to the Administrator. The FCC Form 473 shall be signed by an officer of the service provider and shall include that officer's certifications under oath that:

What are the benefits and burdens of requiring officer certification on the FCC Form 473?

290. Further, in proposing to require officer certification on the FCC Form 474, we seek comment on adding a new provision to our rules at § 54.504(h) that would read:

(h) Filing of FCC Form 474. All service providers seeking reimbursement from the Administrator for eligible services shall submit a completed FCC Form 474 to the Administrator. The FCC Form 474 shall be signed by an officer of the service provider and shall include the officer's certifications under oath that:

(1) This service provider is in compliance with the rules and orders governing the schools and libraries universal service support program and that failure to be in compliance and remain in compliance with those rules and orders may result in the denial of discount funding and/or cancellation of funding commitment.

(2) Failure to comply with the rules and orders governing the schools and libraries universal service support program could result in civil or criminal prosecution by law enforcement authorities.

What are benefits and burdens of requiring officer certification on the FCC Form 474?

291. Similarly, we propose and seek comment on whether we should also require all E-rate forms submitted by E-rate applicants be signed by someone with authority equivalent to that of a corporate officer. For example, we propose amending § 54.503(a)(2) of our rules to read:

(2) The FCC Form 470 shall be signed by the person authorized to order eligible services for the eligible school, library, or consortium including such entities, and with authority equivalent to that of a corporate officer, and shall include that person's certification under oath that:

We also propose amending § 54.504(a)(1) of our rules to read:

(1) The FCC Form 471 shall be signed by person authorized to order eligible services for the eligible school, library, or consortium, and with authority equivalent to that of a corporate officer, and shall include that person's certifications under oath that:

Commenters should provide comments on both the benefits and burdens of requiring an equivalent signature for applicants on the FCC Forms 470, 471, 472, 479, 486, and 500, and any other E-rate forms attested to by the applicant.

292. In the alternative, we seek comment on whether we should require that the certifications on the FCC Forms submitted by applicants, service providers or both be made by an individual with substantial knowledge of E-rate program requirements who is also responsible for ensuring program compliance by the service provider or the applicant. Commenters should provide comments on the benefits and burdens of requiring such a knowledgeable individual to sign the FCC Forms 470, 471, 472, 473, and 474, and any other E-rate forms.

b. Existing Certifications

293. Our rules currently require certain certifications be made as part of the FCC Forms 470, 471, 472, 479, 486, and 500, but we recognize that many of the certifications on the current E-rate forms are not codified in the Commission's rules. For example, the FCC Form 471 requires that a person authorized by the applicant certify that no kickbacks were paid to anyone within the applicant. This certification, however, is not specified in § 54.504(a)(1) of our rules. We thus seek comment on whether we should amend our rules to include all of the certifications currently found on the E-rate FCC Forms. If we do so, should we make the list of certifications non-exclusive and to continue to delegate authority to the Bureau to consider including additional certifications on E-rate forms as necessary and appropriate? We seek comment on that approach.

c. Additional Certifications

294. *Lowest Corresponding Price Certification.* We also propose to amend § 54.511 to require service providers to certify their compliance with the lowest corresponding price rule. The lowest corresponding price rule requires service providers to provide applicants with prices no higher than the lowest price that it charges to similarly-situated non-residential customer for similar services. Requiring such a certification will provide additional incentive for service providers to offer schools and libraries with competitive prices for supported E-rate services and hold service providers further accountable for complying with this rule. We seek comments on the benefits and burdens of such a requirement. Specifically, we seek comment on the following proposed amendment to § 54.511(b) of our rules:

(e) The service provider must certify on the FCC Form 473 and FCC Form 474 that it is charging schools, school districts, libraries, library consortia or consortia including any of these entities,

the lowest corresponding price for supported services, unless the Commission, with respect to interstate services, or the state commission, with respect to intrastate prices, had found that the lowest corresponding prices is not compensatory.

295. *State and Local Law Compliance by Service Providers.* There are state and local procurement laws that protect against waste, fraud, and abuse.

Currently, our rules require applicants to comply with state and local competitive bidding requirements, but do not impose any such duty on service providers. State and local procurement requirements protect against waste, fraud and abuse. Therefore, we propose to amend §§ 54.503 and 54.504 to require service providers to comply with state and local procurement laws, and to require service providers to certify compliance with that requirement. Specifically, we seek comment on the following proposed rule changes to § 54.503(b) of our rules:

(b) Competitive Bid Requirements.

(1) Except as provided in § 54.511(c), an eligible school, school districts, library, or consortium that includes an eligible school or library shall seek competitive bids, pursuant to the requirements established in this subpart, for all services eligible for support under § 54.502. These competitive bid requirements apply in addition to state and local competitive bid requirements and are not intended to preempt such state or local requirements.

(2) Service providers must certify that they are in compliance with state and local procurement laws.

296. We also propose to require service providers to certify that the service provider complied with all applicable state and local procurement laws when it participated in the competitive bidding processes as part of submitting an FCC Form 474. Thus, in addition to seeking comments above on adding paragraph (h) in § 54.504 of our rules, we also seek comment on adding the following required certification:

(3) The service provider is in compliance with state and local procurement laws.

297. As we move forward with other reforms of the E-rate program, we also seek comment on additional certifications that may be necessary to ensure that funds are being used for their intended purpose.

298. We seek comment on the benefits and burdens on service providers and applicants should we adopt these proposed changes to our rules. Are there state or local procurement requirements that do not currently apply to E-rate

service providers? We also seek comment on whether there are other obligations on applicants within the rules that do not have corresponding obligations on service providers that we should consider adopting to ensure that service providers are held responsible where appropriate and necessary to guard against waste, fraud and abuse.

4. Post-Commitment Compliance and Enforcement

299. The Commission currently has tools available to ensure compliance with our rules and to impose penalties upon those parties who willfully violate our rules. The Commission's USF audit program, called the Beneficiary and Contributor Audit Program (BCAP), is one of our most important tools for identifying and deterring program rule violations, and for recovering funding that has been improperly disbursed. We take this opportunity to reinforce our continuing commitment to ensuring that the Commission and USAC have a rigorous audit program that includes both targeted audits of high-risk applicants and vendors as well as random audits to ensure that all applicants and vendors comply with our rules. We also take this opportunity to seek comment on whether there are ways to further strengthen the BCAP audit procedures to ensure that compliance issues, particularly substantial ones, are identified.

