<sup>1</sup> The power is measured at the transmitter output terminals and the type of power is determined according to the emission designator as follows:

(i) Mean power (pY) for amplitude modulated emissions and transmitting both sidebands using unmodulated full carrier.

## Federal Communications Commission

## § 87.133

- (ii) Peak envelope power ( $pX$ ) for all emission designators other than those referred to in paragraph (i) of this note.
- <sup>2</sup> Power and antenna height are restricted to the minimum necessary to achieve the required service.
- <sup>3</sup> Transmitter power may be increased to overcome line and duplexer losses but must not exceed 25 watts delivered to the antenna.
- <sup>4</sup> Frequency, emission, and maximum power will be determined after coordination with appropriate Government agencies.
- <sup>5</sup> To be used with airborne marine equipment certificated for part 80 (ship) and used in accordance with part 87.
- <sup>6</sup> Applicable only to marine frequencies used for public correspondence.
- <sup>7</sup> Frequency, emission, and maximum power will be determined by appropriate standards during the certification process.
- <sup>8</sup> Power may not exceed 60 watts per carrier, as measured at the input of the antenna subsystem, including any installed duplexer. The maximum EIRP may not exceed 2000 watts per carrier.
- <sup>9</sup> Excludes automatic link establishment.
- <sup>10</sup> Power is limited to 0.5 watt, but may not exceed 2 watts when station is used in an automatic unattended mode.

### § 87.133 Frequency stability.

(a) Except as provided in paragraphs (c), (d), (f), and (g) of this section, the carrier frequency of each station must be maintained within these tolerances:

Frequency band (lower limit exclusive, upper limit inclusive), and categories of stations	Tolerance <sup>1</sup>	Tolerance <sup>2</sup>
(1) Band-9 to 535 kHz: Aeronautical stations .....	100	100
Aircraft stations .....	200	100
Survival craft stations on 500 kHz.	5,000	20 Hz <sup>3</sup>
(2) Band-1605 to 4000 kHz: Aeronautical fixed stations: Power 200 W or less .....	100	100 <sup>8</sup>
Power above 200 W .....	50	50 <sup>8</sup>
Aeronautical stations: Power 200 W or less .....	100 <sup>7</sup>	100 <sup>7</sup> <sup>8</sup>

<sup>1</sup> This tolerance is the maximum permitted until January 1, 1990, for transmitters installed before January 2, 1985, and used at the same installation. Tolerance is indicated in parts in  $10^6$  unless shown as Hertz (Hz).

<sup>2</sup> This tolerance is the maximum permitted after January 1, 1985 for new and replacement transmitters and to all transmitters after January 1, 1990. Tolerance is indicated in parts in  $10^6$  unless shown as Hertz (Hz).

<sup>3</sup> For transmitters first approved after November 30, 1977.

<sup>4</sup> The tolerance for transmitters approved between January 1, 1966, and January 1, 1974, is 30 parts in  $10^6$ . The tolerance for transmitters approved after January 1, 1974, and stations using offset carrier techniques is 20 parts in  $10^6$ .

<sup>5</sup> The tolerance for transmitters approved after January 1, 1974, is 30 parts in  $10^6$ .  
<sup>6</sup> In the 5000 to 5250 MHz band, the FAA requires a tolerance of  $\pm 10$  kHz for Microwave Landing System stations which are to be a part of the National Airspace System (FAR 171).
