

in high-cost support will be made by the Universal Service Administrative Company.

(g) Any reductions in high-cost support under this section will not be re-distributed to other carriers that receive support pursuant to §36.631 of this chapter.

(h) If, due to changes in local service rates, a local exchange carrier makes an updated rate filing pursuant to section 54.313(h)(2), the Universal Service Administrative Company will update the support reduction applied pursuant to paragraphs (b) and (f) of this section.

(i) For the purposes of this section and the reporting of rates pursuant to paragraph 313(h), rates for residential local service provided pursuant to measured or message rate plans or as part of a bundle of services should be calculated as follows:

(1) Rates for measured or message service shall be calculated by adding the basic rate for local service plus the additional charges incurred for measured service, using the mean number of minutes or message units for all customers subscribing to that rate plan multiplied by the applicable rate per minute or message unit. The local service rate includes additional charges for measured service only to the extent that the average number of units used by subscribers to that rate plan exceeds the number of units that are included in the plan. Where measured service plans have multiple rates for additional units, such as peak and off-peak rates, the calculation should reflect the average number of units that subscribers to the rate plan pay at each rate.

(2) For bundled service, the residential local service rate is the local service rate as tariffed, if applicable, or as itemized on end-user bills. If a carrier neither tariffs nor itemizes the local voice service rate on bills for bundled services, the local service rate is the rate of a similar stand-alone local voice service that it offers to consumers in that study area.
