

(2) The Federal Government will rely upon State governments and their telecommunications management organizations for management or control of intrastate carrier services and continuity of interconnectivity with interstate carriers to assure that national objectives and priorities are properly served. Applicable regulations of the Federal Communications Commission govern the extent of the allocation of responsibility between Federal and State authorities for the management of NS/EP intrastate carrier services and the interconnectivity of intrastate services for NS/EP telecommunications functions.

(c) A system of telecommunications service priorities will be established which facilitates the provisioning and early restoration of services considered vital to national interests during those events or crises which warrant NS/EP treatment.

(d) The President is authorized during, or in anticipation of, an emergency or major disaster (as defined in the Disaster Relief Act of 1974) to establish temporary telecommunications systems and to make such telecommunications available to State and local government officials and such other persons as deemed appropriate (42 U.S.C. 5185).

(e) The President also is authorized, during war, when necessary in the interest of national defense and security, to direct or establish priorities for essential communications with any commercial or governmental carrier and to prevent obstruction of telecommunications. The President may also suspend or amend rules and regulations, close stations and facilities, and authorize U.S. government use and control of telecommunications resources with regard to:

(1) Radio communications (during war, or Presidentially declared threat of war, public peril, disaster or national emergency or a need to preserve the neutrality of the U.S.) and

(2) Wire communications (during war or threat of war).

(f) During an attack on the United States by an aggressor nation, and in an immediate postattack period, all decisions regarding the use of telecommunications resources will be di-

rected to the objective of national survival and recovery. In order to achieve this objective, postattack resources will be assigned to activities concerned with the maintenance and saving of lives, immediate military defense and response, and economic activities essential to continued economic survival and recovery.

(g) The Director of the Office of Science and Technology Policy will serve as the central authority to control, coordinate, and direct the activities of the Nation's telecommunications facilities, systems, and services during periods of wartime emergency as determined under section 706 of the Communications Act of 1934 (47 U.S.C. 606), as amended.

(h) Telecommunications resources of the Federal Government will be employed, as required, to best serve the continuity of government and national interests.

(i) Federal agencies will, in the development of emergency operational plans, minimize, to the extent feasible, dependence upon telecommunications services for continuity of essential operations.

PART 202—NATIONAL SECURITY AND EMERGENCY PREPAREDNESS PLANNING AND EXECUTION

§ 202.0 Objectives.

(a) During, or in anticipation of, a non-wartime emergency or natural disaster, a telecommunications capacity must exist to provide temporary telecommunications service to State and local government officials and other

persons deemed appropriate by the President.

(b) In the event of a general war and attack upon the Nation, a national telecommunications capability must exist that will support telecommunications requirements with respect to national security, survival and recovery. The development of survivable telecommunications to support essential functions (including an emergency broadcasting system), and technical compatibility of signaling methods, transmission modes, switching facilities, and terminal devices to permit exchange of communications over the surviving media of all systems, government or commercial, are crucial elements of such a national capability. In addition, a survivable national telecommunications management structure is necessary to manage initiation, coordination and restoration of telecommunications services. The management structure must include the following:

(1) Legal authority for telecommunications management.

(2) A control mechanism to manage the initiation, coordination and restoration of telecommunications services.

(3) Procedures to ensure timely damage assessment and allocation of residual resources and controlled restoration of services based on national policy/direction.

(4) The capability to execute a telecommunications recovery plan based on national policy/guidance.

(c) Notwithstanding any provision regarding NS/EP Planning and Execution, nothing in this part shall be deemed to affect the authorities or responsibilities of the Director of the Office of Management and Budget, or any Office or official thereof; or reassign any function assigned any agency under the Federal Property and Administrative Services Act of 1949, as amended, or under any other law, or any function vested by law in the Federal Communications Commission.

§ 202.1 Policies.

(a) The telecommunications resources of the Nation will be available for government use during crises and emergencies, wartime and non-war-

time, and to satisfy the needs of the public welfare and safety.

(b) The National Plan for Telecommunications Support in Non-War-time Emergencies provides procedures for planning and using National telecommunications assets and resources in support of non-wartime emergencies, including those covered by the Disaster Relief Act of 1974, in Presidentially declared Emergencies and Major Disasters, Extraordinary Situations, and other emergencies.

(c) An NS/EP Telecommunications Service Priority (TSP) System will provide procedures to authorize priority treatment for the provisioning and restoration of NS/EP telecommunications services for wartime and non-wartime emergencies.

(d) In wartime emergencies, facilities management will remain decentralized to the extent feasible to assure continued flexibility of operational response to critical needs, subject to the management direction and overriding authority of those officials delegated to act for and with the consent of the central point of authority within the Federal Government.

(1) Federally owned, leased, and/or operated telecommunications facilities, systems, and networks will be managed during such an emergency by the agency normally controlling the facility, system, or network except that all operations will be subject to the management direction and authority of the officials delegated overall management responsibility for Federal Government systems.

(2) Facilities other than those of the Federal Government, with the exception of radio stations in the Aviation Services and certain classes of radio stations in the Maritime Services, will be managed by the authorized common carrier or other person owning and operating such facilities subject to Federal Communications Commission (FCC) guidance and direction or in accordance with State or local plans if not subject to FCC jurisdiction.

(3) Radio stations in the Aviation Services and those aboard vessels in the Maritime Service will be subject to the control of the Secretary of Defense during a national emergency.
