

significantly during the year (e.g., due to a fundamental change in business strategy), this move would not be fully assessed until the next year-end. More frequent reporting would allow the Federal Reserve to better monitor the systemic footprint of individual firms as well as the collective systemic footprint of the largest banking organizations.

The increased frequency would simultaneously provide the market with additional data on the overall systemic footprint of an institution, allowing market participants to better project the potential future capital requirements for U.S. G-SIBs. The current international G-SIB standard involves a relative methodology, where the values of all of the firms are needed in order to calculate the scores. Thus, firms only have complete information about their surcharge once a year. This makes it difficult for firms to see the benefits of incremental improvements in their overall footprint throughout the year. By collecting the required data more frequently, firms would have additional information about their own systemic footprint vis-à-vis other respondents, and would be better positioned to predict individual assessment scores under the BCBS methodology.¹⁴

One consequence of moving to quarterly reporting is that the annual flow variables (i.e., payments and underwriting activity) would need to be reported over the previous four quarters. Furthermore, the values captured in Schedule A (Total exposures) would represent quarterly averages.

Glossary of Terms

Many items are unique to the FR Y-15 (e.g., payments and assets under custody). As such, there are certain terms that may have a different meaning in the context of the FR Y-15 or otherwise may not be found in other regulatory reports. To help ensure uniform interpretation of the instructions, the Federal Reserve proposes to introduce a new glossary of terms that would contain definitions relevant to the completion of the FR Y-15 report.

Memoranda Items

To improve the readability of the report, the Federal Reserve proposes relabeling certain items which are not included in the indicator calculations as memoranda items. This would allow related metrics to be grouped together on the same schedule.

Instructional Clarifications

The Federal Reserve proposes to incorporate instructional clarifications in response to feedback and questions received from banking organizations over the last two reporting periods. The Federal Reserve also proposes to integrate relevant definitional adjustments and clarifications that have been incorporated into the instructions for the international G-SIB assessment.¹⁵

Proposed Project

Project Title—Digital Media and Tobacco Outcomes Survey—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

The Centers for Disease Control and Prevention (CDC) requests a one-year OMB approval to conduct a web-based survey of smokers in the United States. This survey will be fielded for purposes of providing CDC with new, timely, and relevant information regarding the efficacy of the digital advertising component of the 2015 National Tobacco Prevention and Control Public Education Campaign (The Campaign). Specifically, CDC will evaluate associations between confirmed exposures to The Campaign's digital and social media advertising and self-reported knowledge, attitudes, beliefs about tobacco use, and smoking-related information-seeking behavior.

This information collection will consist of an online survey of

demographically similar comparison groups of Internet users who were exposed or not exposed to campaign advertising through digital and social media during the planned March–July 2015 campaign. Information will be collected about smokers' exposure to campaign digital advertisements and self-reported knowledge, attitudes, and beliefs related to smoking, and smoking-related information seeking. The survey will also measure behaviors related to smoking cessation and intentions to quit smoking. These data will be used to examine the statistical relationships between exposure to the digital campaign and changes in outcome variables of interest. This information collection fills current gaps in CDC's available data for evaluating the digital advertising components of The Campaign which, to date, have been limited to measures of ad reach and do not address digital campaign impacts on smoking-related knowledge, attitudes, and beliefs, intentions, and behaviors related to smoking cessation.

Data will be collected using the comScore Internet panel, a market research company that unobtrusively collects web behavior data on 1+ million U.S. Internet users to measure patterns in consumer behaviors online. As part of their participation, comScore panelists have previously agreed to download software on their computers that enables comScore to passively track their web behavior, including Web sites visited, searches they conduct, purchases they make, and ads that are delivered on sites visited, regardless of whether the ads are clicked or not. These data are then aggregated and weighted to provide estimates of consumer behaviors online. The panel is a convenience sample with panelists largely recruited via nonprobability-based sampling methods (e.g., online ads, partner Web sites). However, a subsample is recruited via random-digit-dialing to calibrate post-stratification weights that comScore uses to generate weighted demographic distributions that are similar to the U.S. Internet population. While our proposed analyses will also utilize such weights, all results will be interpreted in light of the sample source and direct claims of national representation will not be made.

Participation is voluntary and there are no costs to respondents other than their time. The total estimated annualized burden hours are 4,134.