300. Recently, in reforming the USF Lifeline program, the Commission required that every eligible telecommunications carrier (ETC) providing Lifeline services and drawing \$5 million or more in the aggregate on an annual basis from the Lifeline program hire an independent audit firm to assess the ETC's overall compliance with the program's requirements. Those audits must be performed once every two years, unless otherwise directed by the Commission. We seek comment on whether we should adopt a similar third-party independent audit requirement for E-rate applicants or service providers as a method of augmenting the current BCAP program. If so, what should we establish as the threshold for the audits? Should it be a set dollar amount or should it be the top percentage of recipients—for example, the top 1 percent or the top 20 funding requests—regardless of the dollar amounts? Should the threshold be based on funding requests or funding actually disbursed? How often should such an audit be required? Would the frequency of such a requirement be different if the audit identified issues or it had no findings? What would be the burden of such a requirement on applicants and

service providers? We recognize that some other federal programs require funding recipients to conduct annual audits, and seek comment on whether there are audit requirements in those programs that we should adopt in the E-rate program. We also seek comment on any other ways the Commission could improve its own audit processes.

301. We also seek comment on whether the Commission should revise its suspension and debarment rules to further ensure that individuals and entities that have violated the E-rate program rules cannot do so in the future. The Commission currently has rules providing for suspension and debarment from participation in universal service programs when there have been certain criminal convictions or civil judgments. We note that there is a government-wide debarment and suspension system for non-procurement programs and activities, for which OMB guidance is set forth in part 180 of Title 2 of the Code of Federal Regulations. We seek comment on the pros and cons of participating in that government-wide debarment and suspension system in administering our universal service programs. We seek comment on any policies or procedures that we should adopt if we were to implement part 180, and in particular on what procedures would be "consistent with the [OMB] guidance." We seek comment on the extent to which our existing procedures for appealing a suspension or debarment could be used, or whether different or additional procedures should be employed.

302. We also seek comment on how we should address those matters for which the OMB guidelines give each agency some discretion, including both those noted below and the other matters identified in the part 180 rules. For example, under the government-wide system agencies have some discretion to define the scope of transactions that a person excluded or disqualified under those rules generally is restricted from participating in. Under the government-wide system, the guidelines apply to at least these two categories of transactions: A "primary tier between a federal agency and a person"; and a "lower tier between a participant in a covered transaction and another person." Under this framework, however, each agency's implementing regulations must address whether certain subcontracts also should be transactions covered by these rules. We seek comment on these issues here. Would it be appropriate or desirable to designate contracts between a service provider and its subcontractors in the E-rate context as "an additional tier of

contracts" that should be included as a "covered transaction?" Alternatively, should certain transactions be exempted from coverage? Proponents of any expansion or contraction of covered transactions should explain the rationale for their recommendations. As another example, we also seek comment on considerations that might be appropriate in implementing § 180.135, which allows a Federal agency head or designee to "grant an exception permitting an excluded person to participate in a particular covered transaction."

303. In addition, we note that the OMB government-wide guidelines in part 180 of title 2 afford substantial discretion to agencies to evaluate whether or not to suspend or debar depending on the individual circumstances presented. Even in the absence of full implementation of part 180 of Title 2 of the Code of Federal Regulations, should the Commission adopt rules for suspension and debarment similar to those set forth in subpart G of part 180 of Title 2 (Suspension) and subpart H of part 180 of Title 2 (Debarment)? What other discretionary factors should be considered, if any, in addition to those set forth in part 180? For example, should we treat service providers differently than applicants and consultants in any circumstances? Should parties in some circumstances have an opportunity to shorten their debarment period by demonstrating that they have instituted a compliance plan with training and oversight that will facilitate program compliance? Should repeat offenders be treated differently than those violating our rules for the first time? We seek comment on these and any other factors we should take into consideration if the Commission revises its suspension and debarment rules to allow for more discretion than exists under the current regulations, which provide for debarment only after certain criminal convictions or civil judgments.

E. Wireless Community Hotspots

304. We next inquire whether we should continue to increase the reach of E-rate supported services. In the *Schools and Libraries Sixth Report and Order*, the Commission revised its rules to allow schools to open their facilities to the general public to utilize services supported by E-rate when classes are not in session. The Commission recognized that providing community use on school premises was consistent with the overarching goals of universal service to promote access to telecommunications and information

services. In order to effectuate this change, the Commission amended §§ 54.503 and 54.504 to require applicants to certify that “[t]he services the applicant purchases at discounts will be used *primarily* for educational purposes,” as opposed to *solely* for education purposes. We now seek comment on whether we should permit schools to provide wireless hotspots to surrounding communities using E-rate supported services.

305. We first seek comment on permitting students and the general public to receive E-rate funded Internet access offsite through wireless hotspots. In allowing community use of schools’ E-rate supported broadband services, the Commission recognized that students’ need for broadband access does not end when their schools’ doors close for the day. Allowing after-hours, on-premises access to a school’s broadband connections has given students the opportunity to work on homework, school projects and engage in extracurricular activities that require broadband access. At the same time, it has allowed other community members broadband access for adult education, job training, digital literacy programs, and online access to governmental services and resources. However, not all community members who need broadband access can take advantage of on-premises access to school’s broadband services. For example, in response to this issue, Oakland Unified School District and Revere Public Schools both filed petitions with the Commission seeking waivers of our rules to allow them to provide wireless hotspots in communities surrounding their schools. We therefore seek public input on the prospect of permitting wireless hotspots for communities.

306. We also ask whether we should implement other changes to the E-rate program to accommodate the use of wireless hotspots. Currently, services used off school or library property are generally ineligible for E-rate support because they are not deemed to be used for “educational purposes.” Therefore, if applicants use a service both on-premises and off-premises, they must reduce their funding request by the amount of the ineligible off-site use. Recognizing the potential value to students and the broader community of having access to broadband services off-premises, are there programmatic changes we should make to ensure applicants are able to deploy such wireless hotspots? Do we need to further revise the educational purposes standard if we permit off-premises access for community use?

