SUPPLEMENTARY INFORMATION:

Summary of Report

Warming oceans, rising seas and ocean acidification are impacting the marine life off of our coasts, disrupting

fisheries and local economies. These impacts are expected to increase with continued changes in the planet's climate and ocean systems. There is much at risk. For example, ocean-related fisheries generate \$200 billion in sales and support 1.7 million jobs nationally each year.¹

These current and possible future climate-related changes also affect NOAA's ability to fulfill its stewardship mandates for marine resources and the communities that depend on them. The goal of the draft Climate Science Strategy is to increase the production, delivery, and use of climate-related information to apprise and fulfill NMFS LMR stewardship mandates in a changing climate, including the Magnuson-Stevens Act, Endangered Species Act, Marine Mammal Protection Act, National Environmental Policy Act and others.

The draft Climate Science Strategy identifies seven key steps to improve the production and use of climate-related information to fulfill agency mandates and increase the resilience of marine resources and resource-dependent sectors and communities. The Strategy is designed to provide a nationally consistent framework to guide development and implementation of regional actions. The Strategy proposes specific near and medium-term recommendations, and identifies priority recommendations that are common across mandates, regions, objectives and living marine resources.

Implementation of the Strategy over the next five years is crucial for effective fulfillment of NMFS mission and mandates with changing climate and ocean conditions. Implementation of the Strategy will increase the production and delivery of climate-related information needed by NMFS and partners to reduce impacts and increase resilience of marine resources and the communities that depend on them.

NMFS works with and depends on many partners to fulfill its science and information needs from other federal agencies to academia, fisheries and other organizations. As such, we are providing this opportunity for broad public review and comment on the draft Strategy.
