

Calhoun Station, Unit No. 1 dated August 1972 as supplemented through the “Generic Environmental Impact Statement for License Renewal of Nuclear Plants: Fort Calhoun Station Unit 1—Final Report (NUREG-1437, Supplement 12).”

Agencies or Persons Consulted

The NRC staff did not enter into consultation with any other Federal agency or with the State of Nebraska regarding the environmental impact of the proposed action. On October 5, 2017, the Nebraska state representative was notified of this EA and FONSI.

III. Finding of No Significant Impact

The licensee has proposed exemptions from: (1) Certain requirements in 10 CFR 50.47(b) regarding onsite and offsite emergency response plans for nuclear power

reactors; (2) certain requirements in 10 CFR 50.47(c)(2) to establish plume exposure and ingestion pathway emergency planning zones for nuclear power reactors; and (3) certain requirements in 10 CFR part 50, appendix E, section IV, which establishes the elements that make up the content of a licensee’s emergency plan. The proposed action of granting these exemptions would eliminate the requirements for the licensee to maintain formal offsite radiological emergency plans, as described in 44 CFR part 350, and reduce some of the onsite EP activities at Fort Calhoun, based on the reduced risks at the permanently shutdown and defueled reactor. However, requirements for certain onsite capabilities to communicate and coordinate with offsite response authorities following declaration of an emergency at Fort

Calhoun will be retained and offsite “all hazards” EP provisions will still exist through State and local government use of a CEMP.

Consistent with 10 CFR 51.21, the NRC conducted the EA for the proposed action, which is included in Section II of this document, and incorporated by reference in this finding. On the basis of this EA, the NRC concludes that the proposed action will not have a significant effect on the quality of the human environment. Accordingly, the NRC has decided not to prepare an environmental impact statement for the proposed action.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, "Voluntary Reporting of Performance Indicators." The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on August 8, 2017, 82 FR 37132.

1. *The title of the information collection:* "Voluntary Reporting of Performance Indicators."
2. *OMB approval number:* 3150–0195.
3. *Type of submission:* Extension.
4. *The form number if applicable:* N/A.
5. *How often the collection is required or requested:* Quarterly.
6. *Who will be required or asked to respond:* Power reactor licensees.
7. *The estimated number of annual responses:* 376.
8. *The estimated number of annual respondents:* 94.
9. *An estimate of the total number of hours needed annually to comply with the information collection requirement or request:* The total reporting and recordkeeping burden is 76,350 hours (75,200 hours of reporting and 1,150 hours of recordkeeping).

10. *Abstract:* As part of a joint industry-NRC initiative, the NRC receives information submitted voluntarily by power reactor licensees regarding selected performance attributes known as performance indicators (PIs). Performance indicators are objective measures of the performance of licensee systems or programs. The NRC uses PI information and inspection results in its Reactor Oversight Process to make decisions about plant performance and regulatory response. Licensees transmit PIs electronically to reduce burden on themselves and the NRC.