307. To reduce the likelihood of waste, fraud, and abuse, and to guard against potential additional costs being imposed on the E-rate program, the Commission adopted several conditions for allowing community use of schools’ E-rate supported services during non-school hours. Specifically, (1) schools are not permitted to request funding for more services than are necessary for educational purposes and may not seek funding for more services or equipment than necessary to serve its current school or library population; (2) the use of E-rate funded services after hours must comply with Commission rules, including CIPA; and (3) consistent with the Act, the discounted services or network capacity may not be “sold, resold, or transferred by such user in consideration for money or any other thing of value.” Should we impose the same conditions with respect to off-site access via wireless hotspots? We seek comment on whether there are any unique circumstances in the context of offsite use that would reasonably change these conditions. Furthermore, we seek comment on whether there are any additional conditions to guard against waste, fraud, and abuse that should be imposed on E-rate applicants that use E-rate funded services for wireless community use.

308. We also seek comment on what other conditions we should impose on allowing community access to schools’ E-rate supported services via community hot spots. Our rules allowing for community use in schools limits that use to non-school hours. Should we impose the same limitation here? Is there a justification for such a limitation in this case where wireless service will be accessible at all hours and, unlike the community use implemented in the *Schools and Libraries Sixth Report and Order*, does not require use of the applicant’s physical property? Are there reasons to preclude access to the wireless service during school hours? Would permitting such wireless access to the community during school hours be detrimental to the operations of the school? For example, could testing or other school operations reliant on broadband be negatively affected by community access during school hours? If so, are there any measures applicants could take to reduce the impact of the community access on the applicant? Next, should we impose any geographic limitations on the scope of offsite Internet access? What restrictions, if any, should be placed on service providers in the communities that donate equipment, services or funding

to help with the creation or expansion of the Internet access points to ensure no violations of the Commission’s gift rules occur? We also seek comment on the adequacy of security measures that would be needed to guard against network security breaches. What other issues are raised by this idea?

F. Procedures for National Emergencies

309. *Discussion.* In considering what specific disaster relief mechanisms to adopt, we first consider the circumstances under which such relief procedures should apply. We propose to apply relief procedures to schools and libraries that have been directly affected by any event determined by the President of the United States to be either an “Emergency” or a “Major Disaster,” as defined by the Federal Emergency Management Agency (FEMA); which has caused severe structural damage and displaced student and patron populations, and also to those schools and libraries indirectly affected by a Major Disaster who absorb displaced populations. We note that FEMA declares numerous Emergencies and Major Disasters every year, and therefore seek comment on how to properly limit any new rule to ensure it only applies to schools and libraries in communities that have suffered major disruptions. We also seek comment on how to measure the amount of disruption to an applicant. Finally, who should make the final determination that there has been enough of a disruption to warrant relief?

310. Next, we seek comment on what particular relief procedures we should adopt. For example, we recognize that schools and libraries may need additional time to file programmatic forms, appeals, and to answer questions from USAC. We therefore propose to delegate authority to the Bureau to extend Commission deadlines for filing documents, and to direct USAC to do the same with respect to its procedures. We also propose to excuse the record retention requirement for applicants whose records are destroyed in an Emergency or Major Disaster and cannot be recovered or recreated, although we propose to require that applicants whose records were destroyed document the loss of their records.

311. We also recognize that schools and libraries affected by a Major Disaster or Emergency may need time to repair or rebuild buildings and to restore telecommunications and Internet access services and that, in the event of evacuation, schools not directly affected by the Major Disaster or Emergency may need additional funding to support the needs of displaced students and

citizens. We therefore seek comment on allowing USAC to initiate a special filing window upon the declaration of a Major Disaster or Emergency for sixty days to allow applicants directly and indirectly affected to apply for E-rate eligible services and products. When there is a Major Disaster or Emergency, we also propose to exempt affected applicants from the FCC Form 470 filing requirement and the 28-day waiting period so long as such applicants comply with state and local bidding requirements. We propose to allow affected applicants to “restart the clock” for the purposes of calculating compliance with the “two-in-five” rule for priority two services and excusing them from the requirement that substituted services or products have the same functionality as the services they are replacing.

312. Finally, we propose to require affected applicants to make certain certifications on their emergency relief forms to USAC similar to those found in the *Hurricane Katrina Order*, 70 FR 65850, November 1, 2005, to guard against waste, fraud and abuse. For example, we propose to require applicants to certify that they incurred substantial structural damage as a result of the Major Disaster and/or Emergency and that the services and products sought in their applications will be solely used to restore the network to the functional equivalent of the pre-Major Disaster or Emergency degree of functionality and that other resources are not available for restoration. We also propose to require applicants to certify that any alternative funding in excess of the cost for products or services requested on their applications will be returned to the federal Universal Service Fund. To the extent that applicants are handling increased populations, those applicants shall certify that there are more than a *de minimis* number of Major Disaster or Emergency victims and the applicant experience an associated increase in the demand for E-rate eligible services and/or products.

313. We also seek comment on whether there are other policies and rules that should govern circumstances in which schools and libraries are faced with an Emergency or Major Disaster.

VII. Procedural Matters

A. Initial Regulatory Flexibility Analysis

314. As required by the Regulatory Flexibility Act of 1980, as amended (RFA), the Commission has prepared this Initial Regulatory Flexibility Analysis (IRFA) of the possible significant economic impact on a substantial number of small entities by

the policies and rules proposed in this Notice of Proposed Rulemaking (NPRM). Written comments are requested on this IRFA. Comments must be identified as responses to the IRFA and must be filed by the deadlines for comments on the NPRM. The Commission will send a copy of the NPRM, including this IRFA, to the Chief Counsel for Advocacy of the Small Business Administration (SBA). In addition, the NPRM and IRFA (or summaries thereof) will be published in the **Federal Register**.

315. The Commission is required by section 254 of the Communications Act of 1934, as amended, to promulgate rules to implement the universal service provisions of section 254. On May 8, 1997, the Commission adopted rules to reform its system of universal service support mechanisms so that universal service is preserved and advanced as markets move toward competition. Specifically, under the schools and libraries universal service support mechanism, also known as the E-rate program, eligible schools, libraries, and consortia that include eligible schools and libraries may receive discounts for eligible telecommunications services, Internet access, and internal connections.

