

The proposed Montgomery Locks and Dam Hydroelectric Project would be located at RM 31.7 and consist of the following new facilities: (1) A 340-foot-long, 205-foot-wide intake channel containing a 150-foot-long, 90-foot-high, 205-foot-wide intake structure with 5-inch bar spacing trashracks; (2) a 315-foot-long, 105-foot-high, 205-foot-wide reinforced concrete powerhouse on the north bank of the river; (3) three turbine-generator units with a combined capacity of 42 MW; (4) a 280-foot-long, 210-foot-wide tailrace; (5) a 50-foot-long by 60-foot-wide substation; (6) a 392-foot-long, 69-kV, overhead transmission line to connect the project substation to an existing distribution line; and (7) appurtenant facilities. The average annual generation would be 194,370 MWh.

Free Flow Power proposes to operate all three projects in a "run-of-river" mode using flows made available by the Corps. The proposed projects would not change existing flow releases or water surface elevations upstream or downstream of the proposed projects.

Southeast Supply Header, LLC; Notice of Intent To Prepare an Environmental Assessment for the Proposed SESH Expansion Project and Request for Comments on Environmental Issues

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the SESH Expansion Project involving construction and operation of facilities by Southeast Supply Header, LLC (SESH) in Copiah County, Mississippi. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies on the project. Your input will help the Commission staff determine what issues they need to

evaluate in the EA. Please note that the scoping period will close on April 28, 2014.

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

If you are a landowner receiving this notice, a pipeline company representative may contact you about the acquisition of an easement to construct, operate, and maintain the proposed facilities. The company would seek to negotiate a mutually acceptable agreement. However, if the Commission approves the project, that approval conveys with it the right of eminent domain. Therefore, if easement negotiations fail to produce an agreement, the pipeline company could initiate condemnation proceedings where compensation would be determined in accordance with state law.

SESH provided landowners with a fact sheet prepared by the FERC entitled "An Interstate Natural Gas Facility On My Land? What Do I Need To Know?" This fact sheet addresses a number of typically-asked questions, including the use of eminent domain and how to participate in the Commission's proceedings. It is also available for viewing on the FERC Web site (www.ferc.gov).

Summary of the Proposed Project

SESH requests approval to construct and operate a new compressor station, associated connecting piping, and appurtenant facilities in Copiah County, Mississippi. The SESH Expansion Project would create about 25,000 dekatherms per day (Dth/d) of new capacity on the SESH mainline as well as change the mainline design to reflect a total 45,000 Dth/d increase in capacity.

The SESH Expansion Project would consist of the following facilities:

- New compressor facilities (the "Dentville Compressor Station") at the SESH/Texas Eastern Transmission, LP Interconnect, which include a single 8,000 horsepower natural gas-fired reciprocating engine compressor package;
- approximately 4,000 feet of new 20-inch-diameter connecting piping and related appurtenances from the proposed Dentville Compressor Station site to an existing metering and regulating (M&R) station on the SESH mainline at milepost 73.05 and south-southwest of the Dentville Compressor Station site; and
