The patent rights in these inventions have been assigned and/or exclusively licensed to the government of the United States of America. The prospective exclusive license territory may be worldwide and the field of use may be limited to the use of Licensed Patent Rights for the following: "The development and commercialization of a therapeutic cancer vaccine specifically using Adeno-viral vectors." For avoidance of doubt, the field of use specifically excludes other viral vectors including but not limited to pox virus vectors, yeast based vectors and other

adjuvants and vectors that are not adeno-viral vectors.

**DATES:** Only written comments and/or applications for a license which are received by the NIH Office of Technology Transfer on or before June 3, 2016 will be considered.

**ADDRESSES:** Requests for copies of the patent application, inquiries, and comments relating to the contemplated exclusive license should be directed to: Sabarni K. Chatterjee, Ph.D., M.B.A. Senior Licensing and Patenting Manager, NCI Technology Transfer Center, 9609 Medical Center Drive, RM 1E530 MSC 9702, Bethesda, MD 20892-9702 (for business mail), Rockville, MD 20850-9702 Telephone: (240)-276-5530; Facsimile: (240)-276-5504E-mail: [chatterjeesa@mail.nih.gov](mailto:chatterjeesa@mail.nih.gov).

**SUPPLEMENTARY INFORMATION:** This invention concerns Brachyury, a master transcription factor that governs the epithelial-mesenchymal transition, was shown to be significantly overexpressed in primary and metastasizing tumors relative to normal human tissues. Stimulation of T cells with the Brachyury peptide promoted a robust immune response and the targeted lysis of invasive tumor cells. Brachyury overexpression has been demonstrated in a range of human tumors (breast, lung, colon and prostate, among others) suggesting that an immunotherapeutic product derived from this technology would be broadly applicable for the treatment of cancer.

The prospective exclusive license will be royalty bearing and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR part 404.7. The prospective exclusive license may be granted unless within fifteen (15) days from the date of this published notice, the NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR part 404.7.

Complete applications for a license in the prospective field of use that are filed in response to this notice will be treated as objections to the grant of the contemplated Exclusive Patent License Agreement. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Dated: May 13, 2016.