B. Need for, and Objectives of, the Proposed Rules

316. This NPRM is a part of the Commission’s continual efforts to improve the E-rate program. In it, we propose specific goals and measures by (1) ensuring that schools and libraries have affordable access to 21st Century broadband that supports digital learning, (2) maximizing the cost-effectiveness of E-rate funds and (3) streamline the administration of the E-rate program. The rules we propose in this NPRM are directed at enabling us to meet these goals.

C. Legal Basis

317. The legal basis for the NPRM is contained in sections 1 through 4, 201–205, 254, 303(r), and 403 of the Communications Act of 1934, as amended by the Telecommunications Act of 1996, 47 U.S.C. 151 through 154, 201 through 205, 254, 303(r), and 403.

D. Description and Estimate of the Number of Small Entities to Which the Proposed Rules Will Apply

318. The RFA directs agencies to provide a description of and, where feasible, an estimate of the number of small entities that may be affected by the proposed rules, if adopted. The RFA generally defines the term “small entity” as having the same meaning as

the terms “small business,” “small organization,” and “small governmental jurisdiction.” In addition, the term “small business” has the same meaning as the term “small business concern” under the Small Business Act. A small business concern is one that: (1) is independently owned and operated; (2) is not dominant in its field of operation; and (3) satisfies any additional criteria established by the Small Business Administration (SBA). Nationwide, there are a total of approximately 27.5 million small businesses, according to the SBA. A “small organization” is generally “any not-for-profit enterprise which is independently owned and operated and is not dominant in its field.”

319. Nationwide, as of 2002, there were approximately 1.6 million small organizations. The term “small governmental jurisdiction” is defined generally as “governments of cities, towns, townships, villages, school districts, or special districts, with a population of less than fifty thousand.” Census Bureau data for 2002 indicate that there were 87,525 local governmental jurisdictions in the United States. We estimate that, of this total, 84,377 entities were “small governmental jurisdictions.” Thus, we estimate that most governmental jurisdictions are small.

320. Small entities potentially affected by the proposals herein include eligible schools and libraries and the eligible service providers offering them discounted services.

1. Schools and Libraries

321. As noted, “small entity” includes non-profit and small government entities. Under the schools and libraries universal service support mechanism, which provides support for elementary and secondary schools and libraries, an elementary school is generally “a non-profit institutional day or residential school that provides elementary education, as determined under state law.” A secondary school is generally defined as “a non-profit institutional day or residential school that provides secondary education, as determined under state law,” and not offering education beyond grade 12. A library includes “(1) a public library, (2) a public elementary school or secondary school library, (3) an academic library, (4) a research library [] and (5) a private library, but only if the state in which such private library is located determines that the library should be considered a library for the purposes of this definition.” For-profit schools and libraries, and schools and libraries with endowments in excess of \$50,000,000,

are not eligible to receive discounts under the program, nor are libraries whose budgets are not completely separate from any schools. Certain other statutory definitions apply as well. The SBA has defined for-profit, elementary and secondary schools and libraries having \$6 million or less in annual receipts as small entities. In funding year 2007, approximately 105,500 schools and 10,950 libraries received funding under the schools and libraries universal service mechanism. Although we are unable to estimate with precision the number of these entities that would qualify as small entities under SBA's size standard, we estimate that fewer than 105,500 schools and 10,950 libraries might be affected annually by our action, under current operation of the program.

2. Telecommunications Service Providers

322. Incumbent Local Exchange Carriers (LECs). Neither the Commission nor the SBA has developed a size standard for small incumbent local exchange services. The closest size standard under SBA rules is for Wired Telecommunications Carriers. Under that size standard, such a business is small if it has 1,500 or fewer employees. According to Commission data, 1,307 incumbent carriers reported that they were engaged in the provision of local exchange services. Of these 1,307 carriers, an estimated 1,006 have 1,500 or fewer employees and 301 have more than 1,500 employees. Thus, under this category and associated small business size standard, we estimate that the majority of entities are small. We have included small incumbent local exchange carriers in this RFA analysis. A "small business" under the RFA is one that, inter alia, meets the pertinent small business size standard (e.g., a telephone communications business having 1,500 or fewer employees), and "is not dominant in its field of operation." The SBA's Office of Advocacy contends that, for RFA purposes, small incumbent local exchange carriers are not dominant in their field of operation because any such dominance is not "national" in scope. We have therefore included small incumbent carriers in this RFA analysis, although we emphasize that this RFA action has no effect on the Commission's analyses and determinations in other, non-RFA contexts.

323. Interexchange Carriers. Neither the Commission nor the SBA has developed a definition of small entities specifically applicable to providers of interexchange services (IXCs). The

closest applicable definition under the SBA rules is for wired telecommunications carriers. This provides that a wired telecommunications carrier is a small entity if it employs no more than 1,500 employees. According to the Commission's *2010 Trends Report*, 359 companies reported that they were engaged in the provision of interexchange services. Of these 300 IXCs, an estimated 317 have 1,500 or fewer employees and 42 have more than 1,500 employees. Consequently, the Commission estimates that most providers of interexchange services are small businesses.

324. Competitive Access Providers. Neither the Commission nor the SBA has developed a definition of small entities specifically applicable to competitive access services providers (CAPs). The closest applicable definition under the SBA rules is for wired telecommunications carriers. This provides that a wired telecommunications carrier is a small entity if it employs no more than 1,500 employees. According to the *2010 Trends Report*, 1,442 CAPs and competitive local exchange carriers (competitive LECs) reported that they were engaged in the provision of competitive local exchange services. Of these 1,442 CAPs and competitive LECs, an estimated 1,256 have 1,500 or fewer employees and 186 have more than 1,500 employees. Consequently, the Commission estimates that most providers of competitive exchange services are small businesses.

