

## § 202.0

### § 202.0 Objectives.

(a) During, or in anticipation of, a non-wartime emergency or natural disaster, a telecommunications capacity must exist to provide temporary telecommunications service to State and local government officials and other persons deemed appropriate by the President.

(b) In the event of a general war and attack upon the Nation, a national telecommunications capability must exist that will support telecommunications requirements with respect to national security, survival and recovery. The development of survivable telecommunications to support essential functions (including an emergency broadcasting system), and technical compatibility of signaling methods, transmission modes, switching facilities, and terminal devices to permit exchange of communications over the surviving media of all systems, government or commercial, are crucial elements of such a national capability. In addition, a survivable national telecommunications management structure is necessary to manage initiation, coordination and restoration of telecommunications services. The management structure must include the following:

(1) Legal authority for telecommunications management.

(2) A control mechanism to manage the initiation, coordination and restoration of telecommunications services.

(3) Procedures to ensure timely damage assessment and allocation of residual resources and controlled restoration of services based on national policy/direction.

(4) The capability to execute a telecommunications recovery plan based on national policy/guidance.

(c) Notwithstanding any provision regarding NS/EP Planning and Execution, nothing in this part shall be deemed to affect the authorities or responsibilities of the Director of the Office of Management and Budget, or any Office or official thereof; or reassign any function assigned any agency under the Federal Property and Administrative Services Act of 1949, as amended, or under any other law, or

## 47 CFR Ch. II (10–1–14 Edition)

any function vested by law in the Federal Communications Commission.

### § 202.1 Policies.

(a) The telecommunications resources of the Nation will be available for government use during crises and emergencies, wartime and non-wartime, and to satisfy the needs of the public welfare and safety.

(b) The National Plan for Telecommunications Support in Non-Wartime Emergencies provides procedures for planning and using National telecommunications assets and resources in support of non-wartime emergencies, including those covered by the Disaster Relief Act of 1974, in Presidentially declared Emergencies and Major Disasters, Extraordinary Situations, and other emergencies.

(c) An NS/EP Telecommunications Service Priority (TSP) System will provide procedures to authorize priority treatment for the provisioning and restoration of NS/EP telecommunications services for wartime and non-wartime emergencies.

(d) In wartime emergencies, facilities management will remain decentralized to the extent feasible to assure continued flexibility of operational response to critical needs, subject to the management direction and overriding authority of those officials delegated to act for and with the consent of the central point of authority within the Federal Government.

(1) Federally owned, leased, and/or operated telecommunications facilities, systems, and networks will be managed during such an emergency by the agency normally controlling the facility, system, or network except that all operations will be subject to the management direction and authority of the officials delegated overall management responsibility for Federal Government systems.

(2) Facilities other than those of the Federal Government, with the exception of radio stations in the Aviation Services and certain classes of radio stations in the Maritime Services, will be managed by the authorized common carrier or other person owning and operating such facilities subject to Federal Communications Commission
