Needs and Uses: On October 25, 2002, the Commission released the *Fifth Report and Order*, In the Matter of Telecommunications Relay Services and the Americans with Disabilities Act of 1990, (*Report and Order*), CC Docket Nos. 90–571 and 98–67, FCC 02–269. The *Report and Order* has eliminated the coin sent-paid requirement and has encouraged specific outreach and education programs to inform Telecommunications Relay Services (TRS) users of their options when placing calls from payphones. Because the Commission concluded that it is infeasible to provide coin sent-paid toll relay service through payphones at this time, and the coin sent-paid toll functionality was not necessary to achieve functional equivalence, carriers no longer needed to provide coin sent-paid toll TRS calls from payphones. The *Report and Order* has required carriers to continue to provide coin sent-paid local calls free to TRS users. The *Report and Order* has also required carriers via the Industry Team to submit a one time report on the efforts industry has made to educate consumers on how to make toll coin sent-paid calls.

Form Number: Not applicable.

Type of Review: Revision of a currently approved collection.

Respondents: Business or other for-profit entities; Not-for-profit institutions; State, Local and Tribal Government.

Number of Respondents: 2,900.

Estimated Time per Response: 10 minutes—3 hours.

Needs and Uses: 47 CFR 73.1201(a) requires television broadcast licensees to make broadcast station identification announcements at the beginning and ending of each time of operation, and hourly, as close to the hour as feasible, at a natural break in program offerings. Television and Class A television broadcast stations may make these announcements visually or aurally. 47 CFR 73.1201(b) requires the licensees' station identification to consist of the station's call letters immediately followed by the community or communities specified in its license as the station's location. The name of the licensee, the station's frequency, the station's channel number, as stated on the station's license, and/or the station's network affiliation may be inserted between the call letters and station location. Digital Television (DTV) stations choosing to include the station's channel number in the station identification must use the station's major channel number and may distinguish multicast program streams. For example, a station with major channel number 26 may use 26.1 to identify a High Definition Television (HDTV) program service and 26.2 to identify a Standard Definition Television (SDTV) program service. No other insertion between the station's call letters and the community or communities specified in its license is permissible. 47 CFR 74.783(b) requires licensees of television translators whose station identification is made by the television station whose signals are being rebroadcast by the translator, must secure agreement with this television licensee to keep in its file, and available

to FCC personnel, the translator's call letters and location, giving the name, address and telephone number of the licensee or service representative to be contacted in the event of malfunction of the translator. 47 CFR 74.783(e) permits any low power television (LPTV) station to request a four-letter call sign after receiving its construction permit. All initial LPTV construction permits will continue to be issued with a five-character LPTV call sign. LPTV respondents are required to use the on-line electronic system. To enable these respondents to use this on-line system, the Commission eliminated the requirement that holders of LPTV construction permits submit with their call sign requests a certification that the station has been constructed, that physical construction is underway at the transmitter site, or that a firm equipment order has been placed. 47 CFR 74.1283(c)(1) requires FM translator stations whose station identification is made by the primary station to furnish current information on the translator's call letters and location. This information is kept in the primary station's files. This information is used to contact the translator licensee in the event of malfunction of the translator.
