Endangered and Threatened Wildlife and Plants; Recovery Plan for Four Species of the Santa Rosa Plain

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability.

SUMMARY: We, the U.S. Fish and Wildlife Service, announce the availability of the Recovery Plan for four plant species of the Santa Rosa Plain: The Sonoma sunshine, Burke's goldfields, the Sebastopol meadowfoam, and the Sonoma County Distinct Population Segment of the California Tiger Salamander. The recovery plan includes recovery objectives and criteria, and specific actions necessary to achieve removal of the species from the Federal Lists of Endangered and Threatened Wildlife and Plants.

ADDRESSES: You may obtain a copy of the recovery plan from our Web site at <http://www.fws.gov/endangered/species/recovery-plans.html>.

Alternatively, you may contact the Sacramento Fish and Wildlife Office, U.S. Fish and Wildlife Service, 2800 Cottage Way, Suite W-2605, Sacramento, CA 95825 (telephone 916-414-6700).

FOR FURTHER INFORMATION CONTACT: Jennifer Norris, Field Supervisor, at the above street address by telephone (see **ADDRESSES**).

SUPPLEMENTARY INFORMATION: We announce the availability of the Recovery Plan for the following four species of the Santa Rosa Plain:

- *Blennosperma bakeri* (Sonoma sunshine)
- *Lasthenia burkei* (Burke's goldfields)
- *Limnanthes vinculans* (Sebastopol meadowfoam)
- Sonoma County Distinct Population Segment of the California Tiger Salamander (*Ambystoma californiense*)

The recovery plan includes recovery objectives and criteria, and specific actions necessary to achieve removal of the species from the Federal Lists of Endangered and Threatened Wildlife and Plants.

Background

Recovery of endangered or threatened animals and plants to the point where they are again secure, self-sustaining members of their ecosystems is a

primary goal of our endangered species program and the Endangered Species Act of 1973, as amended (Act; 16 U.S.C. 1531 *et seq.*). Recovery means improvement of the status of listed species to the point at which listing is no longer appropriate under the criteria specified in section 4(a)(1) of the Act. The Act requires the development of recovery plans for listed species, unless such a plan would not promote the conservation of a particular species.

We listed *Blennosperma bakeri* (Sonoma sunshine), *Lasthenia burkei* (Burke's goldfields), and *Limnanthes vinculans* (Sebastopol meadowfoam) as endangered on December 2, 1991 (56 FR 61173). The present ranges of these species are predominantly located on the Santa Rosa Plain, which is located in central Sonoma County, bordered on the south and west by the Laguna de Santa Rosa, on the east by the Coast Range foothills, and on the north by the Russian River. However, the geographic area covered by this recovery plan includes all known locations of the species, some of which are outside of the Plain. They are annual plants that exist only in seasonal wetlands.

We listed the Sonoma County California tiger salamander, which we identified as a distinct population segment (DPS), as endangered on March 19, 2003 (68 FR 13498). The species is endemic to the Santa Rosa Plain. The Sonoma County California tiger salamander requires seasonal wetlands for breeding, and the surrounding uplands (upland habitat) for dispersal, feeding, growth, maturation, and maintenance of the juvenile and adult population.

The loss, degradation, and fragmentation of seasonal wetlands due to development have led to population declines for all four species. While ongoing agricultural practices have disturbed seasonal wetlands, certain agricultural practices, such as irrigated or grazed pasture, have protected habitat from intensive development and are compatible with persistence of these listed species. However, conversion of