325. Wireless Telecommunications Carriers (except Satellite). Since 2007, the Census Bureau has placed wireless firms within this new, broad, economic census category. Prior to that time, such firms were within the now-superseded categories of "Paging" and "Cellular and Other Wireless Telecommunications." Under the present and prior categories, the SBA has deemed a wireless business to be small if it has 1,500 or fewer employees. Because Census Bureau data are not yet available for the new category, we will estimate small business prevalence using the prior categories and associated data. For the category of Paging, data for 2002 show that there were 807 firms that operated for the entire year. Of this total, 804 firms had employment of 999 or fewer employees, and three firms had employment of 1,000 employees or more. For the category of Cellular and Other Wireless Telecommunications, data for 2002 show that there were 1,397 firms that operated for the entire year. Of this total, 1,378 firms had employment of 999 or fewer employees,

and 19 firms had employment of 1,000 employees or more. Thus, we estimate that the majority of wireless firms are small.

326. Wireless Telephony. Wireless telephony includes cellular, personal communications services, and specialized mobile radio telephony carriers. As noted, the SBA has developed a small business size standard for Wireless Telecommunications Carriers (except Satellite). Under the SBA small business size standard, a business is small if it has 1,500 or fewer employees. According to the *2010 Trends Report*, 413 carriers reported that they were engaged in wireless telephony. Of these, an estimated 261 have 1,500 or fewer employees and 152 have more than 1,500 employees. We have estimated that 261 of these are small under the SBA small business size standard.

327. Common Carrier Paging. As noted, since 2007 the Census Bureau has placed paging providers within the broad economic census category of Wireless Telecommunications Carriers (except Satellite). Prior to that time, such firms were within the now-superseded category of "Paging." Under the present and prior categories, the SBA has deemed a wireless business to be small if it has 1,500 or fewer employees. Because Census Bureau data are not yet available for the new category, we will estimate small business prevalence using the prior category and associated data. The data for 2002 show that there were 807 firms that operated for the entire year. Of this total, 804 firms had employment of 999 or fewer employees, and three firms had employment of 1,000 employees or more. Thus, we estimate that the majority of paging firms are small.

328. In addition, in the *Paging Second Report and Order*, the Commission adopted a size standard for "small businesses" for purposes of determining their eligibility for special provisions such as bidding credits and installment payments. A small business is an entity that, together with its affiliates and controlling principals, has average gross revenues not exceeding \$15 million for the preceding three years. The SBA has approved this definition. An initial auction of Metropolitan Economic Area ("MEA") licenses was conducted in the year 2000. Of the 2,499 licenses auctioned, 985 were sold. Fifty-seven companies claiming small business status won 440 licenses. A subsequent auction of MEA and Economic Area ("EA") licenses was held in the year 2001. Of the 15,514 licenses auctioned, 5,323 were sold. One hundred thirty-two companies claiming small business

status purchased 3,724 licenses. A third auction, consisting of 8,874 licenses in each of 175 EAs and 1,328 licenses in all but three of the 51 MEAs, was held in 2003. Seventy-seven bidders claiming small or very small business status won 2,093 licenses.

329. Currently, there are approximately 74,000 Common Carrier Paging licenses. According to the most recent Trends in Telephone Service, 291 carriers reported that they were engaged in the provision of "paging and messaging" services. Of these, an estimated 289 have 1,500 or fewer employees and two have more than 1,500 employees. We estimate that the majority of common carrier paging providers would qualify as small entities under the SBA definition.

3. Internet Service Providers

330. The 2007 Economic Census places these firms, whose services might include voice over Internet protocol (VoIP), in either of two categories, depending on whether the service is provided over the provider's own telecommunications facilities (e.g., cable and DSL ISPs), or over client-supplied telecommunications connections (e.g., dial-up ISPs). The former are within the category of Wired Telecommunications Carriers, which has an SBA small business size standard of 1,500 or fewer employees. The latter are within the category of All Other Telecommunications, which has a size standard of annual receipts of \$25 million or less. The most current Census Bureau data for all such firms, however, are the 2002 data for the previous census category called Internet Service Providers. That category had a small business size standard of \$21 million or less in annual receipts, which was revised in late 2005 to \$23 million. The 2002 data show that there were 2,529 such firms that operated for the entire year. Of those, 2,437 firms had annual receipts of under \$10 million, and an additional 47 firms had receipts of between \$10 million and \$24,999,999. Consequently, we estimate that the majority of ISP firms are small entities.

4. Vendors of Internal Connections

331. *Telephone Apparatus Manufacturing.* The Census Bureau defines this category as follows: "This industry comprises establishments primarily engaged in manufacturing wire telephone and data communications equipment. These products may be standalone or board-level components of a larger system. Examples of products made by these establishments are central office switching equipment, cordless

telephones (except cellular), PBX equipment, telephones, telephone answering machines, LAN modems, multi-user modems, and other data communications equipment, such as bridges, routers, and gateways." The SBA has developed a small business size standard for Telephone Apparatus Manufacturing, which is: all such firms having 1,000 or fewer employees. According to Census Bureau data for 2002, there were a total of 518 establishments in this category that operated for the entire year. Of this total, 511 had employment of under 1,000, and an additional seven had employment of 1,000 to 2,499. Thus, under this size standard, the majority of firms can be considered small.

332. *Radio and Television Broadcasting and Wireless Communications Equipment Manufacturing.* The Census Bureau defines this category as follows: "This industry comprises establishments primarily engaged in manufacturing radio and television broadcast and wireless communications equipment. Examples of products made by these establishments are: transmitting and receiving antennas, cable television equipment, GPS equipment, pagers, cellular phones, mobile communications equipment, and radio and television studio and broadcasting equipment." The SBA has developed a small business size standard for firms in this category, which is: all such firms having 750 or fewer employees. According to Census Bureau data for 2002, there were a total of 1,041 establishments in this category that operated for the entire year. Of this total, 1,010 had employment of under 500, and an additional 13 had employment of 500 to 999. Thus, under this size standard, the majority of firms can be considered small.

333. *Other Communications Equipment Manufacturing.* The Census Bureau defines this category as follows: "This industry comprises establishments primarily engaged in manufacturing communications equipment (except telephone apparatus, and radio and television broadcast, and wireless communications equipment)." The SBA has developed a small business size standard for Other Communications Equipment Manufacturing, which is having 750 or fewer employees. According to Census Bureau data for 2002, there were a total of 503 establishments in this category that operated for the entire year. Of this total, 493 had employment of under 500, and an additional 7 had employment of 500 to 999. Thus, under

this size standard, the majority of firms can be considered small.

