

Since receiving initial approval for this generic, CDC has conducted five information collections. These information collections supported an Evaluation of Adapted Health Education Materials for LEP Spanish Speakers and Indigenous Migrants; Evaluation of the TravAlert Electronic Messaging System; a project entitled Scan This: Effectiveness of Quick Response Codes for Engaging International Panel Physicians; and two collections involving CDC's Check and Report Ebola programs (CARE and CARE+) (The CARE+ evaluation is still underway as of the date of this notice). In order, these projects evaluated materials designed for specific audiences to determine if CDC's methods for communicating key public health messages were translated appropriately for low-English proficiency residents in the United States, were effective in reaching travelers in airports, were useful in making CDC's immigration medical exam technical instructions more accessible, and were helpful in reaching

individuals and assessing their knowledge, attitudes, beliefs, and behaviors concerning enhanced screening for Ebola at U.S. ports of entry and follow-up under active monitoring.

Approval of this revision of the generic information collection will allow DGMQ to continue to collect, in an expedited manner, information about the knowledge, attitudes, and behaviors of key audiences (such as refugees, immigrants, migrants, international travelers, travel industry partners, healthcare providers, non-profit agencies, customs brokers and forwarders, schools, state and local health departments) to help improve and inform these activities during both routine and emergency public health events. This generic OMB clearance will help DGMQ continue to refine these efforts in a timely manner, and will be especially valuable for communication activities that must occur quickly in response to public health emergencies.

DGMQ staff will use a variety of data collection methods for this proposed project: Interviews, focus groups,

surveys, and pre/post-tests. Depending on the research questions and audiences involved, data may be gathered in-person, by telephone, online, or using some combination of these formats. Data may be collected in quantitative and/or qualitative forms. Numerous audience variables will be assessed under the auspices of this generic OMB clearance. These include, but are not limited to, knowledge, attitudes, beliefs, behavioral intentions, practices, behaviors, skills, self-efficacy, and information needs and sources. Insights gained from evaluation research will assist in the development, refinement, implementation, and demonstration of outcomes and impact of communication, education, and training activities.

DGMQ estimates involvement of 37,500 respondents and 17,835 hours of burden for evaluation research activities each year. The collected information will not impose a cost burden on the respondents beyond that associated with their time to provide the required data.
