BILLING CODE 3720-58-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 40-9091; NRC-2011-0148]

Strata Energy, Inc.; Ross Uranium In Situ Recovery Facility; Source and Byproduct Materials License

AGENCY: Nuclear Regulatory Commission.

ACTION: Final environmental assessment and finding of no significant impact; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering an amendment of Source and Byproduct Materials License SUA-1601 to modify a License Condition for the Strata Energy, Inc. (Strata) Ross *In Situ* Recovery (ISR) Project. Specifically, Strata is requesting that NRC approve modifications to License Condition 11.3 (A) and (B) which pertain to requirements for the minimum density of baseline wells for a wellfield and distance to and spacing of the perimeter wells for a wellfield. The NRC has

prepared a final environmental assessment (EA) and finding of no significant impact (FONSI) for this licensing action.

DATES: The EA and FONSI referenced in this document are available on July 12, 2017.

ADDRESSES: Please refer to Docket ID NRC-2011-0148 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this document using any of the following methods:

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering amending License Condition 11.3 (A) and (B) of License SUA-1601 issued to Strata. As required by part 51 of title 10 of the *Code of Federal Regulations* (10 CFR), the NRC prepared a final EA (ADAMS Accession No. ML17191A371). Based on the results of the final EA, described as follows, the NRC has determined not to prepare an environmental impact

statement (EIS) for the amendment, and is issuing a FONSI.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would amend License Condition 11.3 (A) and (B) of Strata's Ross license. Strata's amendment request consists of modifying the minimum density requirement in a wellfield baseline monitoring program and the distance to and spacing of wells on the perimeter monitoring well ring (ADAMS Accession No. ML16004A032).

Need for the Proposed Action

The proposed action would allow Strata flexibility in the placement of wells to avoid certain natural features and infrastructure.

Environmental Impacts of the Proposed Action

The NRC assessed the environmental impacts to ground water as a result of amending License Condition 11.3 (A) and (B) and determined that there would be no significant impact to ground-water quality. The NRC determined the proposed changes to the License Condition—changes to well density requirements and distance to and spacing of wells in perimeter monitoring well ring—would still maintain Strata's ability to develop appropriate baseline and restoration data and continue the timely and accurate identification of ground-water excursions.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the NRC staff considered denial of the proposed action (*i.e.*, the "no-action" alternative). The No-Action Alternative would mean that the NRC would not approve the requested change to License Condition 11.3 (A) and (B). The No-Action alternative would result in Strata operating the Ross project as currently licensed, thus the impacts would be the same as those already considered in the Ross Supplemental EIS (ADAMS Accession No. ML14056A096).

Agencies and Persons Consulted

On June 14, 2017, the NRC staff sent a copy of the draft EA to the Wyoming Department of Environmental Quality (DEQ) for their review and comment. The state official responded on July 6, 2017, that DEQ had reviewed the EA and did not have any comments (ADAMS Accession No. ML17191A327).

III. Finding of No Significant Impact

Based on its review of the proposed action, and in accordance with the requirements in 10 CFR part 51, the NRC staff has determined that amending License Condition 11.3(A) and (B) for the Ross ISR project would not significantly affect ground-water quality. The NRC staff has determined that pursuant to 10 CFR 51.31, preparation of an EIS is not required for the proposed action and, pursuant to 10 CFR 51.32, a FONSI is appropriate.

On the basis of the final EA, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has determined not to prepare an EIS for the proposed action.

Dated at Rockville, Maryland, this 12th day of July 2017.

For the U.S. Nuclear Regulatory Commission.

Craig G. Erlanger,

Director, Division of Fuel Cycle Safety, Safeguards, and Environmental Review, Office of Nuclear Material Safety and Safeguards.