E. Description of Projected Reporting, Recordkeeping, and Other Compliance Requirements for Small Entities

334. Several proposals under consideration in the NPRM may, if adopted, result in additional recordkeeping requirements for small entities. It is possible that an increase in purchasing consortia could result in an increase in consortia-imposed additional reporting requirements. Additionally, reducing competitive bidding that results in a single bid would increase the number of price matrices E-rate recipients would be required to prepare.

F. Steps Taken To Minimize the Significant Economic Impact on Small Entities, and Significant Alternatives Considered

335. The RFA requires an agency to describe any significant, specifically small business, alternatives that it has considered in reaching its proposed approach, which may include the following four alternatives (among others): "(1) the establishment of differing compliance or reporting requirements or timetables that take into account the resources available to small entities; (2) the clarification, consolidation, or simplification of compliance and reporting requirements under the rule for such small entities; (3) the use of performance rather than design standards; and (4) an exemption from coverage of the rule, or any part thereof, for such small entities."

336. In this NPRM, we seek to improve and modernize the program by proposing the goals of (1) ensuring that schools and libraries have affordable access to 21st Century broadband that supports digital learning, (2) maximizing the cost-effectiveness of E-rate funds and (3) streamlining the administration of the E-rate program.

337. We recognize that several of our proposed rules would impact small entities. Most of the rules we propose would lessen reporting burdens on small entities. In those instances in which a proposed rule would increase these burdens on small entities, we have determined that the benefits from these rules outweigh the increased burdens on small entities.

1. Proposed Rules That Lessen Reporting Burdens

338. *Single filing for multi-year contract.* Our proposal to allow E-rate applicants with multi-year contracts that are no more than three years in length (including any voluntary

extensions) to file a single FCC Form 471 application for the funding year in which the contract commences would lessen reporting burdens on E-rate recipients by relieving them of the obligation to file an FCC Form 471 for some funding years.

339. Internal connections applications by school district. Requiring all schools and libraries that are part of the same school district to submit applications for priority two internal connections by school district, rather than by individual school, would streamline the process and simplify the discount calculation for the applicant. Rather than making a discount calculation for each school within a district, an applicant would merely be required to make a district-wide discount calculation.

340. Phasing out support for certain services. Phasing out support for certain services would lessen reporting burdens on small entities because, under this proposal, E-rate applicants would no longer be required to comply with E-rate rules for phased-out services. There would be no change to reporting burdens for services that are being phased down because E-rate applicants and recipients would still be required to comply with E-rate rules.

341. Priority two services. Our proposal to require that any school that is part of an organized school district must apply for priority two internal connections by school district, rather than by school, would lessen reporting burdens by simplifying the discount calculation for schools.

342. Regulatory classification. Likewise, our proposal to adopt a rule that allows funding for eligible services regardless of regulatory classification would simplify reporting requirements because E-rate applicants would no longer be required to designate regulatory classifications to seek eligible services from any entity.

343. Invoicing and disbursement process. We propose to permit applicants who submit a Billed Entity Application for Reimbursement (BEAR) Form to receive reimbursement directly from USAC, rather than receiving reimbursement from the service provider after USAC reimburses it. This proposal would lessen reporting burdens because the service provider would no longer serve as the pass-through for the reimbursement of funds.

2. Proposed Rules That Increase Reporting Burdens

344. Compliance burdens. Implementing any of our proposed rules would impose some burden on small entities by requiring them to become

familiar with the new rule to comply with it. For many proposed rules, such as those to refresh funding priorities, streamline the Eligible Services List, increase matching funds, redefine “rural,” institute per-student or per-building caps, provide priority one support for the modulating electronics necessary to light dark fiber and amend the formula for determining what discounts some schools and libraries receive, this is the sole additional burden on small entities. The importance of accomplishing our goals of (1) ensuring that schools and libraries have affordable access to 21st Century broadband that supports digital learning, (2) maximizing the cost-effectiveness of E-rate funds and (3) streamlining the administration of the E-rate program outweighs the minimal burden requiring small entities to comply with new rules would impose.

345. Increasing transparency of prices. Our proposal to increase transparency of prices by either publicly disclosing all bids for E-rate supported services or disclosing all purchase prices would increase reporting burdens on entities required to provide this information to the Administrator, the Universal Service Administrative Company (USAC). Because E-rate applicants would already have this information, the additional burden reporting it to USAC would be minimal. The benefit other E-rate applicants would enjoy from being able to compare bids and purchases would far outweigh this minimal burden.

346. Electronic filing. Requiring all users to file all E-rate-related forms electronically should benefit E-rate applicants because it would provide a streamlined process and make forms easily accessible. We recognize that requiring electronic filing may burden users who do not have Internet access due to unreliable Internet access or emergency situations. Because of this, we seek comment on alternative filing requirements for these users. Ultimately, the cost savings for USAC and added efficiency of requiring electronic filing outweigh but burden of electronic filing on E-rate applicants and recipients.

347. Separate filing windows. Separating filing windows for priority one and priority two services would increase reporting requirements for the limited number of E-rate recipients who receive priority two services but would decrease reporting burdens for those E-rate recipients whose discount percentage prevents them from receiving priority two services. The benefit of simplifying the application process for those who will not receive priority one services justifies the added

burden of filing separate applications for those who will receive priority two services.

348. Document retention period. Extending the E-rate document retention requirement from five years after the last day of the delivery of services to ten years after the last day of the delivery of services would increase administrative burdens on E-rate recipients by requiring them to retain documents for a longer period of time. The Commission’s interest in combating waste, fraud and abuse by litigating matters under the False Claims Act, which can involve conduct that relates back substantially more than five years, justifies this additional burden.

349. Competitive bidding documentation. We propose to require applicants to submit to USAC competitive bidding documents, including a copy of each bid received, the bid evaluation criteria, bid sheets, a list of people who evaluated bids, memos, board minutes, or similar documents, and any correspondence with vendors during the bidding, evaluation, and award phase of the process. Providing such documents would impose additional burdens on E-rate applicants and could increase application review time and administrative costs. The benefit of allowing USAC to evaluate more fully the competitive bidding process conducted by E-rate applicants and ensure that documentation of the competitive bidding process was retained in the event of an audit outweighs this burden.

