Abstract: Conservation banks are permanently protected lands that contain natural resource values, which are conserved and permanently managed for species that are endangered or threatened, candidates for listing as endangered or threatened, or are otherwise species at risk. The habitat preserved, restored, or established in conservation banks is used to offset adverse impacts to species that occurred elsewhere. We approve habitat or species credits that bank owners may sell in exchange for permanently protecting and managing habitat for these species. We began approving conservation banks in the early 1990s, and 132 banks have been approved as of January 2015 (including approved and sold-out banks).

The Service and the Department of the Interior's Office of Policy Analysis are conducting an analysis to identify potential institutional or other impediments to the habitat conservation banking program, and develop possible options for encouraging expanded use of the program. We plan to survey conservation bank sponsors and managers. The surveys will benefit the Service by helping to identify constraints in the current conservation banking program, and thus provide important information for developing recommendations for further expansion or perhaps changes to the program.

We will survey leaders and managers from the entire sample of entities sponsoring conservation banks. Two surveys will be used to obtain information from a corporate or organizational point of view, as well as information about the operation of individual banks. We plan to collect:

- (1) Background information on the bank(s).
- (2) Information about experience with the conservation banking program.
- (3) Perceptions of technical and institutional obstacles encountered in the conservation banking program.
- (4) Perceptions of incentives that would help foster successful banks.