350. FCC Form Signatories. Our proposal to require that an officer of the service provider make the required certifications on the FCC Form 472 (BEAR Form), FCC Form 473 (Service Provider Annual Certification Form) and the FCC Form 474 (SPI Form) as well as certify compliance with the lowest corresponding price rule and state and local procurement laws would impose minimal additional burdens on small entities because these entities are already required to ensure compliance with E-rate rules. The only new requirement under this proposal is for officers to certify that they have complied with E-rate rules. The benefit of ensuring that the certification reflects the service provider’s commitment to understand and comply with the E-rate program rules and requirements outweighs this burden. Additionally, we propose to require all E-rate forms submitted by E-rate applicants be signed by someone with authority equivalent to that of a corporate officer. This proposal would impose the additional burden of requiring corporate officers of small

entities to become familiar enough with E-rate applications that they can make the certifications. The Commission's interest in combating waste, fraud and abuse outweighs this burden. Because of the burden this proposal may impose on small entities, we seek comment on alternatives to it.

351. *National emergencies.* The proposed procedures for national emergencies would require the Commission to waive document retention requirements for E-rate recipients whose records are destroyed in an Emergency or Major Disaster if the recipients document the loss of their records. Other proposals would require applicants affected by an Emergency or Major Disaster to make certifications regarding the extent of the damage they incurred, the extent of planned repairs, funding for repairs, population changes and funding demand changes to receive additional assistance after an Emergency or Major Disaster. E-rate recipients affected by an Emergency or Major Disaster would not incur additional requirements if they do not seek additional assistance. The Commission's strong interest in preventing waste, fraud and abuse justifies the minimal burdens that documenting the loss of records and making these certifications would impose.

352. As noted, we believe the proposals and options being introduced for comment will not have a significant economic impact on small entities under the E-rate program. Indeed, the proposals and options will benefit small entities by simplifying processes, ensuring access to broadband, maximizing cost-effectiveness and maximizing efficiency. We nonetheless invite commenters, in responding to the questions posed and tentative conclusions in the NPRM, to discuss any economic impact that such changes may have on small entities, and possible alternatives.

G. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rules

None.

353. *It is ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall send* a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

H. Paperwork Reduction Act Analysis

354. This NPRM seeks comment on a potential new or revised information collection requirement. If the

Commission adopts any new or revised information collection requirement, the Commission will publish a separate notice in the **Federal Register** inviting the public to comment on the requirement, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3501–3520). In addition, pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, 44 U.S.C. 3506(c)(4), the Commission seeks specific comment on how it might “further reduce the information collection burden for small business concerns with fewer than 25 employees.”

I. Ex Parte Presentations

355. *Permit-But-Disclose.* The proceeding this Public Notice initiates shall be treated as a “permit-but-disclose” proceeding in accordance with the Commission's *ex parte* rules. Persons making *ex parte* presentations must file a copy of any written presentation or a memorandum summarizing any oral presentation within two business days after the presentation (unless a different deadline applicable to the Sunshine period applies). Persons making oral *ex parte* presentations are reminded that memoranda summarizing the presentation must (1) list all persons attending or otherwise participating in the meeting at which the *ex parte* presentation was made, and (2) summarize all data presented and arguments made during the presentation. If the presentation consisted in whole or in part of the presentation of data or arguments already reflected in the presenter's written comments, memoranda or other filings in the proceeding, the presenter may provide citations to such data or arguments in his or her prior comments, memoranda, or other filings (specifying the relevant page and/or paragraph numbers where such data or arguments can be found) in lieu of summarizing them in the memorandum. Documents shown or given to Commission staff during *ex parte* meetings are deemed to be written *ex parte* presentations and must be filed consistent with § 1.1206(b). In proceedings governed by § 1.49(f) or for which the Commission has made available a method of electronic filing, written *ex parte* presentations and memoranda summarizing oral *ex parte* presentations, and all attachments thereto, must be filed through the electronic comment filing system available for that proceeding, and must be filed in their native format (e.g., .doc, .xml, .ppt, searchable .pdf). Participants

in this proceeding should familiarize themselves with the Commission's *ex parte* rules.

VIII. Ordering Clauses

356. Accordingly, *it is ordered* that, pursuant to the authority contained in sections 1 through 4, 201–205, 254, 303(r), and 403 of the Communications Act of 1934, as amended by the Telecommunications Act of 1996, 47 U.S.C. 151 through 154, 201 through 205, 254, 303(r), and 403, this Notice of Proposed Rulemaking *is adopted*.

357. *It is further ordered* that the Commission's Consumer and Governmental Affairs Bureau, Reference Information Center, *shall send* a copy of this Notice of Proposed Rulemaking, including the Initial Regulatory Flexibility Analysis, to the Chief Counsel for Advocacy of the Small Business Administration.

List of Subjects in 47 CFR Part 54

Communications common carriers, Reporting and record keeping requirements, Telecommunications, Telephone.

Federal Communications Commission.

Marlene H. Dortch,
Secretary.

Proposed Rules

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR part 54, subpart F, as follows:

PART 54—UNIVERSAL SERVICE

Subpart F—Universal Service Support for Schools and Libraries

■ 1. The authority citation for part 54 continues to read as follows:

Authority: Sections 1, 4(i), 5, 201, 205, 214, 219, 220, 254, 303(r), and 403 of the Communications Act of 1934, as amended, and section 706 of the Communications Act of 1996, as amended; 47 U.S.C. 151, 154(i), 155, 201, 205, 214, 219, 220, 254, 303(r), 403, and 1302 unless otherwise noted.

■ 2. Amend § 54.503 by revising paragraphs (b) and (c)(2) introductory text to read as follows:

§ 54.503 Competitive bidding requirements.

* * * * *

(b) *Competitive bid requirements.* (1) Except as provided in § 54.511(c), an eligible school, school districts, library, or consortium that includes an eligible school or library shall seek competitive bids, pursuant to the requirements established in this subpart, for all services eligible for support under § 54.502. These competitive bid

requirements apply in addition to state and local competitive bid requirements and are not intended to preempt such state or local requirements.

(2) Service providers must certify that they are in compliance with state and local procurement laws.

(c) * * *

(2) The FCC Form 470 shall be signed by the person authorized to order eligible services for the eligible school, library, or consortium including such entities, and with authority equivalent to that of a corporate officer, and shall include that person's certification under oath that:

* * * * *

■ 3. Amend § 54.504 by:

■ a. Revising paragraph (a)(1)

introductory text;

■ b. Redesignating paragraph (f) as paragraph (g);

■ c. Adding new paragraph (f);

■ d. Revising newly redesignated paragraph (g) introductory text; and

■ e. Adding paragraph (h).

The revisions and additions read as follows:

§ 54.504 Requests for services.

(a) * * *

(1) The FCC Form 471 shall be signed by the person authorized to order eligible services for the eligible school, library, or consortium, and with authority equivalent to that of a corporate officer, and shall include that person's certifications under oath that:

* * * * *

(f) *Filing of FCC Form 472.* All service providers must submit a Service Provider Acknowledgement as part of the Applicant's FCC Form 472 seeking reimbursement from the Administrator for eligible services. The FCC Form 472 shall be signed by an officer of the service provider and shall include the officer's certifications under oath that:

(1) This service provider will remit the discount amount authorized by the fund administrator to the Billed Entity Applicant who prepared and submitted the Billed Entity Applicant Reimbursement Form as soon as possible after the fund administrator's notification to the service provider of the amount of the approved discounts on this Billed Entity Applicant Reimbursement Form, but in no event later than 20 business days after receipt of the reimbursement payment from the fund administrator, subject to the restriction set forth in paragraph (f)(2) of this section.

(2) This service provide will remit payment of the approved discount amount to the Billed Entity Applicant prior to tendering or making use of the

payment issued by the Universal Service Administrative Company to the service provider of the approved discounts for the Billed Entity Applicant Reimbursement Form.

(3) This service provider is in compliance with the rules and orders governing the schools and libraries universal service support program and that failure to be in compliance and remain in compliance with those rules and orders may result in the denial of discount funding and/or cancellation of funding commitment.

(4) Failure to comply with the rules and orders governing the schools and libraries universal service support program could result in civil or criminal prosecution by law enforcement authorities.

(g) *Filing of Form 473.* All service providers eligible to provide telecommunications services and other supported services under this subpart shall submit annually a completed FCC Form 473 to the Administrator. The FCC Form 473 shall be signed by an officer of the service provider and shall include that officer's certification under oath that:

* * * * *

(h) *Filing of FCC Form 474.* All service providers seeking reimbursement from the Administrator for eligible services shall submit a completed FCC Form 474 to the Administrator. The FCC Form 474 shall be signed by an officer of the service provider and shall include the officer's certifications under oath that:

(1) This service provider is in compliance with the rules and orders governing the schools and libraries universal service support program and that failure to be in compliance and remain in compliance with those rules and orders may result in the denial of discount funding and/or cancellation of funding commitment.

(2) Failure to comply with the rules and orders governing the schools and libraries universal service support program could result in civil or criminal prosecution by law enforcement authorities.

(3) The service provider is in compliance with state and local procurement laws.

■ 4. Amend § 54.505 by revising paragraphs (b)(1) and (b)(3)(i) and (ii) to read as follows:

§ 54.505 Discounts.

* * * * *

(b) * * *

(1) School districts shall calculate discounts on supported services described in § 54.502(b) by calculating a single discount percentage rate for the

entire school district by dividing the total number of students eligible for the National School Lunch Program within the school district by the total number of students within the school district. This single discount percentage rate shall then be applied to the discount matrix to set a discount rate for the supported services purchased by all schools within the school district.

* * * * *

(3) * * *

(i) Schools and libraries whose local code is city, suburb, town-fringe, or rural-fringe, as measured by the U.S. Department of Education's National Center for Education Statistics, shall be designated as urban.

(ii) Schools and libraries whose local code is town-distant, town-remote, rural-distant, or rural-remote, as measured by the U.S. Department of Education's National Center for Education Statistics, shall be designated as rural.

* * * * *

■ 5. Amend § 54.507 by redesignating paragraphs (e) and (f) as paragraphs (f) and (g) and adding new paragraph (e) to read as follows:

§ 54.507 Cap.

* * * * *

(e) *Multi-year contracts.* An eligible school, library or consortium that includes an eligible school or library seeking to receive discounts under this subpart may submit to USAC a single FCC Form 471 covering all the years of a multi-year contract, provided that the term of the contract including extensions, does not exceed three years. An FCC Form 471 covering a multi-year contract must be submitted to USAC before the start of the first funding year covered by the multi-year contract.

* * * * *

■ 6. Amend § 54.511 by redesignating paragraphs (c) and (d) as paragraphs (d) and (e) and adding new paragraph (c) and to read as follows:

§ 54.511 Ordering services.

* * * * *

(c) The service provider must certify on FCC Form 473 and FCC Form 474 that it is charging schools, school districts, libraries, library consortia or consortia including any of these entities, the lowest corresponding price for supported services, unless the Commission, with respect to intrastate prices, had found that the lowest corresponding price is not compensatory.

* * * * *

■ 7. Amend § 54.516 by revising paragraph (a) to read as follows:

§ 54.516 Auditing.

(a) *Record keeping requirements—(1) Schools, libraries and consortia.* Schools, libraries, and any consortium that includes schools and libraries shall retain all documents related to the application for, receipt, and delivery of discounted telecommunications and other supported services for at least 10 years after the last day of the delivery of services or from the end of the applicable funding year, whichever is later. Schools, libraries, and any consortium that include schools or

libraries shall also retain any other document necessary to demonstrate compliance with the statutory or regulatory requirements for the schools and libraries mechanism. Schools and libraries shall maintain asset and inventory records of equipment purchased as components of supported internal connections services sufficient to verify the actual location of such equipment for a period of five years after purchase.
(2) *Service providers.* Service providers shall retain documents related to the delivery of discounted

telecommunications and other supported services for at least 10 years after the last day of the delivery of services or from the end of the applicable funding year, whichever is later. Service providers shall also retain any other document that demonstrates compliance with the statutory or regulatory requirements for the schools and libraries universal service support mechanism.
